# 100% Pass Quiz 2026 High Pass-Rate 2V0-11.25: New VMware Cloud Foundation 5.2 Administrator Exam Answers

Are you upset for your 2V0-11.25 exam test? When you find 2V0-11.25 valid test cram, your stress may be relieved and you may have methods to do the next preparation for 2V0-11.25 actual exam. The VMware 2V0-11.25 correct questions & answers are the latest and constantly updated in accordance with the changing of the Real 2V0-11.25 Exam, which will ensure you solve all the problem in the actual test. You will pass your 2V0-11.25 test at first attempt with ease.

We offer three different formats for preparing for the VMware 2V0-11.25 exam questions, all of which will ensure your definite success on your VMware Cloud Foundation 5.2 Administrator (2V0-11.25) exam dumps. TorrentExam is there with updated 2V0-11.25 Questions so you can pass the VMware Cloud Foundation 5.2 Administrator (2V0-11.25) exam and move toward the new era of technology with full ease and confidence.

2V0-11.25 Online Exam - 2V0-11.25 Exam Format

We have a lasting and sustainable cooperation with customers who are willing to purchase our 2V0-11.25 actual exam. We try our best to renovate and update our 2V0-11.25 study materials in order to help you fill the knowledge gap during your learning process, thus increasing your confidence and success rate. At the same time, 2V0-11.25 Preparation baindumps can keep pace with the digitized world by providing timely application. You will never fell disappointed with our 2V0-11.25 exam quiz.

VMware 2V0-11.25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Plan and Design the VMware by Broadcom Solution: There are no testable objectives in this section. Still, it is intended for solution architects who need to plan and design VMware Cloud Foundation deployments, focusing on sizing, architecture selection, and network • storage design.
Topic 2	• Troubleshoot and Optimize the VMware by Broadcom Solution: This section of the exam measures skills of the cloud infrastructure support engineer and covers diagnosing and resolving technical issues related to VMware Cloud Foundation deployment and operations. It includes troubleshooting the deployment process, vSphere, networking, vSAN, SDDC Manager, and Aria Suite. The section also evaluates the ability to optimize infrastructure performance, manage resources, and ensure efficient operation, focusing on the practical aspects of maintaining and enhancing VMware Cloud Foundation environments.

Topic 3	• IT Architectures, Technologies, Standards: There are no testable objectives in this section. However, this area establishes the foundational knowledge expected of cloud administrators, such as understanding basic IT infrastructure, virtualization, and cloud models. This section is relevant for cloud administrators and infrastructure engineers.
Topic 4	• VMware by Broadcom Solution: This section of the exam measures skills of the cloud administrator and covers identifying VMware Cloud Foundation components like vSphere, vSAN, and NSX, as well as their architecture, including stretched configurations. It also assesses knowledge of requirements for implementing private cloud solutions, use cases for VMware Aria Suite components, vSphere IaaS control plane, Data Services Manager, and VMware Cloud Foundation Add-Ons. The focus is on the ability to recognize and apply the correct VMware solutions for various enterprise scenarios.
Topic 5	• Install, Configure, Administrate the VMware by Broadcom Solution: This section of the exam measures skills of the VMware Cloud Foundation administrator and covers the installation and configuration processes for VMware Cloud Foundation components, deploying and configuring management domains, NSX Edge Clusters, and the VMware Aria Suite Lifecycle. It assesses the ability to deploy workload domains, enable vSphere IaaS control plane, create vSphere namespaces, manage stretched clusters, and use VMware Cloud Foundation APIs. Candidates are also tested on scaling deployments, performing Day 2 operations like backup, recovery, lifecycle management, VM lifecycle management, configuring networking and storage, managing ESXi hosts, implementing encryption, and operationalizing VMware NSX, vSAN, and Aria Suite. The section is comprehensive, targeting those responsible for the ongoing administration and optimization of VMware environments.

VMware Cloud Foundation 5.2 Administrator Sample Questions (Q161-Q166):

NEW QUESTION # 161

A host in a vSphere environment needs to be taken offline for hardware maintenance. An administrator needs to put the host in maintenance mode without causing VM downtime.
What three steps should the administrator follow? (Choose three.)

