

C-IBP-2502 Deutsch, C-IBP-2502 Vorbereitung

Außerdem sind jetzt einige Teile dieser ZertSoft C-IBP-2502 Prüfungsfragen kostenlos erhältlich: https://drive.google.com/open?id=1h_t5VdTgGjZQd6HZG7FQB5njaDRndSaQ

Fühlen Sie sich schmerzvoll, wenn Sie so viele IT-Zertifizierungen und Zertifizierungsunterlagen sehen? Was sollen Sie machen? Welche Prüfung und welche Prüfungsunterlage sollen Sie wählen? Wir ZertSoft können die geeignete Prüfungen für Sie wählen, wenn Sie wissen nicht, wie sich zu entscheiden. Sie können jetzt sehr populäre SAP C-IBP-2502 Zertifizierungsprüfung wählen. Diese Zertifizierung hat viele Vorteile. Außerdem, wenn Sie sehr effektiv die Prüfung vorbereiten, können Sie sich für SAP C-IBP-2502 Dumps von ZertSoft entscheiden. Es ist die beste Methode für dich, diese SAP C-IBP-2502 Prüfung einfach zu bestehen.

SAP C-IBP-2502 Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Demand Planning: This section measures the skills of demand planners and focuses on the core concepts of demand planning. It includes understanding forecasting techniques, demand sensing, and demand propagation. Candidates are tested on their ability to manage demand signals and align planning with business objectives.
Thema 2	• General Configuration of a Planning Area: This section is aimed at SAP solution consultants and covers the configuration of a planning area. It includes defining key planning parameters, setting up structures, and ensuring the system is configured to meet business needs. Candidates will be tested on their ability to customize planning areas for optimal performance.
Thema 3	• User Interface: This section assesses the knowledge of business users in navigating and utilizing the SAP interface effectively. It covers how to interact with different features, customize views, and leverage UI functionalities for efficient planning and reporting. Candidates are expected to demonstrate proficiency in accessing and interpreting data within the system.
Thema 4	• Planning Operators & Application: Jobs This section is designed for demand planners and focuses on the configuration and execution of planning operators and application jobs. It includes an understanding of how these tools automate planning processes and improve system performance. Candidates will be tested on their ability to configure and execute jobs that support various planning functions.
Thema 5	• Solution Architecture & Data Integration: his exam section is aimed at solution architects who work with SAP data integration. It covers the fundamental concepts of integrating external data sources with SAP, ensuring seamless data flow between systems. Candidates need to understand how to maintain system architecture for optimized performance and reliability.
Thema 6	• Model Supply Processes: This section assesses the expertise of supply chain planners in designing and managing supply processes. It includes setting up sourcing, inventory management, and supply constraints. Candidates will be evaluated on their ability to model supply networks and optimize resource allocation.

Thema 7	• Model Sales & Operations Processes: This section targets operations managers and evaluates knowledge of sales and operations planning. It covers the alignment of supply and demand, scenario planning, and decision-making processes to optimize operational efficiency. Candidates will be assessed on their ability to configure models that support strategic business goals.
Thema 8	• Analytics and Reporting: This section evaluates the expertise of reporting specialists in generating and interpreting reports within SAP. It covers key analytical tools and reporting functions that provide insights into planning performance. Candidates will be assessed on their ability to extract, analyze, and present data effectively to support business decisions.
Thema 9	• Master Data: This section is relevant to master data specialists and focuses on managing essential data for planning activities. It includes an understanding of product, location, and resource master data within SAP. Candidates will be tested on how to maintain accurate and consistent data to support planning functions.

SAP C-IBP-2502: SAP Certified Associate - SAP IBP for Supply Chain braindumps PDF & Testking echter Test

Die Konkurrenz in unserer Gesellschaft wird immer heftiger. Unsere ZertSoft ist noch bei vielen Prüfungskandidaten sehr beliebt, weil wir immer vom Standpunkt der Teilnehmer die Softwaren entwickeln. Z.B. die gut gekaufte SAP C-IBP-2502 Prüfungssoftware wird von unserem professionellem Team entwickelt mit großer Menge Forschung der SAP C-IBP-2502 Prüfung. Obwohl wir eine volle Rückerstattung für die Verlust des Tests versprechen, bestehen fast alle Kunde SAP C-IBP-2502, die unsere Produkte benutzen. Was beweist die Vertrauenswürdigkeit und die Effizienz unserer SAP C-IBP-2502 Prüfungsunterlagen.

SAP Certified Associate - SAP IBP for Supply Chain C-IBP-2502 Prüfungsfragen mit Lösungen (Q32-Q37):

32. Frage

As an architect, you are configuring the Planner Workspaces user interface settings. Which appearance settings are on your to-do list? Note: There are 3 correct answers to this question.

- A. Add custom alerts
- B. Adding planning view
- C. Add playbooks for alerts
- D. Add Navigation profile
- E. Define key figure formatting

Antwort: A,B,C

Begründung:

The Planner Workspaces app in SAP IBP is a Fiori-based UI that integrates planning tools, analytics, and alerts. Configuring its appearance involves customizing the layout and functionality for planners, as per SAP IBP's official documentation.

* Option A: Adding planning view This is correct. Planner Workspaces allows embedding planning views (e.g., from Excel templates) as components, a key appearance setting to display data, per SAP IBP's workspace configuration guides.

* Option B: Add Navigation profile This is incorrect. "Navigation profile" is not a standard term in Planner Workspaces settings. Navigation is managed via Fiori launchpad roles, not workspace-specific appearance.

