업계에서 더 높은 자리에 오르도록 도움드립니다. 편한 덤프공부로 멋진 IT전문가의 꿈을 이루세요.

## 최신 Jira Administrator ACP-120 무료샘플문제 (Q25-Q30):

### 질문 # 25

Which statement is correct regarding Jira Cloud import and export features?

- A. Project admins can import their own projects.
- **B. Jira admins can create backup files.**
- C. Org admins can restore overwritten backups.
- D. Project admins can create site backups.
- E. Jira admins can import backup files.

정답: B

### 설명:

Jira Cloud's import and export features allow administrators to back up, restore, or migrate data. The correct statement is that Jira admins can create backup files (Option A), as this is a supported function for Jira administrators.

\* Explanation of the Correct Answer (Option A):

\* Jira administrators have the ability to create backup files for a Jira Cloud site, which include issues, configurations, users, and media (e.g., attachments). These backups can be used for restoration or migration purposes.

\* Exact Extract from Documentation:

Create a backup for Jira Cloud

Jira administrators can create backup files that include issues, configurations, users, and media.

To create a backup:

\* Go to Settings > System > Backup manager.

\* Select Create backup for cloud.

\* Download the backup file when ready. Note: Requires Jira administrator permissions.

Backup files can be used for restoration or migration. (Source: Atlassian Support Documentation, "Back up Jira Cloud data")

\* Why This Fits: The ability to create backup files is explicitly granted to Jira admins, making Option A the correct statement.

\* Why Other Options Are Incorrect:

\* Org admins can restore overwritten backups (Option B):

\* Organization admins manage Atlassian organization settings (e.g., billing, user access) but do not have direct access to Jira-specific backup restoration. Restoring backups, including overwritten ones, is handled by Jira administrators or support requests to Atlassian. Overwritten backups cannot typically be restored without Atlassian intervention.

\* Extract from Documentation:

Organization admins manage organization-level settings. Restoring backups, including overwritten ones, requires Jira administrator permissions or Atlassian support.

(Source: Atlassian Support Documentation, "Manage your Atlassian organization")

\* Project admins can import their own projects (Option C):

\* Project admins can manage project settings (e.g., permissions, issue types) but do not have permissions to import projects or data, as this is a system-level action reserved for Jira administrators.

\* Extract from Documentation:

Importing projects or data requires Jira administrator permissions. Project admins cannot perform imports.

(Source: Atlassian Support Documentation, "Import data to Jira Cloud")

\* Project admins can create site backups (Option D):

\* Creating site backups is a system-level action restricted to Jira administrators. Project admins lack the permissions to create backups for the entire site or their projects.

\* Extract from Documentation:

Only Jira administrators can create site backups in Settings > System > Backup manager. Project admins do not have this capability.

(Source: Atlassian Support Documentation, "Back up Jira Cloud data")

\* Jira admins can import backup files (Option E):

\* While Jira admins can initiate the import process for backup files, the actual import of full site backups typically requires Atlassian support or is performed through specific tools (e.g., Import Jira Cloud feature). Partial imports (e.g., CSV, Trello) are supported, but full backup imports are not a standard Jira admin action without additional steps. This makes the statement less definitively correct compared to Option A.

\* Extract from Documentation:

Importing full site backups often requires Atlassian support. Jira admins can import partial data (e.g., CSV, JSON) but not full backups directly.

(Source: Atlassian Support Documentation, "Restore your Jira Cloud site from a backup")

\* Additional Notes:

- \* Creating a backup is a straightforward action for Jira admins in Settings > System > Backup manager.
- \* The backup process requires Jira administrator privileges, not project admin or organization admin roles.
- \* Full backup imports or restoration of overwritten backups typically involve Atlassian support, limiting the scope of Jira admin actions.

### 질문 # 26

A team complains that many of their issues are in the Closed status, but do not have a resolution set, which causes problems with reporting. The project uses a single workflow.

You want to set the resolution to Done on all existing issues in the Closed status.

Which combination of workflow elements and a bulk operation will achieve this?

