100% Pass Quiz 2026 Palo Alto Networks Perfect PCCP Exam Topics

Our PCCP practice engine with passing rate up to 98 percent can build a surely system to elude any kind of loss of you and help you harvest success effortlessly. We are in dire to help you conquer any questions about PCCP training materials emerging during your review. If you want to be accepted as an indispensable member in your working condition, and obliterate opponents from a great distance, start by using our PCCP Exam Prep to pass the PCCP exam now.

Palo Alto Networks Certified Cybersecurity Practitioner Sample Questions (Q69-Q74):

NEW QUESTION # 69

Which methodology does Identity Threat Detection and Response (ITDR) use?

- A. Manual inspection of user activities
- B. Comparison of alerts to signatures
- C. Rule-based activity prioritization
- D. Behavior analysis

Answer: D

Explanation:

Identity Threat Detection and Response (ITDR) leverages behavior analysis to identify suspicious or anomalous activities associated with user identities. This methodology involves continuously monitoring user authentication patterns, access events, and privilege escalations to build a baseline of "normal" behavior. By detecting deviations-such as unusual login locations, timeframes, or excessive access attempts-ITDR can flag potential identity compromises or insider threats that traditional signature or rule-based systems often miss. Palo Alto Networks' ITDR integrates behavioral analytics with threat intelligence to deliver real-time alerts and automated response capabilities, essential in mitigating credential abuse and lateral movement within networks. This behavioral approach is crucial for adapting to sophisticated identity attacks that evolve constantly.

NEW QUESTION # 70

Which core component is used to implement a Zero Trust architecture?

- A. Web Application Zone
- B. VPN Concentrator
- C. Content Identification
- D. Segmentation Platform

Answer: D

Explanation:

"Remember that a trust zone is not intended to be a "pocket of trust" where systems (and therefore threats) within the zone can communicate freely and directly with each other. For a full Zero Trust implementation, the network would be configured to ensure that all communications traffic, including traffic between devices in the same zone, is intermediated by the corresponding Zero Trust Segmentation Platform."

NEW QUESTION # 71

Which of the following is a Routed Protocol?

- A. Transmission Control Protocol (TCP)
- B. Domain Name Service (DNS)
- C. Routing Information Protocol (RIP)
- D. Internet Protocol (IP)

Answer: D

Explanation:

A routed protocol is a protocol by which data can be routed. It provides appropriate addressing information in its internet layer or network layer to allow a packet to be forwarded from one network to another network.

Examples of routed protocols are the Internet Protocol (IP) and Internetwork Packet Exchange (IPX). IP is the most widely used routed protocol on the Internet and other networks. It assigns a unique logical address to each device and enables data to be fragmented, reassembled, and routed across multiple networks. References:

NEW QUESTION # 72

Which type of malware takes advantage of a vulnerability on an endpoint or server?

- A. technique
- **B. exploit**
- C. patch
- D. vulnerability

Answer: B

Explanation:

An exploit is a type of malware that takes advantage of a vulnerability on an endpoint or server to execute malicious code, gain unauthorized access, or perform other malicious actions. Exploits can be categorized into known and unknown (i.e., zero-day) exploits, depending on whether the vulnerability is publicly disclosed or not¹². Exploits can target various types of software, such as operating systems, browsers, applications, or network devices³. NEW QUESTION # 73

In which step of the cyber-attack lifecycle do hackers embed intruder code within seemingly innocuous files?

- A. exploitation
- B. reconnaissance
- C. delivery
- **D. weaponization**

Answer: D

Explanation:

"Weaponization: Next, attackers determine which methods to use to compromise a target endpoint. They may choose to embed intruder code within seemingly innocuous files such as a PDF or Microsoft Word document or email message."

NEW QUESTION # 74

.....

Palo Alto Networks PCCP exams play a significant role to verify skills, experience, and knowledge in a specific technology. Enrollment in the Palo Alto Networks Certified Cybersecurity Practitioner PCCP is open to everyone. Upon completion of Palo Alto Networks Certified Cybersecurity Practitioner PCCP Exam Questions' particular criteria.
