## ServiceNow CSA Reliable Test Pattern - Reliable CSA Exam Review

One of the advantages of taking the Pass4training ServiceNow Certified System Administrator (CSA) practice exam (desktop and web-based) is that it helps applicants to focus on their weak areas. It also helps applicants to track their progress and make improvements. ServiceNow CSA Practice Exams are particularly helpful in identifying areas where one needs more practice.

## ServiceNow Certified System Administrator Sample Questions (Q97-Q102):

### NEW QUESTION # 97

What occurs when an existing table is extended in ServiceNow?

- A. The parent table's Access Controls are ignored when determining access to the new table's records and fields.
- B. The new table inherits the functionality built into the parent table.**
- C. The new table does not inherit any of the fields from the parent table.
- D. You must script and configure all required behaviors.

**Answer: B**

### NEW QUESTION # 98

What are the steps for applying an update set to an instance?

- A. Retrieve, Assess, Apply
- B. Retrieve, Preview, Commit**
- C. Pull, Review, Push
- D. Specify, Transform, Apply
- E. Get, Test, Push

**Answer: B**

Explanation:

Reference: <https://docs.servicenow.com/bundle/rome-application-development/page/build/system-update-sets/hier-update-sets/concept/us-hier-overview.html#/us-hier-overview>

### NEW QUESTION # 99

Which is an example of when an application might use a Scheduled Script Execution (Scheduled Job)?

- A. To validate form input fields before a record is submitted.
- B. The application needs to run a client-side script at the same time every day.
- **C. The application needs to query the database every day to look for unassigned records.**
- D. To display a custom welcome message when a user logs in.

**Answer: C**

#### **NEW QUESTION # 100**

What process allows users to create, categorize, review approve and browse important information in a centralized location that is shared by the entire organization?

- A. Business Information Management
- B. Knowledge-Centered Management
- C. Self Service Management
- **D. Knowledge Management**
- E. Information Portal Management

**Answer: D**

Explanation:

Knowledge Management (KM) in ServiceNow is the process that enables users to create, categorize, review, approve, and browse important information in a centralized repository that is shared across the organization.

Key Features of Knowledge Management: Centralized knowledge base for storing important information.

Categorization and tagging for easy search and retrieval.

Approval workflows to ensure content accuracy.

Role-based access control (User Criteria) for managing visibility.

Integration with Self-Service and Service Catalog for user assistance.

Example Use Case: A company's IT support team documents solutions to common IT issues. Employees can search the Knowledge Base for solutions before opening a ticket, reducing the number of support requests.

A: Self-Service Management #Incorrect

Self-Service allows users to submit requests and incidents but does not manage knowledge articles systematically.

C: Knowledge-Centered Management #Incorrect

No such term as "Knowledge-Centered Management" in ServiceNow.

The correct industry term is Knowledge-Centered Service (KCS), but ServiceNow uses Knowledge Management (KM).

D: Information Portal Management #Incorrect

No such concept in ServiceNow; portals provide UI access but do not manage structured knowledge bases.

E: Business Information Management #Incorrect

Business Information Management (BIM) focuses on business data strategy, not knowledge sharing.

Why Other Options Are Incorrect?

Knowledge Management Overview

Creating and Managing Knowledge Articles

#### **NEW QUESTION # 101**

What are the main components of the Form Design interface? (Choose three.)

- **A. Form Layout**
- **B. Field Navigator**
- C. Field Picker
- D. Field Layout
- **E. Page Header**

**Answer: A,B,E**

Explanation:

The Form Designer in ServiceNow allows administrators to create, edit, and configure forms to control how records are displayed and interacted with in the system. It consists of three key components:

Page Header - This section contains controls such as "Save," "Undo," and "Redo." It allows users to manage their changes while designing forms. The Page Header also displays the name of the form being edited.

Field Navigator- This panel provides a categorized list of available fields that can be dragged and dropped onto the form layout. The fields are divided into different sections, such as "Available Fields" and "Existing Fields," helping users to manage the form's data structure effectively.

**Form Layout-** This is the central workspace where users design the form by arranging fields. Users can add new fields, move existing ones, and configure their properties. The layout determines how the form appears to end-users.
