## Cisco Designing Cisco Security Infrastructure Sample Questions (Q53-Q58):

### NEW QUESTION # 53

How does a SOC leverage flow collectors?

- A. It performs load balancing capabilities across systems to optimize performance.
- **B. It provides data for analysis in threat detection and response system.**
- C. It performs data backup and recovery.
- D. It provides real time content filtering.

**Answer: B**

Explanation:

A flow collector gathers metadata about network traffic (such as NetFlow or IPFIX), which SOC analysts use to analyze communication patterns. This data is critical for threat detection and response, helping identify anomalies, lateral movement, or potential attacks.

### NEW QUESTION # 54

A developer is building new API functions for a cloud-based application. Before writing the code, the developer wants to ensure that destructive actions, including deleting and updating data, are properly protected by access control identifying sensitive fields such

as those that contain passwords or personally identifiable information. Which approach must be used to score the risks proactively?

- A. CSPM
- B. SBOM Generation
- C. Open API Specification Analysis
- D. SAST

**Answer: C**

Explanation:

Open API Specification Analysis evaluates API definitions before code is written, identifying risky endpoints (such as delete or update functions) and sensitive fields (like PII or passwords). This allows developers to proactively score risks and apply proper access controls early in the design phase.

#### NEW QUESTION # 55

An engineering company's Chief Financial Officer recently fall victim to a phishing scam by responding to an urgent email. The mail appeared to be from a trusted business partner, and it requested sensitive tax information. The incident led to significant financial and reputational damage. To prevent similar occurrences in the future, the security team must implement an effective mitigation strategy. Which mitigation strategy must the security team implement to prevent similar occurrences in the future?

- A. upstream traffic filter
- B. granular port security strategy
- C. data loss prevention strategy
- D. targeted education campaign

**Answer: D**

Explanation:

A targeted education campaign directly addresses phishing by training employees, especially high-value targets like executives, to recognize social engineering attempts. While technical controls help, phishing primarily exploits human behavior, so awareness and training are the most effective preventive measures.

#### NEW QUESTION # 56

An oil and gas company recently faced a security breach when an employee's notepad, which contained critical login credentials, was stolen. The incident led to unauthorized access to a user account, which posed a significant risk to sensitive company data and operations. The company wants to adopt a security measure that enhances user account protection. Which action must be taken to prevent breaches like this from happening in the future?

- A. Implement single sign-on.
- B. Implement MFA
- C. Configure a password expiration policy.
- D. Update the RADIUS server.

**Answer: B**

Explanation:

Multi-Factor Authentication (MFA) strengthens user account security by requiring additional verification factors beyond passwords, such as tokens or biometrics. Even if credentials are stolen, MFA prevents unauthorized access, directly addressing the breach scenario.

#### NEW QUESTION # 57

Which two solutions help ensure consistent policy enforcement across multi-cloud workloads?  
(Choose two.)

- A. Static IP routing
- B. SNMP traps
- C. Cisco Secure Workload (Tetration)
- D. Cloud-delivered Firewall (CDFW)

**Answer: C,D**

Explanation:

Cisco Secure Workload provides workload visibility and policy enforcement across environments, while cloud-delivered firewalls apply consistent security policies across multiple cloud platforms.
