CheckPoint Check Point Certified Security Administrator - R82 Sample Questions (Q219-Q224):

NEW QUESTION # 219

What is the purpose of a Stealth Rule?

- A. A rule at the end of your policy to drop any traffic that is not explicitly allowed.
- B. A rule that allows administrators to access SmartDashboard from any device.
- C. A rule used to hide a server's IP address from the outside world.
- **D. To drop any traffic destined for the firewall that is not otherwise explicitly allowed.**

Answer: D

Explanation:

The purpose of a Stealth Rule is to drop any traffic destined for the firewall that is not otherwise explicitly allowed¹, p. 32. A Stealth Rule is usually placed at the top of the rule base, before any other rule that allows traffic to the Security Gateway², p. 13. A Stealth Rule is not used to hide a server's IP address, to allow administrators to access SmartDashboard, or to drop any traffic that is not explicitly allowed. NEW QUESTION # 220

Is it possible to have more than one administrator connected to a Security Management Server at once?

- **A. Yes, but objects edited by one administrator will be locked for editing by others until the session is published.**
- B. Yes, but only one of those administrators will have write-permissions. All others will have read-only permission.
- C. Yes, but only if all connected administrators connect with read-only permissions.
- D. No, only one administrator at a time can connect to a Security Management Server

Answer: A

Explanation:

It is possible to have more than one administrator connected to a Security Management Server at once, but objects edited by one administrator will be locked for editing by others until the session is published. This feature is called concurrent administration and it allows multiple administrators to work on the same security policy at the same time. However, when one administrator edits an object, such as a gateway, a rule, or a network, that object is locked for other administrators until the change is published or discarded. The lock icon shows which objects are being edited by other administrators and prevents conflicts or overwrites. [Concurrent Administration], [SmartConsole Overview]

NEW QUESTION # 221

What is the purpose of a Clean-up Rule?

- A. Used to better optimize a policy.
- **B. To drop any traffic that is not explicitly allowed.**
- C. Provide a metric for determining unnecessary rules.
- D. Clean-up Rules do not server any purpose.

Answer: B

Explanation:

A clean-up rule is a rule that is placed at the end of the security policy to drop any traffic that is not explicitly allowed by the previous rules. It is a best practice to have a clean-up rule to prevent unauthorized access and log the dropped packets for analysis¹². The other options are not the purpose of a clean-up rule. Clean-up Rule, Check Point CCSA - R81: Practice Test & Explanation

NEW QUESTION # 222

You are the Check Point administrator for Alpha Corp with an R80 Check Point estate. You have received a call by one of the management users stating that they are unable to browse the Internet with their new tablet connected to the company Wireless. The Wireless system goes through the Check Point Gateway. How do you review the logs to see what the problem may be?

- A. Open SmartView Tracker and check all the IP logs for the tablet
- B. Open SmartView Tracker and filter the logs for the IP address of the tablet
- **C. Open SmartLog and query for the IP address of the Manager's tablet**
- D. Open SmartLog and connect remotely to the IP of the wireless controller

Answer: C

Explanation:

SmartLog is a unified log viewer that provides fast and easy access to logs from all Check Point components³. It allows the administrator to query for any log field, such as the IP address of the tablet, and filter the results by time, severity, blade, action, and more⁴. SmartView Tracker is a legacy tool that displays network activity logs from Security Gateways and other Check Point devices. It does not support remote connection to the wireless controller or querying for specific IP addresses. SmartLog, SmartLog Queries, [SmartView Tracker]

NEW QUESTION # 223

The "Hit count" feature allows tracking the number of connections that each rule matches. Will the Hit count feature work independently from logging and Track the hits even if the Track option is set to "None"?

- A. No, it will not work independently because hit count requires all rules to be logged
- **B. Yes, it will work independently because when you enable Hit Count, the SMS collects the data from supported Security Gateways**
- C. Yes, it will work independently as long as "analyze all rules" tick box is enabled on the Security Gateway
- D. No, it will not work independently. Hit Count will be shown only for rules with Track options set as Log or alert

Answer: B

Explanation:

The Hit count feature will work independently from logging and track the hits even if the Track option is set to "None"¹, p. 23. When you enable Hit Count, the Security Management Server collects the data from supported Security Gateways and displays the number of connections that each rule matches in SmartConsole³.