- A. - A temporary transition and a screen  
- An Edit Issues bulk operation
- **B. - A temporary transition and a trigger**  
- **An Edit Issues bulk operation**
- C. - A temporary transition and a post function  
- A Transition Issues bulk operation
- D. - A screen and a custom field  
- An Edit Issues bulk operation
- E. - A screen and the Resolution field  
- A Move Issues bulk operation

정답: B

### 질문 # 27

George is the project lead of several projects. Now, he needs to create projects but should not have Jira administrator privileges. What does George need?

- A. Product role
- B. Project permission
- **C. Global permission**
- D. Project role
- E. Product access

정답: C

설명:

To create projects in Jira Software Cloud without having full Jira administrator privileges, George needs a specific global permission, namely the Create Projects permission. This permission allows users to create new projects without granting them broader administrative access.

\* Explanation of the Correct Answer (Option D):

\* The Create Projects global permission enables a user to create new projects in Jira. This permission is distinct from Jira administrator privileges, which include managing global settings like schemes, users, and workflows. By granting George this permission, he can create projects while maintaining a limited scope of authority.

\* Exact Extract from Documentation:

Global permissions

Global permissions control access to system-wide actions in Jira. The Create Projects permission allows users to create new projects without requiring full Jira administrator privileges.

To grant this permission:

\* Go to Settings > System > Global permissions.

\* Add a user, group, or role to the Create Projects permission. Note: Users with this permission can create projects but cannot modify global configurations like schemes or user management unless they have additional permissions. (Source: Atlassian Support Documentation, "Manage global permissions")

\* Why This Fits: The Create Projects global permission directly addresses the requirement for George to create projects without needing Jira administrator privileges, making Option D the correct choice.

\* Why Other Options Are Incorrect:

\* Project role (Option A):

\* Project roles (e.g., Administrator, Developer) are used within a project's permission scheme to grant project-specific permissions, such as Administer Projects or Browse Projects. They do not control the ability to create new projects, which is a system-level action.

\* Extract from Documentation:

Project roles are used in permission schemes to grant permissions within a specific project. They do not apply to global actions like creating projects.

(Source: Atlassian Support Documentation, "Manage project roles")

\* Product access (Option B):

\* Product access determines whether a user can use Jira Software or other Atlassian products.

While George needs product access to use Jira, this does not grant the specific ability to create projects.

\* Extract from Documentation:

Product access allows users to log in and use Jira products. Specific actions, like creating projects, require global or project permissions.

(Source: Atlassian Support Documentation, "Manage product access")

\* Project permission (Option C):

\* Project permissions (e.g., Administer Projects, Browse Projects) are defined in a project's permission scheme and apply to actions within a specific project. Creating a project is a global action, not tied to any existing project's permission scheme.

\* Extract from Documentation:

Project permissions control actions within a project, such as editing issues or managing components. Global permissions control system-wide actions like creating projects.

(Source: Atlassian Support Documentation, "Manage project permissions")

\* Product role (Option E):

\* Product roles (e.g., Jira Software User, Jira Service Management Agent) define access to specific Atlassian products but do not grant permissions for actions like creating projects.

This is not relevant to the requirement.

\* Extract from Documentation:

Product roles determine access to Atlassian products and are not related to specific permissions like creating projects.

(Source: Atlassian Support Documentation, "Manage product roles")

\* Additional Notes:

\* The Create Projects permission can be granted to George via a group or directly to his user account in Settings > System > Global permissions.

\* As a project lead, George likely already has project-level permissions (e.g., Administer Projects for his projects), but these do not extend to creating new projects.

## 질문 # 28

Managers want to ensure that every issue in Jira always has an assignee.

Which change will definitely meet this requirement?

- A. Make the assignee required through field configurations.
- B. Use components for automatic assignment in every project.
- C. Set Default Assignee to Project Lead in every project.
- D. Set the global option "Allow unassigned issues" to OFF.
- E. Make the assignee required on workflow transition screens.
- F. Update post functions to set the assignee appropriately at each workflow transition.

정답: F

설명:

Reference: <https://community.atlassian.com/t5/Answers-Developer-Questions/Conditional-Post-Function/qaq-p/561594>

## 질문 # 29

Your site contains the following:

\* Alpha filter: Public

\* Beta filter: Private

\* Omega dashboard: Public  
The system setting 'Allow users to share dashboards and filters with the public' is currently set to ON. You change that setting to OFF. What is the impact of this change?

