Archer-Expert試験の準備方法 | 権威のあるArcher-Expert資格認定試験 | 信頼できるArcher Certified Administrator-Expertファンデーション

ArcherのArcher Certified Administrator-Expertの実際のテストは、さまざまな分野の多くの専門家によって設計され、顧客のさまざまな状況を考慮し、顧客が時間を節約できるように実用的な学習教材を設計しました。あなたが学生であろうとオフィスワーカーであろうと、JPNTestあなたはArcher Certified Administrator-Expert試験の準備にすべての時間を費やすわけではなく、Archer-Expert専門知識の勉強、家事、子供の世話などに従事していると信じています。簡素化された情報により、効率的にArcher-Expert学習することができます。そして、あなたは事前に本当の試験を感じたいですか? 「はい」と答えた場合、Archer Certified Administrator-Expert試験クイズのソフトウェアバージョンを使用してみてください。ソフトウェアバージョンは実際のテスト環境をシミュレートできるため、ソフトウェアバージョンが最適な選択肢になると思います。ソフトウェアバージョンごとにArcher Certified Administrator-Expert試験の雰囲気事前に感じるすることができます。

Archer Certified Administrator-Expert 認定 Archer-Expert 試験問題 (Q58-Q63):

質問 # 58

What is the first step in creating a calculated field?

- A. Writing the calculation formula in Archer
- **B. Enable the calculated field option from the field's properties**
- C. Creating a User/Groups List field
- D. Validating your formula

正解: B

解説:

In the Archer platform, a "Calculated Field" is not a separate field type you select from the initial list (like Text or Date). Instead, almost any standard field type can be transformed into a calculated one. According to the Archer Administration II curriculum, the foundational step is to create the field first and then go into the field's General Tab properties to check the box labeled "Calculate its value." Once this option is enabled, the "Formula" and "Calculation Properties" tabs appear, allowing the administrator to define the logic. You cannot write a formula (Option A) or validate it (Option D) until the field has been designated as a calculated field. Option C is irrelevant as a "first step," as calculations can be applied to many field types, not just User/Groups lists. By enabling the calculation property first, you signal to the Archer Calculation Engine that this field's value will be managed by the system rather than by manual user input.

質問 # 59

Which would be an accurate function(s) description for Archer LDAP Synchronization?

- A. Only associates Archer users/groups with domain users/groups
- **B. Updates user profile data and deactivates accounts based on LDAP changes**
- C. Only creates accounts for new users found on the LDAP server
- D. None of these answers are correct

正解: B

解説:

This question reinforces a critical security concept in Archer Administration II . LDAP Synchronization is not just a "one-time" user creation tool; it is a lifecycle management service. While it does create accounts and associate groups, its most vital ongoing function is the synchronization of state .

If a user's title changes in Active Directory, the next LDAP sync will update that title in Archer, ensuring that reports and workflows based on user attributes remain accurate. Furthermore, if a user is removed from the corporate directory, the LDAP sync identifies them as a "Missing Person" based on the administrator's configuration and can automatically deactivate the Archer account. This automated deactivation is a core compliance requirement for most organizations to ensure that terminated employees lose access to sensitive GRC data immediately. Options A and C are incorrect because they use the word "Only," which ignores the broader, dynamic maintenance capabilities of the service.

質問 # 60

Which of the following is TRUE about limiting the number of records in your search results using the Advanced Search feature?

- **A. You can either limit results to a specific number of records or a percentage of the total number of records.**
- B. You cannot limit the number of records in your search results without the use of filters.
- C. You can only limit results to a specific number of records.
- D. You can only limit results to a percentage of the total number of records.

正解: A

解説:

Archer's Advanced Search provides sophisticated control over how data is returned to the user. Within the search configuration tabs, there is a section dedicated to Result Limits . As detailed in the Archer Administration II search module, this feature is essential for optimizing performance and creating specific types of reports (like "Top 10" or "Bottom 5%").

The administrator has the flexibility to limit the results in two ways:

* Fixed Number: For example, "Show only the first 50 records."

* Percentage: For example, "Show only the top 10% of records."

This is often combined with sorting; if you sort by "Risk Score" descending and limit the results to the top 10 records, you have successfully created a "Top 10 Risks" report. These limits are applied after the filters have narrowed down the dataset but before the data is rendered in the UI or exported. This dual-capability ensures that administrators can build reports that meet precise business requirements, whether they are based on a specific count or a statistical distribution.

質問 # 61

Your organization has recently bought a new Archer use case. What steps need to be taken in order to gain access to the new use case in your environment?

- A. Update the license key within Archer Control Panel.
- B. Contact your account manager who will give you access to the necessary files.
- C. Nothing, the use case will automatically appear after purchase.
- D. Perform an upgrade of Archer

正解: A

解説:

Archer's functionality is governed by a License Key . As taught in Archer Administration II , all the code for all use cases usually exists within the installer, but they are "locked" based on your organization's specific entitlements.

When a new use case is purchased, Archer provides a new alphanumeric license key. The System Administrator must log into the Archer Control Panel (ACP) , navigate to the "Instance" settings, and update the license key field. Once saved, the new use case-including its applications, workflows, and reports-becomes available for installation or activation. You do not need to perform a full system upgrade (Option C) or wait for a "push" from Archer (Option B). While you may need to download the specific Package File (.zip) for the use case from the Archer Community, the "step to gain access" and unlock the rights within your specific instance is the application of the license key in the ACP.

質問 # 62

Which service must be installed and enabled on all Web and Services Servers?

- A. Archer Queuing Service
- B. Archer Core Service
- C. Archer Configuration Service
- D. Archer Workflow Service

正解: C

解説:

In a distributed (multi-host) Archer environment, the Archer Configuration Service is the most critical underlying component that must exist on every server in the web and services tiers. As taught in Archer Administration II , this service is responsible for "registering" the server with the Archer Control Panel (ACP) .

The Configuration Service allows the central ACP to communicate with each node in the cluster to manage settings, update the nlog.config files, and ensure that all servers are using the correct database connection strings. While the Queuing Service (Option C) might only reside on the Services server, and the Workflow Service (Option B) is specific to AWF tasks, the Configuration Service is the "heartbeat" that connects any given Archer server to the instance's central management framework. If this service is stopped on a web server, that server will effectively become "orphaned" and will not be able to process user requests correctly or receive updates from the ACP.
