Plat-Admn-202認定試験に合格することは他の世界の有名な認証に合格して国際の承認と受け入れを取ることと同じです。Plat-Admn-202認定試験もIT領域の幅広い認証を取得しました。世界各地でPlat-Admn-202試験に受かることを通じて自分のキャリアをもっと向上させる人々がたくさんいます。Tech4Examで、あなたは自分に向いている製品をどちらでも選べます。

## Salesforce Plat-Admn-202 認定試験の出題範囲：

トピック	出題範囲
トピック 1	<ul style="list-style-type: none"><li>• <b>Salesforce Fundamentals:</b> This section of the exam measures the skills of Salesforce Administrators and Junior Salesforce Consultants and covers the essential concepts needed to understand how Salesforce works at a foundational level. It focuses on recognizing when to use declarative tools versus programmatic customization, determining when AppExchange apps extend org capabilities, and understanding key methods for managing object, record, and field access. It also evaluates your ability to choose the right sharing model based on business needs and to apply reporting tools effectively, including report types and dashboards. Additionally, the domain reviews how to optimize the mobile experience through actions and layouts, and how Chatter can be used to support collaboration.</li></ul>
トピック 2	<ul style="list-style-type: none"><li>• <b>App Deployment:</b> This section of the exam measures the skills of Release Managers and Salesforce Administrators and covers the application lifecycle from planning through deployment. It requires determining the appropriate strategy when working with different sandboxes and managing milestones during development. Candidates must know when to use change sets and how to troubleshoot deployment issues. The section also includes understanding the implications of using unmanaged versus managed packages and selecting the correct deployment plan for various business scenarios.</li></ul>

トピック 3	<ul style="list-style-type: none"> <li>• <b>Business Logic and Process Automation:</b> This section of the exam measures the skills of Process Automation Specialists and Salesforce Administrators and covers the key tools Salesforce provides to automate and enforce business logic. It focuses on using formula fields, roll-up summary fields, and validation rules to meet defined requirements. Candidates must also understand approval processes and know how to select the right automation tool to prevent conflicts or errors. The domain emphasizes evaluating business requirements and recommending automation solutions that maintain system stability and accuracy.</li> </ul>
トピック 4	<ul style="list-style-type: none"> <li>• <b>Data Modeling and Management:</b> This section of the exam measures the skills of Data Analysts and Salesforce Administrators and covers the core principles of designing and maintaining Salesforce data structures. It requires selecting the correct data model in various scenarios and understanding relationship types and how they influence reporting, record access, and the user interface. It also tests knowledge of field data types and the operational impact of changing them. The section includes evaluating the use of Schema Builder and understanding the considerations involved in importing and exporting data across internal and external sources.</li> </ul>
トピック 5	<ul style="list-style-type: none"> <li>• <b>User Interface:</b> This section of the exam measures the skills of Salesforce UI Designers and Lightning App Builders and covers the ways in which Salesforce interfaces can be customized to improve usability. It includes understanding available options for UI customization and demonstrating when to apply custom buttons, links, and actions. The domain also distinguishes between declarative and programmatic methods for incorporating Lightning components in applications, ensuring that the right approach is selected for different user interface needs.</li> </ul>

## Salesforce Plat-Admn-202試験の準備方法 | ハイパスレートのPlat-Admn-202試験復習試験 | 認定するSalesforce Certified Platform App Builder復習過去問

長い間、Tech4Exam私たちSalesforceのPlat-Admn-202試験トレントは、重要な要素の使用に学生を引き付けるために常に高品質であり、高品質を保証するだけでなく、より良い教育方法を学生に提供し、同時にPlat-Admn-202実践教材は、より優れた教育効果をもたらします。また、ウェブ上のPlat-Admn-202試験問題の3つの異なるバージョンにより、高品質のSalesforce Certified Platform App Builder学習ガイドは、学生が自分の学習方法に適した選択方法を知るのに役立ち、Plat-Admn-202学習教材は非常に優れています 試験に合格するためのオプション。

### Salesforce Certified Platform App Builder 認定 Plat-Admn-202 試験問題 (Q202-Q207):

#### 質問 # 202

Universal Containers (UC) wants to test code against a subset of production data that is under 5 GB. Additionally, UC wants to refresh this sandbox every weekend.

Which type of sandbox should be used to accomplish this?

- A. Developer Pro
- B. Developer
- **C. Partial Copy**
- D. Full Copy

正解: C

解説:

To test code against a subset of production data under 5 GB and to refresh the sandbox environment weekly, the most suitable type of sandbox is:

Partial Copy (B). A Partial Copy sandbox includes a copy of your production org's metadata and a subset of your production data as defined by the sandbox template. It allows up to 5 GB of data and can be refreshed every 5 days, making it ideal for scenarios where a representative sample of production data is needed for testing without the storage and refresh limitations of a Full Copy

sandbox.

