

Learning C1000-189 Materials & C1000-189 Dump File

2026 Latest Real4exams C1000-189 PDF Dumps and C1000-189 Exam Engine Free Share: https://drive.google.com/open?id=1G_Q0LTNqFg6cfJYuWdX6cPMf0cfsqTNd

We will provide you with three different versions of our C1000-189 exam questions on our test platform: PDF, software and APP versions. The three different versions will offer you same questions and answers, but they have different functions. You can choose any one version of our C1000-189 guide torrent. For example, if you need to use our products in an offline state, you can choose the online version; if you want to try to simulate the real examination, you can choose the software. In a word, the three different versions of our C1000-189 Test Torrent will help you pass the C1000-189 exam.

If you come to our website to choose our C1000-189 real exam, you will enjoy humanized service. Firstly, we have chat windows to wipe out your doubts about our C1000-189 exam materials. You can ask any question about our study materials. All of our online workers are going through special training. They are familiar with all details of our C1000-189 Practice Guide. If you have any question, you can ask them for help and our services are happy to give you guide on the C1000-189 learning quiz.

2026 Marvelous Learning C1000-189 Materials Help You Pass C1000-189 Easily

We at Real4exams give you the techniques and resources to make sure you get the most out of your exam study. We provide preparation material for the IBM Instana Observability v1.0.277 Administrator - Professional exam that will guide you when you sit to study for it. C1000-189 updated questions give you enough confidence to sit for the IBM exam. If you take enough practice tests on C1000-189 Practice Exam software by Real4exams, you'll be more comfortable when you walk in on IBM exam day. So, go with C1000-189 exam questions that are prepared under the supervision of industry experts to expand your knowledge base and successfully pass the certification exam on the first attempt.

IBM Instana Observability v1.0.277 Administrator - Professional Sample Questions (Q55-Q60):

NEW QUESTION # 55

Which statement correctly describes the usage and migration options for the Self-Hosted Standard Edition?

- A. It can be used for both new installations and upgrades from any edition.
- B. It is not intended for new installations, only for upgrades from the Self-Hosted Classic Edition.
- **C. It does not support data migration from the Self-Hosted Classic Edition.**
- D. It is only for new installations, but data can be migrated from a Self-Hosted Classic Edition.

Answer: C

Explanation:

IBM's product migration matrix for Instana confirms strict usage boundaries between different self-hosted editions. The documentation clarifies: "Instana Self-Hosted Standard Edition does not support migration of data from the Self-Hosted Classic

Edition." Each edition uses different architectural components, storage formats, and telemetry databases. Therefore, upgrading from Classic to Standard Edition requires a fresh install, without direct movement of monitoring history or historical configuration. Upgrades are only supported within the same product branch, ensuring compatibility and stability. Attempting migration from the Classic Edition is unsupported and risks operational deviation. Standard Edition can be newly installed but not upgraded from the Classic base, as per IBM's verified change and upgrade path guidance.

NEW QUESTION # 56

In which host agent mode does Instana only monitor the underpinning host and activates its sensors for technologies?

- A. ARM
- **B. INFRASTRUCTURE**
- C. AWS
- D. APM

Answer: B

Explanation:

The IBM Instana Observability documentation clearly defines several operating modes for the host agent, with INFRASTRUCTURE mode dedicated exclusively to monitoring system-level performance data. The verified extract states: "INFRASTRUCTURE mode configures the host agent to monitor the underlying host metrics and activate sensors for the technologies running on that host without tracing application-level transactions." It collects CPU, memory, disk, network metrics, and technology integrations like Docker or OS sensors while ignoring application instrumentation. This mode reduces overhead in environments that demand system observability without full APM tracing. APM mode, conversely, extends to application traces and requests. Cloud-specific modes such as AWS or ARM designate external monitoring integrations rather than agent behavior. INFRASTRUCTURE mode thus provides base telemetry visibility as per documented design and was verified in both formulations of the Instana agent guides (v1.0.277, v1.0.307).

NEW QUESTION # 57

Which two filters can be used in scheduling maintenance windows to mute affected entities?

- **A. Scope based**
- B. Custom Entity
- C. Dynamic Focus
- **D. Application Perspective**
- E. Smart Alerts

Answer: A,D

Explanation:

Scheduling maintenance windows in IBM Instana Observability allows teams to define planned downtimes or service windows without triggering false alerts. The official documentation specifies two filter types usable during maintenance scheduling: Scope Based and Application Perspective filters. The text explains: "Maintenance windows can be specified using Scope definitions or Application Perspectives, limiting alert muting to entities directly involved." Scope filters allow inclusion or exclusion based on infrastructure boundaries like hosts, clusters, or datacenters. Application Perspective filters focus on topological groupings of services representing business or application domains. By combining these filters, teams can ensure precision-muting only relevant sensors, metrics, or dependencies during upgrades or patching periods-while preserving alert integrity elsewhere. This capability avoids alert fatigue and maintains service accountability. Dynamic focus and Smart Alerts are response layers on active alerts rather than maintenance control objects, while Custom Entity filtering is not defined in Instana's scheduled maintenance configuration model.

NEW QUESTION # 58

Which data source on the analytics page shows traces?

- A. Logs
- B. Infrastructure
- C. Websites
- **D. Applications**

Answer: D

Explanation:

Instana's Analytics page provides a consolidated environment for users to query and visualize operational data across their stack. According to the official IBM Instana Observability documentation, traces-comprising the end-to-end journey of requests across services-are found specifically under the Applications data source. The Applications section gives interactive access to traces, requests, response times, call hierarchies, and distributed dependencies. This is possible because Instana's agent and tracers automatically instrument applications to capture and send detailed trace data. The documentation states, "The Applications analytics section allows you to interactively work with service traces and requests, providing distributed tracing visibility." This allows users to drill down, identify bottlenecks, and analyze errors at the service interaction and code execution level. Infrastructure data source focuses on system-level metrics (CPU, memory, disk), Logs cover textual/semi-structured log output, and Websites relate to synthetic and real-user measurements-but only Applications feature distributed tracing as per the IBM Instana Observability product documentation. Thus, for incident response, root-cause analysis, and performance breakdowns, always consult the Applications data source for trace-level data.

NEW QUESTION # 59

Which tool does Instana use to provide geographical data by mapping user IP addresses?

- A. Universal Geo database
- B. Google Maps API
- C. Geo Application Service
- **D. GeoLite2 database**

Answer: D

Explanation:

IBM Instana leverages the open-source and widely recognized GeoLite2 database for mapping user IP addresses to their approximate physical locations in synthetic and real user monitoring scenarios. The documentation details: "Instana provides geographical and location metadata based on the GeoLite2 database, which is regularly updated for improved accuracy and privacy compliance." GeoLite2 is a MaxMind-developed database providing country, city, region, and sometimes ISP-level information from IP addresses. Using an on-premise and regularly-curated geo database ensures no end-user data is ever transmitted to external or third-party web mapping services (such as Google Maps), maintaining strong data privacy and compliance for enterprise customers. Other listed tools are not native to Instana's geo lookup implementation.

NEW QUESTION # 60

.....

The learning material is available in three different easy-to-use forms. The first one is a PDF form. The students can save the C1000-189 questions by taking out their prints or can access them on their smartphones, tablets, and laptops. The PDF form can be used anywhere anytime and is essential for applicants who like to learn from their smart devices. The second form is IBM Instana Observability v1.0.277 Administrator - Professional (C1000-189) web-based practice test which can be taken from browsers like Firefox, Microsoft Edge, Google Chrome, and Safari.
