## **ANSC 4395 EXAM 3 QUESTIONS AND 100% CORRECT ANSWERS**

### ANSC 4395 Exam 3

what is a simply inherited trait

trait affected by one or only a few genes

what is a polygenic trait

trait controlled by two or more genes

polygenic traits are described as...

numbers

polygenic traits are greatly influenced by.....

environment

-Lack of feed

-Heat/cold stress

-Training of quarter horses (speed)

the more genes involved the \_\_\_\_\_ it is to determine their effects

harder

what are test matings

mating designed to reveal the genotype of an individual for a small number of loci (designed to reveal the genotype of a simply inherited trait)

what are the three types of test matings?

mating to recessive

mating to heterozygous

mating a sire to daughters

the probability of a heterozygous male having normal offspring.....

diminishes rapidly as the number of mating increases

As we all know, the world does not have two identical leaves. People's tastes also vary a lot. So we have tried our best to develop the three packages for you to choose. Now we have free demo of the C\_SEC\_2405 study materials, which can print on papers and make notes. Then windows software of the C\_SEC\_2405 Exam Questions, which needs to install on windows software. Also online engine of the C\_SEC\_2405 study materials, which is convenient because it doesn't need to install on computers.

## **SAP C\_SEC\_2405 Exam Syllabus Topics:**

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>SAP Fiori Authorizations and SAP S</li><li>4HANA: This section of the exam measures the skills of SAP Developers and covers authorization management specific to SAP Fiori applications within SAP S</li><li>4HANA. It emphasizes configuring authorizations for Fiori apps to ensure appropriate access levels. A key skill assessed is understanding Fiori authorization concepts to enhance user experience.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>User Administration: This section of the exam measures the skills of SAP Administrators and covers user administration tasks within SAP systems. It includes managing user accounts, roles, and profiles efficiently. A critical skill evaluated is maintaining accurate user records to support security and compliance efforts.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>Authorization and Role Maintenance: This section of the exam measures the skills of SAP administrators and covers the management of user authorizations and roles within SAP systems. It emphasizes the processes involved in defining, maintaining, and approving roles to ensure secure access. A key skill assessed is managing role authorizations effectively to mitigate access risks.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Infrastructure Security and Authentication: This section of the exam measures the skills of SAP IT Professionals and covers infrastructure security measures and authentication methods used in SAP environments. It emphasizes protecting systems from unauthorized access and ensuring secure user authentication.</li> </ul>

## C\_SEC\_2405 Exam Engine & C\_SEC\_2405 Actual Exam Dumps

Learn for your SAP C\_SEC\_2405 certification with confidence by utilizing the Dumpcollection C\_SEC\_2405 study guide, which is always forward-thinking, convenient, current, and dependable. If you are still unsure whether to pursue Dumpcollection C\_SEC\_2405 Exam Questions for SAP Certified Associate - Security Administrator certification exam preparation, you are losing the game at the first stage in a fiercely competitive marketplace. Dumpcollection C\_SEC\_2405 questions are the best option.

### SAP Certified Associate - Security Administrator Sample Questions (Q81-Q86):

#### NEW QUESTION # 81

Which of the blowing functions within SAP GRC Access Control support access certification and review?

Note: There are 2 correct answers to the question.

- A. Role Ream
- B. GO
- C. Role Review
- D. Review CI User Reaffirm

**Answer: C,D**

Explanation:

Within SAP GRC Access Control, these functions support access certification and periodic reviews to ensure that only authorized users retain access to critical systems and roles.

\* Review CI User Reaffirm (C): This function facilitates user access reviews, ensuring that existing user access aligns with current business needs and compliance requirements.

\* Role Review (D): This feature allows administrators to periodically review and validate the relevance and assignment of roles to users. Any unnecessary or unauthorized roles can be removed or adjusted.

#### NEW QUESTION # 82

In SAP HANA Cloud, who has access to a database object?

- A. The user DBADMIN and the group owner
- B. The user SYSTEM and the creator
- C. The creator and the schema owner
- D. The owner and the SAP-owned users

**Answer: C**

Explanation:

In SAP HANA Cloud, access to a database object is granted to the creator and the schema owner. The creator, typically the user who created the object (e.g., a table or view), is automatically granted full privileges on that object, allowing them to manage and manipulate it. The schema owner, who owns the schema in which the object resides, also has access, as they have overarching control over all objects within their schema. This dual ownership model ensures that both the user responsible for creating the object and the schema's administrator can manage it, supporting flexible and secure database administration. The user DBADMIN, group owner, SAP-owned users, or SYSTEM user may have specific administrative privileges, but they are not automatically granted access to all database objects unless explicitly configured. This approach aligns with SAP HANA Cloud's security framework, ensuring that object access is tightly controlled and aligned with the principles of least privilege and ownership-based access management.

