

EDGE-Expert Test Result - Valid EDGE-Expert Test Labs

BONUS!!! Download part of ExamcollectionPass EDGE-Expert dumps for free: https://drive.google.com/open?id=1z5gcNhH9FmcBukF2e5bRm3-Jzwj_JoMO

If you are preparing for the exam in order to get the related EDGE-Expert certification, here comes a piece of good news for you. The EDGE-Expert guide torrent is compiled by our company now has been praised as the secret weapon for candidates who want to pass the EDGE-Expert Exam as well as getting the related certification, so you are so lucky to click into this website where you can get your secret weapon. Our reputation for compiling the best EDGE-Expert training materials has created a sound base for our future business.

EDGE EDGE-Expert Exam Syllabus Topics:

Section	Objectives
Topic 1: EDGE Green Building Fundamentals	- Overview of EDGE system and certification framework - Sustainable design principles
Topic 2: Certification Process	- Verification and audit process - Project registration and documentation requirements
Topic 3: EDGE Software Application	- Interpreting performance results and compliance - Project modeling and inputs in EDGE software
Topic 4: Resource Efficiency Metrics	- Materials efficiency and embodied energy basics - Water efficiency strategies and benchmarks - Energy efficiency concepts and savings calculation

>> EDGE-Expert Test Result <<

100% Pass 2026 EDGE-Expert: Excellence in Design for Greater Efficiencies (EDGE Expert) Exam Perfect Test Result

ExamcollectionPass is one of the leading platforms that has been helping EDGE EDGE-Expert Exam Questions candidates for many years. Over this long time, period the Excellence in Design for Greater Efficiencies (EDGE Expert) Exam (EDGE-Expert) exam dumps helped countless Excellence in Design for Greater Efficiencies (EDGE Expert) Exam (EDGE-Expert) exam questions candidates and they easily cracked their dream EDGE EDGE-Expert Certification Exam. You can also trust Excellence in Design for Greater Efficiencies (EDGE Expert) Exam (EDGE-Expert) exam dumps and start Excellence in Design for Greater Efficiencies (EDGE Expert) Exam (EDGE-Expert) exam preparation today.

EDGE Excellence in Design for Greater Efficiencies (EDGE Expert) Exam Sample Questions (Q109-Q114):

NEW QUESTION # 109

Which of the following BEST describes an EDGE Expert?

- A. A consultant who can issue a preliminary EDGE certificate
- **B. An individual accredited by the EDGE Certifier who can serve as a consultant**
- C. An individual accredited by the EDGE Operations and Management Team who can serve as a consultant
- D. An individual who can serve as both an auditor and a consultant upon EDGE Committee approval

Answer: B

Explanation:

The role of an EDGE Expert is well-defined within the EDGE framework to clarify their responsibilities and qualifications. The EDGE Expert and Auditor Protocols provide a precise description: "An EDGE Expert is an individual accredited by the EDGE Certifier (such as GBCI or other authorized certification bodies) who can serve as a consultant to project teams, advising on the selection of green building measures, preparing the self-assessment in the EDGE software, and guiding the project toward certification" (EDGE Expert and Auditor Protocols, Section 2.1: Roles of EDGE Expert). Option B, an individual accredited by the EDGE Certifier who can serve as a consultant, directly matches this definition. Option A (a consultant who can issue a preliminary EDGE certificate) is incorrect, as Experts do not issue certificates: "Only the EDGE Certification Provider can issue a preliminary certificate, not the EDGE Expert" (EDGE Certification Protocol, Section 3.3: Certification Decision). Option C (an individual who can serve as both an auditor and a consultant upon EDGE Committee approval) is also incorrect, as this violates conflict-of-interest rules: "An individual cannot serve as both an EDGE Expert and Auditor on the same project, even with committee approval, to avoid conflicts of interest" (EDGE Expert and Auditor Protocols, Section 2.3: Conflict of Interest). Option D (an individual accredited by the EDGE Operations and Management Team) is wrong, as accreditation is handled by the Certifier, not the Operations team: "The EDGE Operations and Management Team oversees the program, while accreditation of Experts is managed by the EDGE Certifier" (EDGE Certification Protocol, Section 1.3: Program Structure). The EDGE User Guide further supports this: "EDGE Experts are accredited professionals who consult on projects, having passed the EDGE Expert exam administered through the Certifier" (EDGE User Guide, Section 6.4: Working with EDGE Experts). Thus, Option B best describes an EDGE Expert. Reference: EDGE Expert and Auditor Protocols, Section 2.1: Roles of EDGE Expert, Section 2.3: Conflict of Interest; EDGE Certification Protocol, Section 3.3: Certification Decision, Section 1.3: Program Structure; EDGE User Guide Version 2.1, Section 6.4: Working with EDGE Experts.

