

Reliable SCAIP Test Answers, Guide SCAIP Torrent

Life of future will definitely be much more easy and convenient than the life of today, it is not late whenever you want to work as an IT engine. Our SCAIP exam questions and answers help you realize your dream easily. We Braindumpsqa offer the top-class exam materials similar with the real test. SCAIP Exam Questions And Answers assist people to master the real test questions and key knowledge so that candidates will fell easy and casual in real test so that they can clear exams and obtain a Saviynt certification certainly.

Saviynt SCAIP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Segregation of Duties: This section addresses identifying, preventing, and remediating SOD conflicts using rulesets, mitigating controls, and both preventative and detective analysis methods.
Topic 2	<ul style="list-style-type: none">• Rules Engineering: This section covers creating and managing automated access policies and rules that handle joiner, mover, and leaver scenarios through technical and user update rules.
Topic 3	<ul style="list-style-type: none">• Access Request System: This section focuses on configuring and managing the end-to-end access request process, including workflows, approvals, and provisioning for both connected and disconnected applications.

Guide SCAIP Torrent & SCAIP Reliable Test Braindumps

You can learn from your Saviynt Certified Advanced IGA Professional (Level 200) (SCAIP) practice test mistakes and overcome them before the actual Saviynt Certified Advanced IGA Professional (Level 200) (SCAIP) exam. The software keeps track of the previous Saviynt Certified Advanced IGA Professional (Level 200) (SCAIP) practice exam attempts and shows the changes of each attempt. You don't need to wait days or weeks to get your performance report. The software displays the result of the Saviynt SCAIP Practice Test immediately, which is an excellent way to understand which area needs more attention.

Saviynt Certified Advanced IGA Professional (Level 200) Sample Questions (Q36-Q41):

NEW QUESTION # 36

An EIC Administrator wants to retrieve a report of users and their assigned SAV Roles. What are the ways in which it can be achieved? (Multi-Select)

- A. Create an analytics with the SQL Query to get the data and export as CSV/Excel
- B. Run a SQL Query to retrieve the data in Data Analyzer
- C. Using enhanced query

- **D. Create analytics with the SQL Query to get the data and select the checkbox "Send Email As Attachment" in analytics configuration**

Answer: A,B,D

Explanation:

In Saviynt EIC, retrieving reports such as users and their assigned SAV roles can be achieved through multiple analytics and reporting mechanisms.

Option A is correct because administrators can create Analytics using SQL queries and configure them to send results via email as attachments, which is useful for scheduled reporting and automated distribution.

Option B is also valid since Analytics allows administrators to export query results into CSV or Excel formats, enabling offline analysis, auditing, and sharing with stakeholders.

Option C is correct because Data Analyzer provides a direct interface to execute SQL queries on the Saviynt database, allowing administrators to quickly retrieve required data without creating a formal analytics job.

Option D (Using enhanced query) is not a standard or recognized reporting method within Saviynt for this use case. While advanced queries can be written, "enhanced query" is not a defined feature or module for report extraction.

Thus, the correct answers are A, B, and C, which represent the primary supported methods for reporting in Saviynt.

NEW QUESTION # 37

What are the filters available to view the SOD violations in the SOD Risk Evaluation Job? (Multi-Select)

- A. User Account Evaluation
- **B. Security System**
- **C. Ruleset**
- **D. Users**

Answer: B,C,D

Explanation:

In Saviynt EIC, the SOD (Segregation of Duties) Risk Evaluation Job is used to identify conflicts in user access that violate defined SOD policies. To efficiently analyze and review these violations, Saviynt provides several filtering options.

Users (A) is a valid filter that allows administrators to view SOD violations specific to individual users or a group of users. This is helpful for targeted investigations or audits.

Security System (B) is also a valid filter, enabling administrators to narrow down violations based on specific applications or systems. This is useful when analyzing risks within a particular application landscape.

Ruleset (C) is another important filter, as SOD violations are evaluated based on predefined rule sets.

Administrators can filter results based on specific rulesets to understand which policies are being violated.

Option D (User Account Evaluation) is not a standard filter in the SOD Risk Evaluation Job. It is more related to job execution scope rather than filtering results.

Thus, the correct answers are Users, Security System, and Ruleset, which are the primary filters for analyzing SOD violations.