### NEW QUESTION # 83

Which optional components can be included when transporting a role definition from the development system to the quality assurance system? Note: There are 3 correct answers to this question.

- A. Generated profiles of dependent roles
- B. Direct user assignments
- C. Generated profiles of single roles
- D. Personalization data
- E. Indirect user assignments

**Answer: B,C,D**

Explanation:

When transporting a role definition from the development system to the quality assurance system in SAP, optional components that can be included are Direct user assignments, Generated profiles of single roles, and Personalization data. Direct user assignments link specific users to the role, allowing these assignments to be transported for testing purposes, though this is typically avoided in production to maintain centralized user management. Generated profiles of single roles, which contain the authorization data for the role, are included to ensure the role's permissions are correctly tested in the target system. Personalization data, such as user-specific settings or preferences, can also be transported to preserve role-specific configurations. Generated profiles of dependent roles are not typically included, as they relate to composite roles, and Indirect user assignments are managed separately, often via organizational structures. These optional components provide flexibility in role transport, ensuring that the quality assurance system accurately reflects the development environment while supporting secure and efficient role testing.

### NEW QUESTION # 84

To connect to data sources that are NOT all based on OData, which of the following options does SAP recommend you use?

- A. SAP Process Integration
- B. Cloud connector
- C. SAP Integration Suite
- D. OData Provisioning service

**Answer: C**

Explanation:

For connecting to data sources that are not exclusively based on OData, SAP recommends using the SAP Integration Suite. This comprehensive platform supports a wide range of integration scenarios, including OData, REST, SOAP, and other protocols, making it ideal for connecting diverse data sources, whether on-premise or cloud-based. The SAP Integration Suite provides tools for data mapping, transformation, and orchestration, ensuring seamless and secure data exchange across heterogeneous systems. In contrast, the OData Provisioning service is specifically designed for OData-based integrations, limiting its applicability to non-OData sources. The Cloud connector facilitates secure connectivity between SAP BTP and on-premise systems but is not a complete integration solution. SAP Process Integration, while used for integration in older SAP landscapes, lacks the flexibility and cloud-native capabilities of the SAP Integration Suite. By leveraging the SAP Integration Suite, organizations can achieve robust, scalable, and secure integrations, aligning with SAP's modern integration strategy for complex, multi-protocol environments.

### NEW QUESTION # 85

Under which of the following conditions can you merge authorizations for the same object during role maintenance? Note: There are 2 correct answers to this question.

- A. The activation status of a manual authorization must match the status of the changed authorizations.
- B. The maintenance status of the changed authorizations must match the status of a manual authorization.
- C. The activation status and the maintenance status of the authorizations must match.
- D. The activation status and the maintenance status of the authorizations must NOT match.

**Answer: A,C**

### Explanation:

During role maintenance in SAP systems, merging authorizations for the same object is possible under specific conditions to streamline role management. The activation status of a manual authorization must match the status of the changed authorizations, ensuring consistency in how authorizations are applied within the role. Additionally, both the activation status and the maintenance status of the authorizations must align, meaning that the authorizations being merged should be in the same state (e.g., active or inactive) and maintenance phase (e.g., standard or changed). These conditions prevent conflicts and ensure that merged authorizations function correctly within the role, maintaining security and compliance. Mismatches in status or non-alignment of maintenance states can lead to errors or unintended access restrictions.

## NEW QUESTION # 86

The community has a lot of talent, people constantly improve their own knowledge to reach a higher level. But the country's demand for high-end IT staff is still expanding, internationally as well. So many people want to pass SAP C\_SEC\_2405 certification exam. But it is not easy to pass the exam. However, in fact, as long as you choose a good training materials to pass the exam is not impossible. We Dumpcollection SAP C\_SEC\_2405 Exam Training materials in full possession of the ability to help you through the certification. Dumpcollection website training materials are proved by many candidates, and has been far ahead in the international arena. If you want to through SAP C\_SEC\_2405 certification exam, add the Dumpcollection SAP C\_SEC\_2405 exam training to Shopping Cart quickly!
