Take advantage of its portability and printability, allowing you to practice on the go and in your free time. Rest assured that our SAP C-CPI-2506 Exam Questions are regularly updated to cover all the latest changes in the exam syllabus.

SAP Certified Associate - Integration Developer Sample Questions (Q21-Q26):

NEW QUESTION # 21

You want to implement a synchronous call to a remote HTTP API as an integration flow component. Which adapter can you use?

- A. SFTP
- B. Mail
- C. AMQP
- D. OData

Answer: D

Explanation:

You can use an OData adapter to implement a synchronous call to a remote HTTP API as an integration flow component. An OData adapter allows you to send and receive messages using the OData protocol. OData stands for Open Data Protocol and is a standard for exposing and consuming data over HTTP or HTTPS. You can use an OData adapter to communicate with OData services that support CRUD (Create, Read, Update, Delete) operations on resources. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 22

You have created an API provider of the type Internet. What http response code indicates success?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

The http response code that indicates success is 200. The 200 response code means that the request was successfully processed and the response contains the expected data. Other response codes in the 2xx range also indicate success, but with some variations. For example, 201 means that a resource was created, 202 means that a request was accepted but not completed yet, and 204 means that there is no content in the response. NEW QUESTION # 23

Which messaging patterns does SAP Event Mesh support for asynchronous communication?

- A. Request/reply messaging and multicast messaging
- B. Publish/subscribe and point-to-point messaging
- C. Point-to-point and multicast messaging
- D. Publish/subscribe and request/reply messaging

Answer: B

Explanation:

SAP Event Mesh supports two key asynchronous messaging patterns:

Publish/Subscribe # Producers publish an event once, multiple subscribers consume independently.

Point-to-Point (Queue-based) # Messages sent from one producer to a single consumer via a queue.

Other options are incorrect:

Request/Reply # Synchronous pattern, not the focus of Event Mesh.

Multicast messaging # Not explicitly supported; handled through Pub-Sub.

Thus, Event Mesh supports Publish/Subscribe and Point-to-Point messaging patterns.

NEW QUESTION # 24

You have set up a basic authentication policy, but the API proxy returns an HTTP status of 401.What could be a reason?

- A. In the AssignMessage policy, the Assign To tag has the type="request"
- B. In the AssignMessage policy, the Assign To tag has the type="response"

- C. In the AssignMessage policy, the Assign To tag has the type="postFlow"
- D. In the AssignMessage policy, the Assign To tag has the type="preFlow"

Answer: A

Explanation:
In API Management (SAP Integration Suite), when implementing Basic Authentication policies:
If the AssignMessage policy does not correctly assign credentials to the request message, authentication will fail.
This results in HTTP 401 Unauthorized.
Other tags like preFlow, postFlow, response are policy flow phases, but the credentials must be applied to the request for proper authentication.
Thus, the root cause is when the Assign To = request is missing/misconfigured.

NEW QUESTION # 25
What are target endpoints of an API? Note: There are 3 correct answers to this question.

- A. API consumer
- B. URL of original API
- C. API provider
- D. Resources
- E. API proxy

Answer: B,C,E

Explanation:
he target endpoints of an API are the API provider, the API proxy, and the URL of the original API. The API provider is the system or application that exposes the interface and functionality of the API. The API proxy is the intermediary component that mediates the requests and responses between the API consumer and the API provider. The URL of the original API is the address that identifies the location and resource of the API.
