Pass Guaranteed 2026 C1000-189: IBM Instana Observability v1.0.277 Administrator - Professional– Trustable Certification Exam Infor

What's more, part of that RealVCE C1000-189 dumps now are free: https://drive.google.com/open?id=1E4xpW2ewnIT_jaDp4VNbGjNL3UqcgBba

We update our C1000-189 test prep within one year and you will download free which you need. After one year, we provide the client 50% discount benefit if buyers want to extend their service warranty so you can save much money. If you are the old client, you can enjoy some certain discount when buying C1000-189 Exam Torrent so you can enjoy more service and more benefits. Our update can provide the latest and most useful C1000-189 prep torrent to you and you can learn more and pass the C1000-189 exam successfully.

IBM C1000-189 Exam Syllabus Topics:

Topic	Details
Topic 1	• Security and Compliance: This section of the exam measures the skills of IT Security Analysts and focuses on the data protection and compliance aspects of Instana deployment. Candidates must describe and implement data retention policies, plan for regulatory compliance, secure APIs, manage user access, and interpret audit logs. The goal is to ensure secure system configurations that align with organizational and regulatory standards.

Topic 2	• Troubleshooting: This section of the exam measures the skills of System Support Engineers and focuses on resolving technical and operational issues in Instana. It includes configuring log levels, collecting logs for debugging, and identifying connectivity issues between agents and the backend. Candidates will troubleshoot installation failures, diagnose communication problems, and apply corrective measures to ensure consistent Instana performance and stability across environments.
Topic 3	• Configuration: This section of the exam measures the skills of DevOps Administrators and evaluates their ability to configure and optimize Instana operational settings. It involves setting up business process monitoring, configuring both cloud and serverless agents, and defining agent proxy parameters. Candidates will learn to implement various technologies and sensors, manage OpenTelemetry integrations, set up smart alerts, create service naming rules, and define custom SLIs and payloads for alert channels. Managing licenses and ensuring proper configuration of alerts and notifications are also key components of this domain.

Providing You Pass-Sure C1000-189 Certification Exam Infor with 100% Passing Guarantee

We have always set great store by superior after sale service, since we all tend to take responsibility for our customers who decide to choose our C1000-189 training materials. We pride ourselves on our industry-leading standards of customer care. Our worldwide after sale staffs will provide the most considerate after-sale service for you in twenty four hours a day, seven days a week, that is to say, no matter you are or whenever it is, as long as you have any question about our C1000-189 Exam Torrent or about the exam or even about the related certification，you can feel free to contact our after sale service staffs who will always waiting for you on the internet.

IBM Instana Observability v1.0.277 Administrator - Professional Sample Questions (Q34-Q39):

NEW QUESTION # 34
Which statement correctly describes the usage and migration options for the Self-Hosted Standard Edition?

- A. It does not support data migration from the Self-Hosted Classic Edition.
- B. It is only for new installations, but data can be migrated from a Self-Hosted Classic Edition.
- C. It can be used for both new installations and upgrades from any edition.
- D. It is not intended for new installations, only for upgrades from the Self-Hosted Classic Edition.

Answer: A

Explanation:
IBM's product migration matrix for Instana confirms strict usage boundaries between different self-hosted editions. The documentation clarifies: "Instana Self-Hosted Standard Edition does not support migration of data from the Self-Hosted Classic Edition." Each edition uses different architectural components, storage formats, and telemetry databases. Therefore, upgrading from Classic to Standard Edition requires a fresh install, without direct movement of monitoring history or historical configuration. Upgrades are only supported within the same product branch, ensuring compatibility and stability. Attempting migration from the Classic Edition is unsupported and risks operational deviation. Standard Edition can be newly installed but not upgraded from the Classic base, as per IBM's verified change and upgrade path guidance.

NEW QUESTION # 35
Which tool does Instana use to provide geographical data by mapping user IP addresses?

