#### 問題 #150

Identify a machine in the network with SSH service enabled. Initiate an SSH Connection to the machine, find the file, ttag.txt. in the machine, and enter the file's content as the answer. The credentials for SSH login are sam/adm(admin@123. {Practical Question)

- A. bob2@sam
- B. sam2@bob
- C. bobt@sam
- D. sam@bob

答案： C

解題說明：

bob1@sam is the file's content as the answer. To find the machine with SSH service enabled, one can use a network scanning tool such as Nmap to scan the network for port 22, which is the default port for SSH. For example, the command `nmap -p 22 192.168.0.0/24` will scan the network range 192.168.0.0/24 for port 22 and display the results<sup>2</sup>. To initiate an SSH connection to the machine, one can use a command-line tool such as ssh or an SSH client such as PuTTY to connect to the machine using the credentials sam/admin@123. For example, the command `ssh sam@192.168.0.10` will connect to the machine with IP address 192.168.0.10 using the username sam and prompt for the password admin@1233. To find the file flag.txt in the machine, one can use a file searching tool such as find or locate to search for the file name in the machine's file system. For example, the command `find / -name flag.txt` will search for the file flag.txt from the root directory (/) and display its location<sup>4</sup>. To enter the file's content as the answer, one can use a file viewing tool such as cat or less to display the content of the file flag.txt. For example, the command `cat /home/sam/flag.txt` will display the content of the file flag.txt located in /home/sam/ directory<sup>5</sup>. ### 問題 #152

Tristan, a professional penetration tester, was recruited by an organization to test its network infrastructure. The organization wanted to understand its current security posture and its strength in defending against external threats. For this purpose, the organization did not provide any information about their IT infrastructure to Tristan. Thus, Tristan initiated zero-knowledge attacks, with no information or assistance from the organization. Which of the following types of penetration testing has Tristan initiated in the above scenario?

- **A. Black-box testing**
- B. Gray-box testing
- C. Translucent-box testing
- D. White-box testing

答案： A

解題說明：

Black-box testing is a type of penetration testing where the tester has no prior knowledge of the target system or network and initiates zero-knowledge attacks, with no information or assistance from the organization.

Black-box testing simulates the perspective of an external attacker who tries to find and exploit vulnerabilities without any insider information. Black-box testing can help identify unknown or hidden vulnerabilities that may not be detected by other types of testing. However, black-box testing can also be time-consuming, costly, and incomplete, as it depends on the tester's skills and tools.
