APMG-International ISO-IEC-27001-Foundation試験勉強書: いい加減 ISO-IEC-27001-Foundation試験合格攻略

ISO-IEC-27001-Foundationの無料デモでは、世界で発生している最新のポイントを追跡できるように、APMG-International1年間で無料で更新できます。ISO-IEC-27001-Foundation試験トレントの試験の質問は多かれ少なかれ白熱した問題に関係しており、Topexam試験の準備をするお客様は終日試験のトレースを保持するのに十分な時間がない必要があるため、当社のISO-IEC-27001-Foundation模擬試験は役立ちますあなたがあなたが無視したホットポイントを補うための助けになるツールとして。したがって、ISO/IEC 27001 (2022) Foundation Exam試験に合格する自信が増し、確実にISO-IEC-27001-Foundation試験に合格する率が上がります。

APMG-International ISO/IEC 27001 (2022) Foundation Exam 認定 ISO-IEC-27001-Foundation 試験問題 (Q28-Q33):

質問 # 28

In which clause would the requirements for internal audit be found?

- A. Planning
- B. Operation
- C. Improvement
- **D. Performance Evaluation**

正解: D

解説:

The requirements for internal audit are explicitly placed in Clause 9.2 (Performance Evaluation) of ISO/IEC 27001:2022. The standard requires:

* "The organization shall conduct internal audits at planned intervals to provide information on whether the information security management system... conforms to the organization's own requirements... and to the requirements of this document." (9.2.1)

* "The organization shall plan, establish, implement and maintain an audit programme(s)..." (9.2.2) This clause clearly falls under Performance Evaluation (Clause 9), not Planning (Clause 6), Operation (Clause 8), or Improvement (Clause 10). Therefore, the correct answer is C.

質問 # 29

Identify the missing word in the following sentence.

According to ISO/IEC 27000, the definition of risk [?] is a "process to comprehend the nature of risk and to determine the level of risk."

- **A. Analysis**
- B. Assessment

- C. Management
- D. Evaluation

正解: A

解説:

Comprehensive and Detailed Explanation From Exact Extract ISO/IEC 27000 standards:

ISO/IEC 27000 defines:

- * Risk analysis: "process to comprehend the nature of risk and to determine the level of risk" (Clause 3.58).
- * Risk assessment: the overall process of risk identification, risk analysis, and risk evaluation.
- * Risk evaluation: compares results of risk analysis against risk criteria to determine priority.
- * Risk management: coordinated activities to direct and control an organization with regard to risk.

Therefore, the missing word in the given definition is "analysis".

This is important for ISMS implementation: organizations must understand the distinctions. Risk analysis is the core technical evaluation stage, while assessment is the broader process including evaluation, and management refers to the overall governance of risks.

Thus, the correct verified answer is B: Analysis.

質問 # 30

In an audit, what is the definition of an observation?

- A. An issue excluded from the scope of the standard
- **B. A conformity to the standard where there is an opportunity for improvement**
- C. A non-fulfilment of a requirement of ISO/IEC 27001
- D. An issue raised by an interested party

正解: B

解説:

ISO/IEC 27001 mandates internal audits (Clause 9.2) and continual improvement (Clause 10.1) but does not define the specific audit term "observation." However, the audit framework in 9.2 requires an audit programme and impartial auditors, and management review inputs include "feedback on the information security performance including trends in... audit results" and "opportunities for continual improvement

." The companion implementation guidance (ISO/IEC 27002) reinforces the concept of opportunities for improvement in the review of policies: "The reviews should include assessing opportunities for improvement and the need for changes to the approach to information security..." In practical ISO audit usage (aligned with ISO 19011 guidance referenced in the Study Guide), an observation is a recorded conformity where improvement is advisable—commonly termed an Opportunity for Improvement (OFI). The Study Guide's internal audit section emphasizes running an audit programme to identify "potential areas of weakness or non-compliance," supporting the notion of recording improvement opportunities alongside nonconformities. Therefore, within ISO/IEC 27001 audit practice, the best-fit definition is B: a conformity where there is an opportunity for improvement.

質問 # 31

Which factor is required to be determined when understanding the organization and its context?

- A. The processes that will be required to operate the ISMS
- **B. Internal issues affecting the purpose of the ISMS**
- C. The ISO/IEC 27001 clauses which apply to the management system
- D. The information security objectives relevant to the ISMS

正解: B

解説:

Clause 4.1 specifies exactly what must be determined when establishing context: "The organization shall determine external and internal issues that are relevant to its purpose and that affect its ability to achieve the intended outcome(s) of its information security management system." This requirement is about understanding internal and external issues (e.g., culture, capabilities, regulatory environment) that influence the ISMS's effectiveness. Objectives (option B) are addressed later in Clause 6.2; processes (option C) are addressed in Clause 4.4 and operational planning; and "which clauses apply" (option D) is not a determination step—ISO/IEC 27001's requirements in Clauses 4–10 are not optional. Therefore, the direct, required factor per 4.1 is determining internal (and external) issues relevant to the organization's purpose and ISMS outcomes.

質問 # 32

Which benefit is NOT relevant by implementing an ISMS for an organization?

- A. Information security compliance will increase stakeholder trust in the organization
- B. Information security controls are tailored to suit the organization's specific circumstances
- C. Information security risks are assessed and the probability and/or impact reduced
- **D. Information security staff will be qualified to ISO/IEC 27001 Foundation level**

正解: D

解説:

The benefits of implementing an ISMS under ISO/IEC 27001 are well established. Clause 0.1 (General) explains that an ISMS provides a systematic approach to managing sensitive information and "preserves confidentiality, integrity, and availability of information by applying a risk management process and gives confidence to interested parties that risks are adequately managed."

Option A is correct as a benefit, since trust and confidence from stakeholders is an outcome of compliance.

Option C is also a benefit, since controls are chosen and tailored based on organizational context and risk assessment (Clause 6.1.3). Option D reflects another real benefit—reducing the probability and/or impact of incidents through effective risk management. However, staff qualifications (option B) are not guaranteed benefits of implementing an ISMS. While training and competence (Clause 7.2) are required, the standard does not require or provide ISO/IEC 27001 Foundation-level certification for staff. That is an external training/certification scheme, not an ISMS outcome.

Therefore, the benefit NOT relevant to implementing ISO/IEC 27001 is B.