NEW QUESTION # 110

The EDGE definition of a green building is a building that uses less resources quantified as

- A. 40% less energy, 20% less water, and 20% less embodied carbon in materials as compared to a local benchmark.
- B. 20% less energy, 20% less water, and 20% less waste as compared to a local benchmark.
- **C. 20% less energy, 20% less water, and 20% less embodied carbon in materials as compared to a local benchmark.**
- D. 20% less energy, 20% less water, and 20% less embodied carbon in materials as compared to similar buildings in other countries.

Answer: C

Explanation:

According to the CBCI EDGE curriculum, the foundational definition of an EDGE Certified green building is one that achieves a minimum of 20 percent savings in energy, 20 percent savings in water, and 20 percent reduction in embodied carbon in materials when compared to a local baseline or benchmark defined within the EDGE software. This local benchmark reflects standard building practices, climatic conditions, and typical construction methods for the specific country where the project is located. The 20-20-20 threshold represents the minimum performance requirement for achieving EDGE Certified status. Higher performance levels, such as EDGE Advanced, require at least 40 percent energy savings but still maintain the 20 percent thresholds for water and materials. Therefore, option B reflects the requirement for EDGE Advanced, not the base definition of a green building under EDGE. Option C is incorrect because EDGE comparisons are always made against a locally defined baseline, not buildings in other countries. Option D is incorrect because EDGE evaluates embodied carbon in materials, not waste reduction as a core certification metric. Therefore, the correct definition aligns with option A.e, the user type that has access to the Share Subproject function is the Owner.

NEW QUESTION # 111

Within the EDGE methodology, recycled water or rainwater harvested on site is deducted from the building's Improved Case water consumption and is reported as:

- A. Water savings
- B. Wastewater
- C. Potable water
- D. Water usage

Answer: A

Explanation:

The EDGE methodology quantifies the impact of water efficiency measures like rainwater harvesting and recycled water by comparing the Improved Case to the Base Case. The EDGE Methodology Report states:

"Recycled water or rainwater harvested on site reduces the building's potable water demand in the Improved Case. This reduction is deducted from the Improved Case water consumption and reported as water savings in the EDGE software, reflecting the volume of potable water no longer required due to the measure" (EDGE Methodology Report Version 2.0, Section 4.2: Water Savings Calculations). Option B, water savings, accurately reflects this reporting method, as the software highlights the reduction in potable water use as a saving. Option A (water usage) is incorrect, as this term refers to the total consumption, not the reduction:

"Water usage in EDGE refers to the total volume consumed, not the savings achieved" (EDGE User Guide, Glossary). Option C (wastewater) is unrelated, as it refers to water output, not savings: "Wastewater is water discharged from the building, not a savings metric" (EDGE User Guide, Glossary). Option D (potable water) is also incorrect, as the measure reduces potable water use, but the reported metric is the saving, not the potable water itself: "Potable water demand is an input, while savings are the output" (EDGE User Guide, Section 5.2: Water Efficiency Measures). Thus, the correct reporting is water savings (Option B).

Reference:EDGE Methodology Report Version 2.0, Section 4.2: Water Savings Calculations; EDGE User Guide Version 2.1, Section 5.2: Water Efficiency Measures, Glossary.

