- B. Compliance standard

- C. Malware
- D. Personally identifiable information
- E. Malicious IP

Answer: A,C,D

Explanation:

Palo Alto Networks' Enterprise DLP service and provides data classification that includes built-in data profiles with data patterns that match sensitive information such as PII, health care, financial information and Intellectual Property. In addition to protecting your confidential and sensitive data, your data is also protected against threats-known and unknown (zero-day) malware-using the Palo Alto Networks' WildFire service.

NEW QUESTION # 153

What is the maximum number of access keys a user can generate in Prisma Cloud with a System Admin role?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: D

Explanation:

Reference: <https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin/manage-prisma-cloud-administrators/create-access-keys.html#:~:text=You%20can%20enable%20API%20access,generate%20one%20access%20key%20only>

In Prisma Cloud, a user with a System Admin role can generate a maximum of 2 access keys. These keys are used for API access and automation, enabling secure and controlled interactions with Prisma Cloud's capabilities.

NEW QUESTION # 154

What is the primary purpose of Prisma Cloud Code Security?

- A. To triage alerts and incidents in realtime during deployment
- B. To address cloud infrastructure misconfigurations in code before they become alerts or incidents
- C. To offer instant feedback on application performance issues and bottlenecks
- D. To provide a platform for developers to create custom security policies for applications

Answer: B

Explanation:

Prisma Cloud Code Security is designed to integrate security into the DevOps process by scanning infrastructure as code (IaC) templates and configurations for potential security issues. This proactive approach allows developers and security teams to address misconfigurations and vulnerabilities in the code itself, before they are deployed into the cloud environment and become more challenging to resolve. By identifying and rectifying these issues early in the development lifecycle, organizations can reduce the risk of alerts and incidents arising from misconfigurations in their cloud infrastructure, leading to a more secure and compliant cloud environment.

NEW QUESTION # 155

The development team wants to fail CI jobs where a specific CVE is contained within the image. How should the development team configure the pipeline or policy to produce this outcome?

- A. Set the specific CVE exception as an option using the magic string in the Console.
- B. Set the specific CVE exception as an option in Jenkins or twistcli.
- C. Set the specific CVE exception as an option in Defender running the scan.
- D. Set the specific CVE exception in Console's CI policy.

Answer: D

Explanation:

Reference tech docs: https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin-compute/continuous_integration/set_policy_ci_plugins.html

Vulnerability rules that target the build tool can allow specific vulnerabilities by creating an exception and setting the effect to 'ignore'. Block them by creating an exception and setting the effect to 'fail'. For example, you could create a vulnerability rule that explicitly allows CVE-2018-1234 to suppress warnings in the scan results.

To fail CI jobs based on a specific CVE contained within an image, the development team should configure the policy within Prisma Cloud's Console, specifically within the Continuous Integration (CI) policy settings.

By setting a specific CVE exception in the CI policy, the team can define criteria that will cause the CI process to fail if the specified CVE is detected in the scanned image. This approach allows for granular control over the build process, ensuring that images with known vulnerabilities are not promoted through the CI/CD pipeline, thereby maintaining the security posture of the deployed applications. This method is in line with best practices for integrating security into the CI/CD process, allowing for automated enforcement of security standards directly within the development pipeline.

NEW QUESTION # 156

Which statement is true about obtaining Console images for Prisma Cloud Compute Edition?

- A. To retrieve Prisma Cloud Console images using URL auth:1.Access registry-auth.twistlock.com, and authenticate using the user certificate.2.Retrieve the Prisma Cloud Console images using 'docker pull'.
- B. To retrieve Prisma Cloud Console images using basic auth:1.Access registry.paloaltonetworks.com, and authenticate using 'docker login'.2.Retrieve the Prisma Cloud Console images using 'docker pull'.
- C. To retrieve Prisma Cloud Console images using URL auth:1.Access registry-url-auth.twistlock.com, and authenticate using the user certificate.2.Retrieve the Prisma Cloud Console images using 'docker pull'.
- **D. To retrieve Prisma Cloud Console images using basic auth:1.Access registry.twistlock.com, and authenticate using 'docker login'.2.Retrieve the Prisma Cloud Console images using 'docker pull'.**

Answer: D

Explanation:

Retrieving Prisma Cloud Console images involves accessing a specific registry provided by Palo Alto Networks and authenticating using basic authentication with 'docker login'. Once authenticated, the user can pull the Prisma Cloud Console images using the 'docker pull' command. This process is part of the initial setup for deploying Prisma Cloud Console in an environment, allowing users to obtain the necessary images to run the Console, which serves as the central management interface for Prisma Cloud. The detailed steps, including the specific registry URL and authentication method, are typically provided in the Prisma Cloud documentation, ensuring that users have the information needed to successfully retrieve and deploy Console images.