Developer Pro (A) and Developer (D) sandboxes also allow for testing and development but do not include a subset of production data—they either have no data or only limited sample data. A Full Copy sandbox (C) provides a full replica of production data, far exceeding the 5 GB requirement and generally is refreshed less frequently due to larger data volume and longer copy times.

Reference for sandbox types and their capabilities:

Sandbox Types and Templates: [https://help.salesforce.com/articleView?id=sf.data\\_sandbox\\_implementation\\_tips.htm&type=5](https://help.salesforce.com/articleView?id=sf.data_sandbox_implementation_tips.htm&type=5)

### 質問 # 203

The CFO of Cloud Kicks needs a way for new vendors to accept terms on agreements for any new major retail store lease before the opportunity can be closed.

Which feature should be used to handle this requirement?

- A. Dynamic Action
- B. Validation Rule
- C. Approval Process
- D. Email Alert

正解: C

解説:

An Approval Process is the appropriate feature to manage and enforce that new vendors accept terms on agreements before an opportunity can be closed. This process can be configured to require approvals from designated approvers when certain conditions are met, ensuring that all necessary agreements are in place and validated before proceeding.

A: Email Alert cannot enforce acceptance of terms.

B: Dynamic Action primarily adjusts the user interface based on field values, not process management.

### 質問 # 204

Cloud Kicks (CK) wants to track orders against inventory, ensuring its ability to fulfill order requests. CK created a junction object called Request Inventory to enable many-to-many relationships with the Inventory and Order objects.

What does the app builder need to provide to ensure users can view Request Inventory records?

- A. Sharing rules on Request Inventory object.
- B. Read access to both master objects.
- C. Read access to the first master object.
- D. Apex-based sharing on the first master object.

正解: B

解説:

To view a junction object record, a user must have at least read access to both master objects. This is because the junction object inherits the sharing and security settings from both master objects

### 質問 # 205

Ursa Major Solar (UMS) is planning to hire some new employees. UMS wants to allow a job candidate (Job\_Candidate\_\_c) to apply for multiple open positions (Open\_Position\_\_c) and then be able to view the applications (Application\_\_c) on the job candidate record. UMS also wants to view all the applications for a specific open position.

- A. Create a master-detail relationship field on Application\_\_c to Open\_Position\_\_c.
- B. Create a master-detail relationship field on Application\_\_c to Job\_Candidate\_\_c.
- C. Create a master-detail relationship field on Job\_Candidate\_\_c to Application\_\_c.
- D. Create a master-detail relationship on Open\_Position\_\_c to Application\_\_c.

正解: A、B

解説:

UMS wants each Application to connect both to a Job Candidate and an Open Position, where:

One Job Candidate can apply for multiple Open Positions.

One Open Position can receive multiple Applications. This is a many-to-many relationship, which in Salesforce is implemented by

using a junction object.

In this case, Application\_\_c serves as the junction object between Job\_Candidate\_\_c and Open\_Position\_\_c.

Exact Extract:

"To create a many-to-many relationship, create two master-detail relationships on the junction object. Each master-detail relationship links the junction object to one of the objects you want to relate." - Salesforce Help | Create a Many-to-Many Relationship Step 1: On Application\_\_c, create a Master-Detail relationship to Job\_Candidate\_\_c (Answer C).

Step 2: On Application\_\_c, create a Master-Detail relationship to Open\_Position\_\_c (Answer D).

This setup allows:

Viewing all Applications related to a given Job Candidate.

Viewing all Applications related to a given Open Position.

Exact Extract:

"A junction object is a custom object with two master-detail relationships, and it is the key to building many-to-many relationships between two objects." - Salesforce Help | Junction Object Concepts Reference (Salesforce Platform App Builder documentation / Study Guide topics):

Salesforce Help | Create a Many-to-Many Relationship

Salesforce Help | Junction Object Concepts

### 質問 # 206

Cloud Kicks (CK) keeps track of its shoe inventory in Salesforce. When an order's status is changed to Activated, the inventory for the ordered shoe is reduced. At that point, a SOAP web service on the CK website must be called so that the website is updated to display the correct inventory amount for the shoe.

What should an app builder use to communicate to the CK web service when a shoe's inventory has changed?

- A. After-Save Record-Triggered flow
- B. Workflow rule
- C. Before-Save Record-Triggered flow
- D. Process Builder

正解: A

解説:

To communicate to the CK web service when a shoe's inventory has changed, an app builder should use an after-save record-triggered flow. An after-save record-triggered flow is a type of flow that runs after a record is saved and can perform actions such as updating related records, sending emails, calling external services, etc. An after-save record-triggered flow can use an Apex action to invoke a SOAP web service using a WSDL file.
