

# Quiz ADA-C02 - SnowPro Advanced Administrator ADA-C02 Authoritative Online Training

The Snowflake ADA-C02 exam questions in the web-based practice test are real and accurate. This SnowPro Advanced Administrator ADA-C02 (ADA-C02) practice exam is compatible with Mac, Linux, iOS, Android, and Windows. Likewise, no particular software installation or plugin is required because it is a browser-based SnowPro Advanced Administrator ADA-C02 (ADA-C02) practice exam. Chrome, Internet Explorer, Firefox, Safari, Opera, and all the major browsers support the web-based SnowPro Advanced Administrator ADA-C02 (ADA-C02) practice exam.

You can take the online Snowflake ADA-C02 practice exam multiple times. At the end of each attempt, you will get your progress report. By analyzing this report you can eliminate and overcome your mistakes. Snowflake ADA-C02 real dumps increase your chances of passing the ADA-C02 certification exam. A huge number of professionals got successful by using iPassleader ADA-C02 practice test material. In case you don't pass the SnowPro Advanced Administrator ADA-C02, ADA-C02 test after using Snowflake ADA-C02 pdf questions and practice tests, you can claim your refund. You can download a free demo of any ADA-C02 exam dumps format and check the features before buying. Start Snowflake ADA-C02 test preparation today and obtain the highest marks in the actual ADA-C02 exam.

## Free ADA-C02 Sample, Current ADA-C02 Exam Content

When you have a lot of electronic devices, you definitely will figure out the way to study and prepare your ADA-C02 exam with them. It is so cool even to think about it. As we all know that the electronic equipment provides the convenience out of your imagination. With our APP online version of our ADA-C02 practice materials, your attempt will come true. Our ADA-C02 exam dumps can be quickly downloaded to the electronic devices.

## Snowflake SnowPro Advanced Administrator ADA-C02 Sample Questions (Q24-Q29):

### NEW QUESTION # 24

DatabaseA has a single schema called Schema1. This schema contains many tables and views. The ANALYST role has privileges to select from all objects in DatabaseA.Schema1. The SYSADMIN role clones DatabaseA to DatabaseA\_clone. What privileges does the ANALYST role have on tables and views in DatabaseA\_clone? (Choose two.)

- A. USAGE on the database DatabaseA\_clone.Schema1
- B. SELECT on all tables, and only secure views in DatabaseA\_clone.Schema1
- C. USAGE on the schema DatabaseA\_clone
- D. SELECT on all tables, and only non-secure views in DatabaseA\_clone.Schema1
- E. SELECT on all tables and views in DatabaseA\_clone.Schema1

**Answer: C,E**

Explanation:

When a database is cloned, the privileges granted on objects within the source database are preserved in the cloned database. Roles that had privileges on objects such as tables and views continue to have those privileges on the corresponding cloned objects. Therefore, the ANALYST role retains SELECT privileges on all tables and views within the cloned schema. In addition, the cloned database and schema inherit the same access control configuration, allowing the role to use the schema within the cloned database.

#### NEW QUESTION # 25

A company has many users in the role ANALYST who routinely query Snowflake through a reporting tool. The Administrator has noticed that the ANALYST users keep two small clusters busy all of the time, and occasionally they need three or four clusters of that size.

Based on this scenario, how should the Administrator set up a virtual warehouse to MOST efficiently support this group of users?

- A. Create a standard X-Large warehouse, which is equivalent to four small clusters. Set the warehouse to auto-resume and auto-suspend, and give USAGE privileges to the ANALYST role.
- B. Create a multi-cluster warehouse with MIN\_CLUSTERS set to 1. Give MANAGE privileges to the ANALYST role so this group can start and stop the warehouse, and increase the number of clusters as needed.
- C. Create four virtual warehouses (sized Small through XL) and set them to auto-suspend and auto-resume. Have users in the ANALYST role select the appropriate warehouse based on how many queries are being run.
- **D. Create a multi-cluster warehouse with MIN\_CLUSTERS set to 2. Set the warehouse to auto-resume and auto-suspend, and give USAGE privileges to the ANALYST role. Allow the warehouse to auto-scale.**

**Answer: D**

Explanation:

A multi-cluster warehouse with MIN\_CLUSTERS = 2 matches typical usage, while auto-suspend and auto-resume ensure resources are only used when needed. Allowing auto-scaling handles peak periods efficiently, and giving USAGE (not MANAGE) to ANALYST users is secure and appropriate.

