- B. internal initialization calculate formulas calculate quantities Price Waterfall Calculation on Initialization Before Calculate On Calculate After Calculate
- C. internal initialization on Initialization calculate formulas Before Calculate calculate quantities On Calculate Price Waterfall Calculation After Calculate
- D. internal initialization on Initialization Before Calculate calculate quantities On Calculate Price Waterfall Calculation After Calculate calculate formulas

**Answer: C**

### NEW QUESTION # 50

What are three reasons to establish a governance structure as part of your Revenue Cloud project?

- A. To ensure the implementation team can work independently for most of the project with little to no input from the customer
- B. To get agreement on the roles and responsibilities of the implementation team and customer
- C. To assign more work for the customer when it comes to designing and building the Revenue Cloud solution
- D. To establish a communication plan between the implementation team, the customer and the work is coordinated between them
- E. To ensure the implementation team is aligned with the customer on assigned work.

**Answer: B,D,E**

Explanation:

The reasons for establishing a governance structure as part of your Revenue Cloud project include:

B: To establish a communication plan between the implementation team, the customer, and the work is coordinated between them. This is essential to ensure clear and ongoing communication throughout the project, aligning all stakeholders towards common goals and facilitating timely resolution of issues.

D: To get agreement on the roles and responsibilities of the implementation team and customer: Defining roles and responsibilities helps in setting clear expectations, distributing tasks, and accountability which are critical for the organized progression of the project.

E: To ensure the implementation team is aligned with the customer on assigned work: Alignment on the assigned work ensures that both the implementation team and the customer have a mutual understanding of project objectives, deliverables, and expectations, leading to a smoother project flow and reducing the likelihood of misunderstandings and reworks.

These aspects are derived from the standard practices and objectives in implementing complex IT projects like Salesforce Revenue Cloud, where coordination, clear communication, and defined responsibilities are fundamental for success.

### NEW QUESTION # 51

How does Hold Billing work?

- A. It suspends invoicing for that order product until the field is set to "no", Invoices lines will be created only for invoices after hold billing was set to "yes".
- B. It Prevents invoice document generation and stops email notifications from going out to the customer.
- C. It suspends invoicing for that order product until the field is set to "no", Invoices lines will be created to account for the time when hold billing was set to "yes"
- D. The Hold Billing field is set to "yes" until the order is activated. Upon order activation the field will be automatically set to "no".

**Answer: C**

### NEW QUESTION # 52

You are implementing the Design Document for a large Enterprise Revenue Cloud project having multiple lookup price rules

supporting a complex pricing requirement in the Build phase. During construction the customer discovers additional logic and external data stores that need to be incorporated in order to achieve the correct pricing in a particular set of use cases. You estimate the lookup price rules will need to be modified, additional rules will need to be created and API development will be needed. As an Implementation consultant what is the appropriate course of action that should take in this predicament?

- A. Gather more details, if it requires a low level of effort then implement immediately before starting the next sprint, Otherwise Complete on the subsequent sprint.
- B. Consult with the solution Architect first who will expedite the updates to the design documents, then implement the changes immediately.
- **C. Communicate these changes to the project manager who will evaluate the impact to scope, timeline and budget then determine the next course of action**
- D. Implement the lookup price rules immediately then review with the solution Architect.
- E. Communication to the customer ongoing adjustment can be made as long as we're in the build phase.

**Answer: C**

### NEW QUESTION # 53

Sales reps at UC were facing governor limits while configuring certain large bundles, the admin at UC has set the 'enable large configurations package settings to TRUE now the users are experiencing longer loading times between saving a bundle configuration and returning to the quote line editor, even for smaller bundles. What should the admin do to resolve this issue?

- A. Enable large configurations setting should not be used in such a case
- B. All bundles that have more than 20 product should be split into smaller bundles
- C. Recommend CPQ and billing design solutions within proper capabilities
- **D. Enable Large configuration on the bundle parents where needed by selecting the product's enable large configuration field**

**Answer: D**

Explanation:

\* **Enable Large Configurations on Specific Bundles:** Instead of enabling large configurations globally for all bundles, consider selectively enabling it only on the bundle parents where it is needed. By doing so, you can avoid affecting smaller bundles that don't require large configurations. This approach allows you to optimize performance while still benefiting from large configurations where necessary.

\* **Review CPQ and Billing Design Solutions:** Take a closer look at your CPQ and billing design. Ensure that your configuration models, pricing rules, and quote line editor settings are well-optimized.

Sometimes, design choices can impact performance. Consider consulting Salesforce documentation and best practices to fine-tune your implementation.

\* **Avoid Unnecessary Use of Large Configurations:** While large configurations can handle complex bundles, they may not be needed for smaller bundles with fewer products. Evaluate each bundle's complexity and enable large configurations only when necessary. Avoid using it indiscriminately across all bundles.
