Salesforce Certified Sharing and Visibility Architect Sample Questions (Q16-Q21):

NEW QUESTION # 16

Universal Container has a set of Account management users that should only see accounts once the account becomes a customer.

The type field on the Account identifies whether the account is a prospect, customer, partner, or other. Which two methods could an Architect use to enable this sharing requirement, assuming a private sharing model for accounts? Choose two:

- A. Create an account sharing rule that shares all accounts owned by sales to be shared with account management roles and subordinates
- **B. Institute a business process that calls for the account manager to be added to the account team once the account becomes a customer**
- **C. Create a criteria-based sharing rule that shares the account to the account management group when the type is customer**
- D. Create a public list view, where accounts of type customer are included and share the list view with account management public group

Answer: B,C

NEW QUESTION # 17

Universal Containers has set the Org-Wide Sharing Default for Accounts to Private and has created some sharing rules to extend access based on certain data access policies. An architect has been asked to review access to a certain set of key customer accounts. How might this review be conducted?

- A. Use the Sharing button on each customer Account.
- **B. Export the Account Share table and review.**
- C. Log in as each user and Run the All Accounts List View.
- D. Run a Report on Sharing in the Admin Console.

Answer: B

Explanation:

Explanation

The best way to review access to a certain set of key customer accounts is to export the Account Share table and review it. The Account Share table stores all the sharing records that grant access to accounts, including manual sharing, sharing rules, team sharing, and implicit sharing⁴. The other options are either not feasible or not comprehensive.

NEW QUESTION # 18

Mary is Joe's manager in the Role Hierarchy. The organization-wide default for a custom Invoice object is Public Read-Only, and Mary's profile is not granted the Read permission for the Invoice object. Which action can Mary take on Joe's invoice records?

- A. View Only
- B. Read/Write
- **C. None**

Answer: C

Explanation:

Even though Mary is Joe's manager in the Role Hierarchy, the lack of Read permission for the Invoice object on Mary's profile prevents her from viewing Joe's invoice records. Salesforce enforces object-level permissions, which override sharing rules, OWD settings, and role hierarchy. Without the Read permission on the Invoice object, Mary cannot access the records, even with Public Read-Only OWD or Role Hierarchy privileges.

NEW QUESTION # 19

Jane, a support representative at Universal Containers, created a report to view all her open cases that have been created in the past 7 days and saved the report in the "Private Reports" folder.

Who can view and run the report?

- A. The report owner and anybody in the role hierarchy above the report owner
- B. The report owner and any users who have been given access to the "My Private Reports" folder
- C. The report owner and users with the "View All Data" permission

- **D. The report owner**

Answer: D

NEW QUESTION # 20

Users at Universal Containers are complaining that a field has disappeared from the Account page after deploying its latest project. The page layout has not changes with this deployment. How should the admin troubleshoot this issue?

- **A. View Field Accessibility in the Object Manager**
- B. Log in as user and check several Accounts to isolate the problem records.
- C. Run a Who Sees What report, filtering on Account.
- D. Review change to Account record types.

Answer: A

Explanation:

Explanation

The best way to troubleshoot this issue is to view Field Accessibility in the Object Manager. This will allow the admin to see how the field-level security settings affect the visibility of the field for different profiles and record types. The other options are not helpful, because:

Reviewing changes to Account record types will not show why a field has disappeared from the Account page, unless the field is dependent on a record type that has been deactivated or modified.

Logging in as user and checking several Accounts will not isolate the problem records, because the issue is related to field visibility, not record access.

Running a Who Sees What report will not help, because this report only shows how sharing settings affect record access, not field visibility.

NEW QUESTION # 21
