

# Valid JN0-105 Vce Dumps - 100% Unparalleled Questions Pool

P.S. Free & New JN0-105 dumps are available on Google Drive shared by GetValidTest: <https://drive.google.com/open?id=1gzz2q07Yal7pzTCw2jLzeMJJJLup-5tH>

Have you learned GetValidTest Juniper JN0-105 exam dumps? Why do the people that have used GetValidTest dumps sing its praises? Do you really want to try it whether it have that so effective? Hurry to click GetValidTest.com to download our certification training materials. Every question provides you with demo and if you think our exam dumps are good, you can immediately purchase it. After you purchase JN0-105 Exam Dumps, you will get a year free updates. Within a year, only if you would like to update the materials you have, you will get the newer version. With the dumps, you can pass Juniper JN0-105 test with ease and get the certificate.

## Juniper JN0-105 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Routing Policy and Firewall Filters: The topic of Routing Policy and Firewall Filters covers routing policy and firewall filters on Junos devices. Furthermore, the topic also deals with routing policies and firewall filters on a Junos device.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Networking Fundamentals: The topic networking fundamentals covers identifying the concepts and functionality of different fundamental elements of networking.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Routing Fundamentals: This topic discusses pointing out basic routing concepts or functionality for Junos devices. Moreover, the topic also describes configuring or monitoring basic routing elements for a Junos device.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>User Interfaces: This topic delves into identifying the concepts, operation, or functionality of the Junos user interface.</li></ul>

Topic 5	<ul style="list-style-type: none"><li>• Operational Monitoring and Maintenance: Different methods of monitoring or maintaining Junos devices are identified in this topic. Lastly, it discusses monitoring or maintenance procedures for a Junos device.</li></ul>

## New Juniper JN0-105 Braindumps, Valid JN0-105 Test Pdf

What are you waiting for? Unlock your potential and download GetValidTest actual JN0-105 questions today! Start your journey to a bright future, and join the thousands of students who have already seen success by using Juniper Dumps of GetValidTest, you too can achieve your goals and get the Juniper JN0-105 Certification of your dreams. Take the first step towards your future now and buy JN0-105 exam dumps. You won't regret it!

### Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q69-Q74):

#### NEW QUESTION # 69

Which two actions happen when multiple users issue the configure exclusive command to enter configuration mode on a Junos device? (Choose two.)

- A. The candidate configuration is unlocked.
- B. The candidate configuration is locked.
- C. Other users can enter configuration mode.
- D. Other users cannot enter configuration mode.

**Answer: B,D**

Explanation:

In Junos OS, when a user issues the configure exclusive command, it locks the candidate configuration for that user, preventing other users from making concurrent configuration changes. This exclusive lock ensures that configuration changes are managed in a controlled manner, reducing the risk of conflicting changes. As a result, while one user is in exclusive configuration mode, other users are prevented from entering configuration mode until the lock is released, either by the user committing the changes or exiting configuration mode.

#### NEW QUESTION # 70

By default, how does the PFE manage unicast traffic destined for an existing forwarding table entry?

- A. It sends the traffic through multiple ports toward its destination.
- B. It sends all traffic to the control plane for further processing.
- C. It sends the traffic through the fxpl interface to the RE.
- D. It sends the traffic through one port toward its destination.

**Answer: D**

Explanation:

In a Juniper Networks device, the Packet Forwarding Engine (PFE) processes unicast traffic by forwarding it according to the existing entries in the forwarding table. When the PFE encounters unicast traffic destined for an address that has a corresponding entry in the forwarding table, it directs the traffic through a specific outgoing interface or port toward its destination. This process is based on the most efficient path determined by the routing protocols in use, ensuring that the packet reaches its intended destination through a singular path, unless specific configurations such as load balancing are in place.

#### NEW QUESTION # 71

An administrator configures a router's interface with an IPv4 address and subnet mask. The administrator also confirms that this interface is in an up state.

In this scenario, which two route types are created on the local router? (Choose two.)

- A. a dynamic route

- B. a local route
- C. a direct route
- D. a static route

**Answer: B,C**

Explanation:

When an interface on a router is configured with an IPv4 address and is in an up state, two types of routes are automatically created in the routing table: a local route and a direct route, making B and D the correct answers. The local route represents the interface's IP address itself, indicating that the router can directly receive packets addressed to this IP. The direct route represents the subnet or network segment to which the interface is connected, indicating that the router can directly forward packets to destinations within this subnet.

### NEW QUESTION # 72

Which command modifier would you use to see all possible completions for a specific command?

- A. |
- B. extensive
- C. detail
- D. ?

**Answer: D**

Explanation:

In Junos OS, the ? command modifier is used to display all possible completions for a specific command. This helps users understand the available options and syntax for a command they are trying to use.

### NEW QUESTION # 73

You are creating a new policy to accept and redistribute routes into your IGP.

In this scenario, which match criteria would you use to identify the route prefixes to select?

- A. route-filter
- B. route-type
- C. instance
- D. neighbor

**Answer: A**

Explanation:

When creating a new policy to accept and redistribute routes into your Interior Gateway Protocol (IGP), the route-filter match criteria is used to identify the route prefixes to select. The route-filter statement specifies which prefixes should be matched in a policy. This allows for precise control over which routes are accepted and redistributed, facilitating efficient and secure routing policies within the network.

Reference:

"show | display set | match ge-0/0/2" indicating command examples and match criteria from Useful Juniper Commands.txt.  
Juniper official documentation: Routing Policy and Firewall Filters Configuration Guide.

### NEW QUESTION # 74

.....

With the Juniper JN0-105 PDF questions file, you can prepare for the Juniper JN0-105 test on the go since the format is portable and works with all smart devices. The Juniper JN0-105 probable exam questions in PDF save you time so that you do not have to go through sleepless nights owing to a tight daily routine.
