

Valid SDS Test Questions & SDS Exam Dumps Free

It will improve your skills to face the difficulty of the SDS exam questions and accelerate the way to success in IT field with our latest study materials. Free demo of our SDS dumps pdf can be downloaded before purchase and 24/7 customer assisting support can be access. Well preparation of SDS Practice Test will be closer to your success and get authoritative certification easily.

The SDS desktop practice exam software and SDS web-based practice test is very beneficial for the applicants in their preparation because these DASCA SDS practice exam provides them with the DASCA SDS Actual Test environment. Exam-Killer offers DASCA SDS practice tests that are customizable. It means takers can change durations and questions as per their learning needs.

>> Valid SDS Test Questions <<

SDS Exam Dumps Free & SDS Test Dump

For SDS test dumps, we give you free demo for you to try, so that you can have a deeper understanding of what you are going to buy. The pass rate is 98%, and we also pass guarantee and money back guarantee if you fail to pass it. SDS test dumps of us contain questions and answers, and it will help you to have an adequate practice. Besides we have free update for one year for you, therefore you can get the latest version in the following year if you buying SDS Exam Dumps of us. Buying them, and you will benefit from them in the next year.

DASCA Senior Data Scientist Sample Questions (Q36-Q41):

NEW QUESTION # 36

Which of the following is TRUE for Tensor?

- A. Tensor is used to describe multidimensional arrays of numbers on which we perform linear operations
- B. Tensor is an array of floating-point numbers
- C. Both B and C
- D. All of the above**
- E. In Tensor, there can be arbitrarily many dimensions to the array

Answer: D

Explanation:

A Tensor is a fundamental data structure in modern machine learning frameworks (e.g., TensorFlow, PyTorch). It is best described as a generalization of vectors and matrices to potentially higher dimensions.

Option A: Correct. Tensors typically store numeric values (commonly floating-point numbers) in structured formats.

Option B: Correct. A tensor can have any number of dimensions (rank). For example:

A scalar is a 0-D tensor.

A vector is a 1-D tensor.

A matrix is a 2-D tensor.

Higher-rank tensors can represent images, videos, or multidimensional datasets.

Option C: Correct. Tensors are explicitly designed to allow linear algebra operations, which are the foundation of deep learning computations (matrix multiplications, dot products, etc.).

Therefore, since all three statements are true, the correct answer is Option E (All of the above).

NEW QUESTION # 37

Which of the following is TRUE for Business Metamorphosis?

- A. Business Metamorphosis exercise can uncover Big Data requirements around decisions, analytics and data sources that can be leveraged to transform or metamorphose your organization's business model
- **B. All of the above**
- C. The Business Metamorphosis phase helps drive an organization's core business model through the analytic insights gathered as the organization traverses the Big Data Business Model Maturity Index
- D. The Business Metamorphosis phase is where organizations integrate the insights that they captured about their customers' usage patterns, product performance behaviors, and overall market trends to transform their business models
- E. Both A and C

Answer: B

Explanation:

Business Metamorphosis is the most advanced phase in the Big Data Business Model Maturity Index (BDBMMI), where organizations fundamentally transform their business models through analytics-driven insights.

Option A: Correct. This phase helps organizations identify big data requirements related to decisions, analytics, and sources that drive business transformation.

Option B: Correct. Organizations integrate customer usage patterns, product behaviors, and market trends into their decision-making to redesign or innovate their business model.

Option C: Correct. Business Metamorphosis ensures that the core business model evolves continuously, guided by insights derived across maturity stages.

Since all are correct, the best answer is Option E (All of the above).

NEW QUESTION # 38

The main purpose of a Statement Of Work (SOW) is to get:

- A. None of the above
- B. Everybody on the same page about what work should be done
- **C. All of the above**
- D. What the priorities are
- E. What expectations are realistic

Answer: C

Explanation:

A Statement of Work (SOW) is a formal document that defines the scope, objectives, deliverables, timeline, and expectations of a project. In data science and IT projects, it ensures:

Clarity of scope (Option A): Everyone understands exactly what work should be done.

Clear priorities (Option B): It defines what is most critical for success.

Realistic expectations (Option C): It aligns stakeholders by setting measurable and achievable goals.

Since all of these are essential purposes of an SOW, the correct answer is Option D (All of the above).

Reference:

DASCA Data Scientist Knowledge Framework (DSKF) - Business Applications: Project Governance and SOW.

NEW QUESTION # 39

The DevOps movement is an outgrowth of which of the following software development methodologies?

- A. Agile
- B. Waterfall
- C. Promise-based algorithms
- D. Test-driven development and model-driven development

Answer: A

Explanation:

The DevOps movement evolved as a natural extension of the Agile methodology.

Agile (Option A): Agile emphasizes iterative development, collaboration, and flexibility. While Agile improved software development speed, it created challenges in integrating development with IT operations.

DevOps emerged to address this by bringing operations into the Agile cycle - enabling continuous integration, delivery, and deployment.

Waterfall (Option B): Incorrect. Waterfall is a rigid, sequential methodology, fundamentally opposite to the DevOps philosophy.

Promise-based algorithms (Option C): Not a methodology - irrelevant here.

Test-driven development and model-driven development (Option D): While these practices support DevOps, they are not the origin of the movement.

Thus, the DevOps movement is an outgrowth of Agile methodology.

NEW QUESTION # 40

Spark is written in:

- A. Scala
- B. C++
- C. Python
- D. Java
- E. C

Answer: A

Explanation:

Apache Spark is an open-source distributed computing framework widely used for big data processing and machine learning pipelines.

The core implementation of Spark is written in Scala (Option A), which runs on the JVM (Java Virtual Machine).

Spark also provides APIs for Java, Python (PySpark), R, and SQL, but its native language is Scala.

Options C (C) and D (C++) are incorrect; Spark is not written in these languages.

Python (Option E) is a supported API, but Spark itself is not written in Python.

Thus, the correct answer is Scala (Option A).
