Our Professional-Cloud-Security-Engineer test questions are compiled by domestic first-rate experts and senior lecturer and the contents of them contain all the important information about the test and all the possible answers of the questions which may appear in the test. You can use the practice test software to check your learning outcomes. Our Professional-Cloud-Security-Engineer test practice guide' self-learning and self-evaluation functions, the statistics report function, the timing function and the function of stimulating the test could assist you to find your weak links, check your level, adjust the speed and have a warming up for the real exam. You will feel your choice to buy Professional-Cloud-Security-Engineer Exam Dump is too right.

3. Security in Google Cloud

This is the last course that candidates should go through to prepare for the Google Professional Cloud Security Engineer exam. This training covers the security controls on Google Cloud from a wider perspective. The domains addressed here include the mitigation techniques used to manage attacks at different points within a Google-centered infrastructure. These include phishing attacks, threats associated with content use or classification, and the distributed denial-of-service (DDoS).

Google Professional-Cloud-Security-Engineer Certification Exam is highly regarded in the industry as it is recognized as a validation of the candidate's skills and knowledge in implementing and managing security solutions on Google Cloud Platform. Google Cloud Certified - Professional Cloud Security Engineer Exam certification provides the candidate with a competitive edge in the job market and opens up new career opportunities. Additionally, the certification demonstrates the candidate's commitment to continuous learning and professional development.

With the arrival of the flood of the information age of the 21st century, people are constantly improve their knowledge to adapt to the times. But this is still not enough. In the IT industry, Google's Professional-Cloud-Security-Engineer exam certification is the essential certification of the IT industry. Because this exam is difficult, through it, you may be subject to international recognition and

acceptance, and you will have a bright future and holding high pay attention. ActualTestsIT has the world's most reliable IT certification training materials, and with it you can achieve your wonderful plans. We guarantee you 100% certified. Candidates who participate in the Google Professional-Cloud-Security-Engineer Certification Exam, what are you still hesitant? Just do it quickly!

Google Cloud Certified - Professional Cloud Security Engineer Exam Sample Questions (Q85-Q90):

NEW QUESTION # 85

Your company has been creating users manually in Cloud Identity to provide access to Google Cloud resources. Due to continued growth of the environment, you want to authorize the Google Cloud Directory Sync (GCDS) instance and integrate it with your on-premises LDAP server to onboard hundreds of users.

You are required to:

Replicate user and group lifecycle changes from the on-premises LDAP server in Cloud Identity.

Disable any manually created users in Cloud Identity.

You have already configured the LDAP search attributes to include the users and security groups in scope for Google Cloud. What should you do next to complete this solution?

- A. 1. Configure the LDAP search attributes to exclude manually created Cloud identity users not found in LDAP.2. Run GCDS after user and group lifecycle changes.
- **B. 1. Configure the option to suspend domain users not found in LDAP.2. Set up a recurring GCDS task.**
- C. 1. Configure the LDAP search attributes to exclude manually created Cloud Identity users not found in LDAP.2. Set up a recurring GCDS task.
- D. 1. Configure the option to delete domain users not found in LDAP.2. Run GCDS after user and group lifecycle changes.

Answer: B

NEW QUESTION # 86

Your organization operates in a highly regulated environment and has a stringent set of compliance requirements for protecting customer data. You must encrypt data while in use to meet regulations. What should you do?

- **A. Establish a trusted execution environment with a Confidential VM.**
- B. Enable the use of customer-supplied encryption keys (CSEK) keys in the Google Compute Engine VMs to give your organization maximum control over their VM disk encryption.
- C. Use customer-managed encryption keys (CMEK) and Cloud KSM to enable your organization to control their keys for data encryption in Cloud SQL.
- D. Use a Shielded VM to ensure a secure boot with integrity monitoring for the application environment.

