## SAP Certified Associate - Integration Developer Sample Questions (Q51-Q56):

### NEW QUESTION # 51

For which of the following scenarios can you use scripting in an integration flow?

- A. Add information to the message log
- B. Configure an OData adapter.
- C. Create XSLT mapping artifacts.

**Answer: A**

Explanation:

In SAP Cloud Integration (part of Integration Suite), scripting (Groovy, JavaScript) is supported in integration flows to handle custom logic that cannot be achieved by standard adapters or mappings. Example use cases:

Enriching messages with dynamic values.

Adding custom log entries into the Message Processing Log.

Custom validation, conversions, or calculations.

Other options:

A). Create XSLT mapping artifacts # Achieved via XSLT, not scripting.

C). Configure an OData adapter # Done via adapter configuration, not scripting.

Thus, scripting is used for runtime logic enhancements like adding information to the message log.

### NEW QUESTION # 52

On which standards is OData based?

- A. HTTP, AtomPub, and JSON
- B. SOAP, AtomPub, and JSON
- C. TCP, AtomPub, and JSON

**Answer: A**

Explanation:

OData (Open Data Protocol) is a REST-based protocol standardized by OASIS and adopted widely in SAP systems.

It builds on HTTP as the communication protocol.

It uses AtomPub (Atom Publishing Protocol) and JSON as payload representation formats.

SOAP is not used for OData; instead, OData relies on REST principles.

TCP is the underlying transport layer, but OData is explicitly defined over HTTP.

Thus, the correct basis for OData is HTTP, AtomPub, and JSON.

### NEW QUESTION # 53

You want to split a message that contains recurring child nodes. Which of the following splitter types can you use? Note: There are 2 correct answers to this questions.

- A. Iterating Splitter
- B. EDI Splitter
- C. General Splitter
- D. PKCS#7/CMS Splitter

**Answer: A,C**

Explanation:

To split a message that contains recurring child nodes, you can use a General Splitter or an Iterating Splitter. A General Splitter allows you to split a message based on an XPath expression that defines the splitting criteria. An Iterating Splitter allows you to split a message based on an XPath expression that defines the repeating element. Reference: Modernize Integration with SAP Integration Suite | openSAP

### NEW QUESTION # 54

Which of the following API modeling languages can you use to describe APIs? Note: There are 2 correct answers to this question.

- A. OpenAPI

- B. CXML
- C. HTML
- D. RAML

**Answer: A,D**

Explanation:

In SAP API Management, supported API description languages include:

RAML (RESTful API Modeling Language)

OpenAPI Specification (OAS, formerly Swagger)

Both are industry-standard languages for modeling REST APIs.

Other options:

A). HTML # A markup language for UI, not an API modeling language.

D). CXML (Commerce XML) # A B2B procurement standard, not for API modeling.

### NEW QUESTION # 55

What are some message protocols that the API Management capability within SAP Integration Suite supports?

Note: There are 2 correct answers to this question.

- A. OData
- B. RFC
- C. IDoc
- D. SOAP

**Answer: A,D**

Explanation:

API Management in SAP Integration Suite supports HTTP-based protocols.

Supported # SOAP, OData, REST (OpenAPI).

Not supported directly # RFC and IDoc (these are legacy SAP protocols handled via Cloud Integration or On- Premise adapters, not via API Management).

Thus, the correct supported message protocols are SOAP and OData.