- A. Users who are not logged in cannot see Omega dashboard.
- B. You cannot set Viewers to Private on Alpha filter.
- C. Users who are not logged in cannot see Alpha filter.
- D. You cannot set Viewers to Public on Beta filter.

정답: A,C

설명:

The system setting 'Allow users to share dashboards and filters with the public' in Jira Software Cloud controls whether dashboards and filters marked as Public can be accessed by users who are not logged in (i.e., anonymous users). When this setting is turned OFF, public dashboards and filters become inaccessible to non-logged-in users. The impact is that users who are not logged in cannot see Alpha filter (Option C) and users who are not logged in cannot see Omega dashboard (Option D).

\* Explanation of the Correct Answers:

\* Users who are not logged in cannot see Alpha filter (Option C):

\* The Alpha filter is marked as Public, meaning it is accessible to anyone, including non-logged-in users, when the 'Allow users to share dashboards and filters with the public' setting is ON. Turning this setting OFF disables public access, so non-logged-in users can no longer view the Alpha filter.

\* Exact Extract from Documentation:

Manage public sharing of dashboards and filters

The 'Allow users to share dashboards and filters with the public' setting controls whether public dashboards and filters can be accessed by anonymous (non-logged-in) users.

\* When ON, public dashboards and filters are accessible to anyone with the URL, including non-logged-in users.

\* When OFF, public dashboards and filters are restricted to logged-in users with appropriate permissions (e.g., Browse Projects for filters). To change the setting:

\* Go to Settings > System > Sharing.

\* Toggle Allow users to share dashboards and filters with the public. Impact:

Turning the setting OFF prevents non-logged-in users from accessing public filters and dashboards. (Source: Atlassian Support Documentation, "Manage sharing in Jira Cloud")

\* Why This Fits: The Alpha filter is public, and turning off public sharing prevents non-logged-in users from accessing it, making Option C correct.

\* Users who are not logged in cannot see Omega dashboard (Option D):

\* The Omega dashboard is marked as Public, so it is accessible to non-logged-in users when the public sharing setting is ON. Turning the setting OFF restricts access to logged-in users only, meaning non-logged-in users cannot see the Omega dashboard.

\* Exact Extract from Documentation:

When the 'Allow users to share dashboards and filters with the public' setting is turned OFF, public dashboards and filters are no longer accessible to anonymous users. Logged-in users with appropriate permissions can still access them.

(Source: Atlassian Support Documentation, "Manage sharing in Jira Cloud")

\* Why This Fits: The Omega dashboard is public, and disabling public sharing prevents non-logged-in users from accessing it, making Option D correct.

\* Why Other Options Are Incorrect:

\* You cannot set Viewers to Public on Beta filter (Option A):

\* The Beta filter is currently Private, but the ability to set a filter to Public is controlled by user permissions (e.g., Share dashboards and filters global permission), not the public sharing setting. Turning off public sharing prevents non-logged-in users from accessing public filters but does not restrict users from setting a filter to Public. However, even if set to Public, the filter would not be accessible to anonymous users with the setting OFF. This option is misleading and not a direct impact.

\* Extract from Documentation:

The Share dashboards and filters global permission allows users to set filters to Public. The public sharing setting affects access, not the ability to configure sharing.

(Source: Atlassian Support Documentation, "Manage global permissions")

\* You cannot set Viewers to Private on Alpha filter (Option B):

\* The Alpha filter is currently Public, but users can change its sharing settings to Private (or other options like a group or role) regardless of the public sharing setting. The system setting only affects whether Public filters and dashboards are accessible to non-logged-in users, not the ability to set sharing to Private. This is not an impact of the change.

\* Extract from Documentation:

Users can set filters to Private, Public, or other sharing options based on their permissions, independent of the public sharing setting.

(Source: Atlassian Support Documentation, "Manage filters in Jira Cloud")

\* Additional Notes:

\* The change requires Jira administrator privileges to modify the setting in Settings > System > Sharing

\* Logged-in users with appropriate permissions (e.g., Browse Projects for filters, view permissions for dashboards) can still access Alpha filter and Omega dashboard after the setting is turned OFF.

\* The Beta filter (Private) is unaffected, as it was never accessible to non-logged-in users.