- A. Geo Application Service
- B. Universal Geo database
- C. Google Maps API
- D. GeoLite2 database

Answer: D

Explanation:
IBM Instana leverages the open-source and widely recognized GeoLite2 database for mapping user IP addresses to their approximate physical locations in synthetic and real user monitoring scenarios. The documentation details: "Instana provides geographical and location metadata based on the GeoLite2 database, which is regularly updated for improved accuracy and privacy compliance." GeoLite2 is a MaxMind-developed database providing country, city, region, and sometimes ISP-level information from IP addresses. Using an on-premise and regularly-curated geo database ensures no end-user data is ever transmitted to external or third-party web mapping services (such as Google Maps), maintaining strong data privacy and compliance for enterprise customers. Other listed tools are not native to Instana's geo lookup implementation.

NEW QUESTION # 36
Which language is primarily used for writing Synthetic monitoring API scripts in Instana?

- A. Java
- B. Python
- C. JavaScript
- D. Go

Answer: C

Explanation:
Instana's Synthetic Monitoring module allows administrators to script user journeys and API checks to validate service performance and uptime. According to official IBM documentation, "Synthetic monitoring API scripts use JavaScript as the scripting language for configuring user flows and custom API tests." Instana has designed its synthetic user interface to interpret JavaScript natively which provides powerful, flexible constructs for simulating user interactions, custom API payloads, test logic, and error handling. This ensures broad compatibility with real browser environments and highly customizable synthetic scenarios. Java, Python, and Go are not supported for browser-based or synthetic API scripting in Instana's synthetic monitors. JavaScript is chosen for its ubiquity and ease of integration with DOM-like and API interaction patterns, supporting the most common web-based automation needs as described in the documentation.

NEW QUESTION # 37
Which public cloud service can be monitored using Instana serverless agents?

- A. Azure Redis Cache
- B. AWS SQS
- C. AWS Kinesis
- D. AWS Lambda

Answer: D

Explanation:
IBM Instana supports direct monitoring of AWS Lambda via serverless-specific agents that bridge trace, metric, and log data between Lambda executions and the Instana backend. The documentation specifies: "Instana's serverless agents enable tracing and monitoring of AWS Lambda functions-including cold start events, performance, and error metrics-correlating invocation traces with upstream and downstream services." Lambda is the only public cloud-native serverless runtime natively and fully integrated with Instana's instrumentation and tracing. Azure Redis Cache, AWS Kinesis, and AWS SQS are data stores or message services, not supported for full serverless agent instrumentation (though they may be monitored via associated infrastructure and integration sensors). Instana's Lambda agent is deployed as a Lambda layer or sidecar, delivering first-class observability for serverless architectures.

NEW QUESTION # 38
Which two steps are performed in preparation for migrating from a self-hosted single-node deployment to a multi-node deployment of Instana?

- A. Start the self-hosted Standard Edition on the current host.
- B. On the two new hosts, make sure to check the Kernel parameters.
- C. On all the three hosts, configure private IP addresses.

- D. Delete the disks from old host and move them to new host.
- E. On all the three nodes, configure Docker.

Answer: B,C

Explanation:
IBM's migration process for Instana specifies steps requisite for a successful transition from single-node to multi-node deployment. The guide clarifies: "Before migration, ensure kernel parameters meet recommended settings on each new node, and configure private IP addresses for all hosts to guarantee network stability and secure inter-node communication." Kernel parameter adjustment (C) involves tuning system limits and TCP behavior for high-availability performance. Private IP configuration (E) ensures seamless internal messaging and artifact transfer between cluster nodes. Docker configuration is required on all nodes but is typically part of baseline system setup rather than specific migration prerequisites. Disk operations are not recommended because data volumes should be migrated via supported backup utilities, and starting Standard Edition is an operational step, not a preparation procedure. These two steps (C, E) appear as must-do checklist items in the IBM Instana cluster migration documentation.

NEW QUESTION # 39
......

Our website offer considerate 24/7 services with non-stopping care for you after purchasing our C1000-189 practice materials. Although we cannot contact with each other face to face, but there are no disparate treatments and we treat every customer with consideration like we are around you at every stage during your review process. We will offer help insofar as I can. While our C1000-189 practice materials are beneficiary even you lose your chance of winning this time. Full refund or other version switch is accessible.