#### NEW QUESTION # 26

A Snowflake customer is experiencing higher costs than anticipated while migrating their data warehouse workloads from on-premises to Snowflake. The migration workloads have been deployed on a single warehouse and are characterized by a large number of small INSERTS rather than bulk loading of large extracts. That single warehouse has been configured as a single cluster, 2XL because there are many parallel INSERTS that are scheduled during nightly loads.

How can the Administrator reduce the costs, while minimizing the overall load times, for migrating data warehouse history?

- A. The 2XL warehouse should be changed to 4XL to increase the number of threads available for parallel load queries.
- B. There should be another 2XL warehouse deployed to handle a portion of the load queries.
- C. The INSERTS should be converted to several tables to avoid contention on large tables that slows down query processing.
- **D. The warehouse should be kept as a SMALL or XSMALL and configured as a multi-cluster warehouse to handle the parallel load queries.**

**Answer: D**

Explanation:

For many small, parallel INSERTS, using a multi-cluster warehouse with smaller size (SMALL or XSMALL) allows more concurrent queries to run efficiently and reduces costs compared to a single large warehouse. This configuration improves concurrency without unnecessary compute expense.

#### NEW QUESTION # 27

An Administrator receives data from a Snowflake partner. The partner is sharing a dataset that contains multiple secure views. The Administrator would like to configure the data so that only certain roles can see certain secure views.

How can this be accomplished?

- A. Apply RBAC directly onto the partner's shared secure views.
- B. Clone the data and insert it into a company-owned share and apply the desired RBAC on the new tables.
- C. Individually grant imported privileges onto the schema in the share.

- **D. Create views over the incoming shared database and apply the desired RBAC onto these views.**

**Answer: D**

Explanation:

Permissions cannot be applied directly to objects in a shared database. To enforce role-based access, the Administrator must create views over the shared secure views in a local database and then apply RBAC privileges to those new views. This allows controlling which roles can see which data.

### NEW QUESTION # 28

A Snowflake Administrator needs to set up Time Travel for a presentation area that includes facts and dimensions tables, and receives a lot of meaningless and erroneous IoT data. Time Travel is being used as a component of the company's data quality process in which the ingestion pipeline should revert to a known quality data state if any anomalies are detected in the latest load. Data from the past 30 days may have to be retrieved because of latencies in the data acquisition process. According to best practices, how should these requirements be met? (Choose two.)

- A. Only TRANSIENT tables should be used to ensure referential integrity between the fact and dimension tables.
- **B. The fact and dimension tables should have the same DATA\_RETENTION\_TIME\_IN\_DAYS.**
- C. The DATA\_RETENTION\_TIME\_IN\_DAYS should be kept at the account level and never used for lower level containers (databases and schemas).
- D. Related data should not be placed together in the same schema. Facts and dimension tables should each have their own schemas.
- **E. The fact and dimension tables should be cloned together using the same Time Travel options to reduce potential referential integrity issues with the restored data.**

**Answer: B,E**

Explanation:

To ensure consistent recovery, fact and dimension tables must have the same DATA\_RETENTION\_TIME\_IN\_DAYS, so they can be restored to the same point in time.

Cloning the fact and dimension tables together with consistent Time Travel options ensures data integrity and avoids referential mismatches when reverting to a prior state.

### NEW QUESTION # 29

.....

It is known to us that our ADA-C02 study materials are enjoying a good reputation all over the world. Our study materials have been approved by thousands of candidates. You may have some doubts about our product or you may suspect the pass rate of it, but we will tell you clearly, it is totally unnecessary. If you still do not trust us, you can choose to download demo of our ADA-C02 Test Torrent. The high quality and the perfect service system after sale of our ADA-C02 exam questions have been approbated by our local and international customers. So you can rest assured to buy.

**Free ADA-C02 Sample:** <https://www.ipassleader.com/Snowflake/ADA-C02-practice-exam-dumps.html>

Why do you choose to pass exam successfully with actual test (Free ADA-C02 Sample - SnowPro Advanced Administrator ADA-C02) dumps pdf, No one wants to waste their time on anything in such a seedy and competing society, and neither of our ADA-C02 VCE –examcollection does, Snowflake Online ADA-C02 Training Our after-sales service is really better than others, Our brand has marched into the international market and many overseas clients purchase our ADA-C02 exam dump online.

We have a 24/7 customer service team available for your assistance if you get ADA-C02 stuck somewhere, Migrating a VM's Files Using Storage vMotion, Why do you choose to pass exam successfully with actual test (SnowPro Advanced Administrator ADA-C02) dumps pdf?