- A. Select the "Fractional data migration" option
- B. Verify that no VMs are running on the host before maintenance
- C. Ensure that the host is not part of a vSphere HA cluster
- D. Select the host and enter maintenance mode from the vSphere Client
- E. Migrate all VMs off the host using vMotion

Answer: C,D,E

Explanation:
Using vMotion to migrate all virtual machines off the host ensures that there is no downtime for the VMs during the maintenance process.
The administrator should then select the host and initiate maintenance mode from the vSphere Client to begin the maintenance process.
Ensuring the host is not part of a vSphere HA cluster before maintenance is important to avoid triggering unnecessary VM restarts or failovers during the process.

NEW QUESTION # 162

Which tool is most appropriate for analyzing detailed network performance metrics in a vSphere environment?

- A. vSphere Client
- B. vSAN Health Service
- C. Aria Operations
- D. vSphere CLI

Answer: C

Explanation:

Aria Operations (formerly vRealize Operations) is the most appropriate tool for analyzing detailed network performance metrics in a vSphere environment. It provides comprehensive monitoring, analytics, and performance management, including network performance metrics across the vSphere infrastructure.

NEW QUESTION # 163
What option should be selected when placing a vSAN host into maintenance mode to ensure that all data remains accessible throughout the maintenance process while also minimizing the duration of the operation?

- A. Ensure Accessibility
- B. Full Data Migration
- C. No Data Migration
- D. Ensure Data Accessibility

Answer: A

Explanation:
According to theVMware Cloud Foundation 5.2 Administration GuideandvSAN Official Documentation, when placing a vSAN host into maintenance mode, there are several options available for handling data. The correct option toensure all data remains accessible and to minimize the duration of the operationis:
B). Ensure Accessibility
Exact Extract from official documentation:
"Ensure Accessibility - This is the default and recommended option for most maintenance activities. When selected, vSAN makes sure that data is available and accessible even if the host is offline, by migrating only the data necessary to maintain availability. This option ensures minimal data movement and the fastest maintenance mode operation, while still protecting data accessibility." (Source: VMware vSAN Administration Guide) Why Not the Other Options?
A). Ensure Data Accessibility:This is not a documented vSAN maintenance mode option. The correct option is
"Ensure Accessibility."
C). Full Data Migration:This option migrates all data from the host, which increases the time required for maintenance.
D). No Data Migration:This option does not guarantee data accessibility if the host is offline.
Summary:
To ensure all data remains accessible and to minimize the maintenance window, selectEnsure Accessibility (B) when placing a vSAN host into maintenance mode, as specified in the official VMware documentation.

NEW QUESTION # 164
What is a symptom of an issue with vSphere HA?

- A. Hosts frequently disconnect from vCenter Server.
- B. VMs are not being migrated using vMotion.
- C. VMs are not restarted after a host failure.
- D. Snapshots cannot be created or consolidated.

Answer: C

NEW QUESTION # 165
What are three prerequisites for deploying an NSX Edge cluster in a VMware Cloud Foundation (VCF) solution? (Choose three.)

- A. Set upvSAN storage policies for the Edge VMs.
- B. Use separate VLAN IDs and subnets forthe NSX host overlay and NSX Edge overlay networks.
- C. Create DNS entries for the NSX Edge nodes.
- D. Install Aria Operations and enable Edge Cluster monitoring.
- E. Verify that the NSX host overlay VLAN and NSX Edge overlay VLAN are routed to each other.
- F. Configure BGP as a dynamic routing protocol on the physical switches.

Answer: B,C,E

Explanation:
The NSX host overlay VLAN and NSX Edge overlay VLAN must be routed to each other so Edge nodes can establish overlay

tunnels with transport nodes.

DNS A records for each NSX Edge node are required for name resolution during deployment and operation.

NSX requires distinct VLAN IDs and subnets for the host overlay network (transport nodes) and the Edge overlay network to segregate traffic and avoid IP space conflicts.
