Microsoft Azure Data Fundamentals Sample Questions (Q261-Q266):

NEW QUESTION # 261

Drag and Drop Question

Match the datastore services to the appropriate descriptions.

To answer, drag the appropriate service from the column on the left to its description on the right.

Each service may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

□

Answer:

Explanation:

Explanation:

Box 1: Azure Cosmos DB

In Azure Cosmos DB's SQL (Core) API, items are stored as JSON. The type system and expressions are restricted to deal only with JSON types.

Box 2: Azure Files

Azure Files offers native cloud file sharing services based on the SMB protocol.

To answer, drag the appropriate workload type from the column on the left to its scenario on the right. Each workload type may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Answer:

Explanation:

NEW QUESTION # 263

To complete the sentence, select the appropriate option in the answer area.

Answer:

Explanation:

NEW QUESTION # 264

Select the answer that correctly completes the sentence.

Answer:

Explanation:

Explanation

NEW QUESTION # 265

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: Yes

Azure Databricks can consume data from SQL Databases using JDBC and from SQL Databases using the Apache Spark connector.

The Apache Spark connector for Azure SQL Database and SQL Server enables these databases to act as input data sources and output data sinks for Apache Spark jobs.

Box 2: Yes

You can stream data into Azure Databricks using Event Hubs.

Box 3: Yes

You can run Spark jobs with data stored in Azure Cosmos DB using the Cosmos DB Spark connector. Cosmos can be used for

You can use the connector with Azure Databricks or Azure HDInsight, which provide managed Spark clusters on Azure.