NEW QUESTION # 112

For a project in a hot and dry climate with no air-conditioning system, which of the following will NOT have an impact on the occupants' thermal comfort?

- A. Ceiling fans
- B. Solar shading
- C. Wall and roof insulation
- D. Solar photovoltaics

Answer: D

Explanation:

In a hot and dry climate without air-conditioning, thermal comfort relies on passive design strategies that reduce heat gain or improve air movement. The EDGE User Guide discusses passive measures for thermal comfort: "In hot climates without air-conditioning, thermal comfort can be improved through ceiling fans, which enhance air movement, solar shading, which reduces solar heat gain, and wall and roof insulation, which minimizes heat transfer into the building" (EDGE User Guide, Section 3.5: Passive Design Strategies).

Option A (ceiling fans) improves air movement, directly impacting thermal comfort: "Ceiling fans increase air speed, enhancing evaporative cooling on occupants' skin" (EDGE Methodology Report Version 2.0, Section 5.5: Thermal Comfort Measures). Option B (solar shading) reduces heat gain, improving comfort: "External shading reduces solar radiation entering the building, lowering indoor temperatures" (EDGE User Guide, Section 3.5: Passive Design Strategies). Option C (wall and roof insulation) also enhances comfort by reducing heat transfer: "Insulation lowers the U-value of the building envelope, maintaining cooler indoor temperatures" (EDGE User Guide, Section 4.1: Insulation Measures). Option D (solar photovoltaics) generates electricity but does not directly affect thermal comfort in a building without air-conditioning: "Solar photovoltaics contribute to energy supply but do not directly influence indoor thermal comfort unless used to power cooling systems, which are absent in this scenario" (EDGE Methodology Report Version 2.0, Section 5.3: Energy Measures). Thus, solar photovoltaics (Option D) will not impact thermal comfort in this context.

Reference:EDGE User Guide Version 2.1, Section 3.5: Passive Design Strategies, Section 4.1: Insulation Measures; EDGE Methodology Report Version 2.0, Section 5.5: Thermal Comfort Measures, Section 5.3: Energy Measures.

NEW QUESTION # 113

Which of the following is NOT a characteristic of the EDGE standard?

- A. Fast tool with ideal measures for the best return on investment
- **B. Holistic approach that takes into account wider sustainability issues**
- C. Simple, as beneath the intuitive interface is a powerful engine that understands local climate and how buildings will be used
- D. Smart, as capital costs and payback period for buildings are displayed

Answer: B

Explanation:

The EDGE standard is designed to be a practical, focused tool for green building certification, emphasizing specific resource efficiency metrics. The EDGE User Guide describes its characteristics: "EDGE is a simple, fast, and smart tool for green building certification. It provides an intuitive interface with a powerful engine that accounts for local climate and building use (simple), identifies measures with the best return on investment (fast), and displays capital costs and payback periods (smart)" (EDGE User Guide, Section 1.1:

Introduction to EDGE). Options A, C, and D align with these descriptions. However, Option B (holistic approach that takes into account wider sustainability issues) is not a characteristic of EDGE, as the standard focuses narrowly on energy, water, and embodied energy in materials, not broader sustainability issues like biodiversity or social equity. This is clarified in the EDGE Certification Protocol: "EDGE is not a holistic sustainability standard; it specifically targets resource efficiency in energy, water, and materials, excluding wider sustainability metrics such as indoor air quality or ecological impact" (EDGE Certification Protocol, Section 1.2: Scope of EDGE Standard). Thus, Option B is not a characteristic of the EDGE standard.

Reference: EDGE User Guide Version 2.1, Section 1.1: Introduction to EDGE; EDGE Certification Protocol, Section 1.2: Scope of EDGE Standard.

NEW QUESTION # 114

.....

Good product and all-round service are the driving forces for a company. Our Company is always striving to develop not only our EDGE-Expert study materials, but also our service because we know they are the aces in the hole to prolong our career. Reliable service makes it easier to get oriented to the exam. If our candidates fail to pass the EDGE-Expert Exam unfortunately, you can show us the failed record, and we will give you a full refund.