NEW QUESTION # 38

In REST connector, under which JSON do you specify the provisioning limit and connection timeout settings?

- A. StatusThresholdConfig
- B. ConfigJSON
- **C. ConnectionJSON**
- D. MODIFYUSERDATAJSON

Answer: C

Explanation:

In Saviynt EIC REST connector configuration, ConnectionJSON is the central configuration block where all connection-level properties are defined. This includes not only the base URL, authentication details, and headers, but also critical operational parameters such as connection timeout settings and provisioning limits (such as throttling or API limits).

Provisioning activities like account creation, update, and deletion rely on stable connectivity to the target system. Therefore, timeout configurations (for example, connection timeout and read timeout) are defined in ConnectionJSON to ensure that API calls do not hang indefinitely and can fail gracefully if the target system is unresponsive. Similarly, provisioning limits-such as maximum records processed or API throttling controls-are configured at this level to manage performance and avoid overloading external systems.

OptionA (ConfigJSON)is not a standard JSON used in REST connector configurations. OptionB (MODIFYUSERDATAJSON)is used specifically for user update operations. OptionD (StatusthresholdConfig) relates to job/status handling rather than connection parameters.

Thus, ConnectionJSON is the correct place for configuring provisioning limits and timeout settings in Saviynt REST connectors.

NEW QUESTION # 39

In EIC Service Account Management, when the current owner is terminated, how does EIC identify the new owner?

- A. The new owner is defined in the Service Account attribute: "Owner On Terminate"
- B. The new owner is identified based on SQL query configured in Global Configuration
- C. The new owner is defined in the current owner's user attribute: "Owner On Terminate"
- D. The new owner is defined in the Manage Owners Page

Answer: C

Explanation:

In Saviynt EIC,Service Account Managementincludes mechanisms to ensure continuity of ownership when an account owner leaves the organization. When a user is terminated, the system automatically determines the new owner based on a predefined configuration.

The correct approach is through theuser attribute "Owner On Terminate"(Option B). This attribute is maintained at the user level and specifies who should inherit ownership of service accounts if the current owner is terminated. During the termination process, Saviynt checks this attribute and transfers ownership accordingly, ensuring there is no orphaned service account and maintaining accountability.

Option A is incorrect because SQL queries in Global Configuration are not typically used for ownership reassignment in this context.

Option C (Manage Owners Page) is used for manual updates, not automatic reassignment upon termination. Option D is incorrect because the ownership transfer logic is driven by theuser attribute, not a service account attribute.

Thus, using the"Owner On Terminate" user attributeensures automated, policy-driven ownership transitions in Saviynt.

NEW QUESTION # 40

Which option can be used in the REST Connector to perform attribute mapping between target application and EIC?

- A. ImportAccountEntJSON
- B. CreateAccountEntJSON
- C. CreateAccountJSON
- D. UpdateAccountJSON

Answer: C

Explanation:

In Saviynt EIC REST connector configurations,attribute mapping between Saviynt and the target applicationis primarily handled during provisioning operations such as account creation and updates. Among the given options,CreateAccountJSONis the correct configuration where attribute mapping is explicitly defined for provisioning new accounts in the target system.

CreateAccountJSON (Option C)contains the payload structure and field mappings that determine how Saviynt attributes (such as username, email, department, etc.) are translated into the target application's API request format. Administrators define mappings using placeholders and transformation logic to ensure correct data flow from Saviynt to the external system.

OptionA (ImportAccountEntJSON)is used for reconciliation (importing accounts and entitlements), not provisioning. OptionB (CreateAccountEntJSON)is not a standard REST connector configuration in Saviynt.

OptionD (UpdateAccountJSON)is used for modifying existing accounts, but the primary and most commonly referenced mapping configuration for attribute mapping is defined in CreateAccountJSON during initial provisioning.

Thus,CreateAccountJSONis the correct answer for attribute mapping between EIC and the target application.

NEW QUESTION # 41

.....

Braindumpsqa is continuing to provide the candidates with Saviynt certification exam-related reference materials for years.

Braindumpsqa is the website that is validated by all the SCAIP test-takers, which can provide all candidates with the best questions and answers. Braindumpsqa comprehensively ensures the interests of all candidates, which enjoys immense praise of the candidates.

Moreover Braindumpsqa is the most trusted website on the current market.
