If you still have dreams and never give up, you just need our C_S4TM_2023 actual test guide to broaden your horizons and enrich your experience you can enjoy the first-class after sales service. Whenever you have questions about our C_S4TM_2023 Actual Test guide, you will get satisfied answers from our online workers through email. We are responsible for all customers. All of our C_S4TM_2023 question materials are going through strict inspection. The quality completely has no problem. The good chance will slip away if you still hesitate.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition - Transportation Management Sample Questions (Q56-Q61):

NEW QUESTION # 56

You are planning to use Package Builder to estimate freight volume more accurately for better capacity planning. On what criteria can you base the definition of the package type assignment? Note: There are 2 correct answers to this question.

- A. Handling unit type
- B. Business partner
- C. Shipping location
- D. Shipping type

Answer: B,C

Explanation:

In SAP S/4HANA Transportation Management, the Package Builder is used to estimate freight volume by assigning package types to goods for more accurate capacity planning. According to the SAP documentation, the package type assignment can be based on:

* Business partner (B): Package types can be assigned based on the business partner (e.g., shipper or consignee), as different partners may have specific packaging requirements.

* Shipping location (D): The location from which goods are shipped (e.g., warehouse or plant) can influence package type assignments, as different locations may use distinct packaging standards.

The other options are incorrect:

* Handling unit type (A) is managed in SAP Extended Warehouse Management (EWM) or during execution, not directly in the Package Builder for planning purposes.

* Shipping type (C) refers to the mode of transport (e.g., road, rail) but is not a criterion for package type assignment in the Package Builder.

NEW QUESTION # 57

Which of the following incompatibility types can you use in the Automatic and Manual Planning incompatibility area?

Note: There are 2 correct answers to this question.

- A. Carrier - Transportation order
- B. Transportation request header - Transportation request header
- C. Vehicle resource - Location (stay level)
- D. Freight unit - Freight booking

Answer: C,D

NEW QUESTION # 58

Over fifty predefined condition types are used in the following:

There are 3 correct answers to this question.

- A. Document type determination
- B. destination locations are stored on item level
- C. Organizational unit determination
- D. Incompatibilities

Answer: A,C,D

NEW QUESTION # 59

How can you limit the number of columns that are displayed in a forwarding order worklist?

- A. Define a new view

- B. Apply a filter
- **C. Define a new page layout**
- D. Define a new query

Answer: C

Explanation:

Transportation Management Overview and Fundamentals

NEW QUESTION # 60

In an embedded transportation management implementation, what are some possible predecessor documents to a freight order?

Note: There are 2 correct answers to this question.

- A. Sales order
- B. Shipment
- **C. Freight unit**
- **D. Order-based transportation requirement**

Answer: C,D

Explanation:

In an embedded SAP S/4HANA Transportation Management implementation, freight orders are created as part of the transportation execution process, typically based on predecessor documents. According to the SAP documentation:

* Order-based transportation requirement (A): This document is created from sales orders, purchase orders, or stock transport orders and serves as a predecessor to freight units and freight orders, defining the transportation demand.

* Freight unit (C): Freight units are created from order-based or delivery-based transportation requirements and are direct predecessors to freight orders, as they represent the logistical units of goods that are assigned to freight orders for execution.

The other options are incorrect:

* Sales order (B) triggers the creation of an order-based transportation requirement but is not a direct predecessor to the freight order.

* Shipment (D) is a concept from SAP ERP (LE-TRA) and is not used in SAP S/4HANA TM, where freight orders replace shipments.