Answer: A

Explanation:

<https://cloud.google.com/confidential-computing/confidential-vm/docs/confidential-vm-overview>

NEW QUESTION # 87

You want to make sure that your organization's Cloud Storage buckets cannot have data publicly available to the internet. You want to enforce this across all Cloud Storage buckets. What should you do?

- A. Remove Owner roles from end users, and configure Cloud Data Loss Prevention.
- B. Remove *.setIamPolicypermissions from all roles, and enforce domain restricted sharing in an organization policy.
- **C. Configure uniform bucket-level access, and enforce domain restricted sharing in an organization policy.**
- D. Remove Owner roles from end users, and enforce domain restricted sharing in an organization policy.

Answer: C

Explanation:

Explanation

- Uniform bucket-level

access:<https://cloud.google.com/storage/docs/uniform-bucket-level-access#should-you-use>

- Domain Restricted

Sharing:https://cloud.google.com/resource-manager/docs/organization-policy/restricting-domains#public_data_s

NEW QUESTION # 88

Your company's cloud security policy dictates that VM instances should not have an external IP address. You need to identify the Google Cloud service that will allow VM instances without external IP addresses to connect to the internet to update the VMs. Which service should you use?

- A. Cloud DNS
- B. TCP/UDP Load Balancing
- C. Cloud NAT
- D. Identity Aware-Proxy

Answer: C

Explanation:

<https://cloud.google.com/nat/docs/overview> "Cloud NAT (network address translation) lets certain resources without external IP addresses create outbound connections to the internet."

NEW QUESTION # 89

You are migrating an on-premises data warehouse to BigQuery Cloud SQL, and Cloud Storage. You need to configure security services in the data warehouse. Your company compliance policies mandate that the data warehouse must:

- * Protect data at rest with full lifecycle management on cryptographic keys
- * Implement a separate key management provider from data management
- * Provide visibility into all encryption key requests

What services should be included in the data warehouse implementation?

Choose 2 answers

- A. Key Access Justifications
- B. Cloud External Key Manager
- C. Access Transparency and Approval
- D. Customer-Supplied Encryption Keys
- E. Customer-managed encryption keys

Answer: B,E

Explanation:

* Customer-Managed Encryption Keys (CMEK):

* CMEK allows you to manage encryption keys using Cloud Key Management Service (KMS).

This gives you control over the lifecycle of the keys, including rotation, destruction, and auditing.

* Set up a Cloud KMS key ring and create encryption keys that will be used to protect your data in BigQuery, Cloud SQL, and Cloud Storage.

* Configure the services to use CMEK for encrypting data at rest, ensuring compliance with your organization's security policies.

* Cloud External Key Manager (EKM):

* Cloud EKM allows you to use keys managed by an external key management provider to encrypt data in Google Cloud services.

* Integrate your external key management system with Google Cloud using supported protocols and APIs.

* Configure your data warehouse services to use the external keys for encryption, ensuring that key management is handled outside of the Google Cloud environment.

* Key Access Justifications:

* Enable Key Access Justifications to provide visibility into why encryption keys are being accessed. This helps in monitoring and auditing key usage to ensure compliance and security.

* Set up policies and logging to capture and review key access requests, providing insights into how and why keys are used.

* Access Transparency and Approval:

* Implement Access Transparency to gain visibility into Google's access to your data and encryption keys.

* Configure Access Approval to require explicit approval for Google support or engineering access to your data, adding an additional layer of security and control.

References:

* Customer-Managed Encryption Keys (CMEK)

* Cloud External Key Manager (EKM)

* Key Access Justifications

* Access Transparency

* Access Approval

NEW QUESTION # 90

.....

We did not gain our high appraisal by our Professional-Cloud-Security-Engineer exam practice for nothing and there is no question that our Professional-Cloud-Security-Engineer practice materials will be your perfect choice. First, you can see the high hit rate on the website that can straightly proved our Professional-Cloud-Security-Engineer study braindumps are famous all over the world. Secondly, you can free download the demos to check the quality, and you will be surprised to find we have a high pass rate as 98% to 100%.