* Option C: Define key figure formatting This is incorrect. Key figure formatting (e.g., decimals, units) is configured in the Planning Areas app or Excel add-in, not directly in Planner Workspaces' appearance settings.

* Option D: Add custom alerts This is correct. Custom alerts (e.g., threshold-based notifications) can be added to Planner Workspaces, enhancing visibility of issues, a supported appearance feature, per SAP IBP's documentation.

* Option E: Add playbooks for alerts This is correct. Playbooks (guided actions for alerts) can be embedded in Planner Workspaces, customizing the UI to support decision-making, per SAP IBP's alert management features.

Thus, A, D, and E are appearance settings for Planner Workspaces, per SAP IBP's official capabilities.

33. Frage

Which processes are embedded in the sample planning areas SAP6 and SAP3?

- A. SAP6 Demand Planning and Sensing, and SAP3 Control Tower
- B. SAP6 Control Tower, and SAP3 Sales and Operations Planning and Supply Planning
- C. SAP6 Sales and Operations Planning and Supply Planning, and SAP3 Inventory Planning
- **D. SAP6 Demand Planning and Sensing, and SAP3 Inventory Planning**

Antwort: D

Begründung:

SAP IBP provides sample planning areas (e.g., SAPIBP1, SAP3, SAP6) with preconfigured processes to demonstrate module-specific functionality.

* SAP6: Focused on Demand Planning and Sensing, enhancing short-term demand forecasts.

* SAP3: Focused on Inventory Optimization, managing multi-stage inventory targets.

* Option A: SAP6 Control Tower, and SAP3 Sales and Operations Planning and Supply Planning This is incorrect. SAP6 is not Control Tower-specific (that's SAP8), and SAP3 focuses on Inventory Optimization, not broad S&OP or Supply Planning.

* Option B: SAP6 Demand Planning and Sensing, and SAP3 Control Tower This is incorrect. SAP3 is Inventory Optimization, not Control Tower, which is a separate module (SAP8).

* Option C: SAP6 Demand Planning and Sensing, and SAP3 Inventory Planning This is correct.

SAP6 includes Demand Planning (statistical forecasting) and DemandSensing (short-term adjustments), while SAP3 focuses on Inventory Planning (e.g., safety stock optimization), matching their official purposes per SAP IBP's sample content documentation.

* Option D: SAP6 Sales and Operations Planning and Supply Planning, and SAP3 Inventory Planning This is incorrect. SAP6 is narrower (Demand Planning/Sensing), not full S&OP or Supply Planning (more aligned with SAPIBP1). SAP3 is correct for Inventory Planning.

Thus, C accurately reflects the processes in SAP6 and SAP3, per SAP IBP's sample planning area definitions.

34. Frage

You want to display and edit data in different Units of Measure (UOM). Which of the following must you consider before you use the UOM? Note: There are 3 correct answers to this question.

- A. Units of measure are usually not time-independent
- **B. Units of measure are usually not time-dependent**
- C. Conversion to the target unit of measure is handled by the SAP IBP Excel add-in
- **D. Units of measure are an attribute of a master data type, such as Product**
- **E. Analytics allow the user to select the target unit of measure**

Antwort: B,D,E

Begründung:

Units of Measure (UOM) in SAP IBP allow data to be displayed and edited in different units (e.g., kg, lbs), configured via master data and UI settings, per SAP IBP's documentation.

* Option A: Analytics allow the user to select the target unit of measure This is correct. Analytics apps (e.g., Advanced Dashboards) and Excel planning views let users choose the target UOM for display, leveraging conversion factors, per SAP IBP's visualization capabilities.

* Option B: Units of measure are usually not time-independent This is incorrect. UOMs are typically static (time-independent) unless explicitly modeled as time-dependent (rare), making this a misstatement.

* Option C: Units of measure are an attribute of a master data type, such as Product This is correct.

UOM (e.g., Base UOM) is an attribute of the Product master data type, with conversion factors defined in UOM Conversion master data, per SAP IBP's setup.

* Option D: Units of measure are usually not time-dependent This is correct. UOMs are generally static attributes, not varying by time unless custom-configured, aligning with SAP IBP's standard behavior.

* Option E: Conversion to the target unit of measure is handled by the SAP IBP Excel add-in This is incorrect. While the Excel add-in displays converted values, the conversion logic is defined in the planning area (via UOM Conversion factors), not handled solely by the add-in.

Thus, A, C, and D are key considerations, per SAP IBP's official UOM handling.

35. Frage

You are implementing SAP IBP for sales and operations and are researching forecast model algorithms. What are some of the

algorithms that can be used? Note: There are 2 correct answers to this question.

- A. Naive models algorithms
- B. Trend models algorithms
- C. Data-cleansing algorithms
- D. Sporadic demand models algorithms

Antwort: A,B

Begründung:

SAP IBP for Sales and Operations Planning (S&OP) includes demand planning with various statistical forecast algorithms to predict demand in time-series planning.

* Option A: Data-cleansing algorithms This is incorrect. Data cleansing (e.g., outlier correction) is a preprocessing step, not a forecast model algorithm in SAP IBP's demand planning engine.

* Option B: Trend models algorithms This is correct. Trend models (e.g., linear regression, Holt's method) are supported in SAP IBP to forecast demand with consistent growth or decline patterns, per official demand planning documentation.

* Option C: Sporadic demand models algorithms This is incorrect. While sporadic demand (intermittent) is handled (e.g., via Croston's method), it's not a distinct category in SAP IBP's standard algorithm list; it falls under broader models.

* Option D: Naive models algorithms This is correct. Naive models (e.g., simple moving average, last period's demand) are basic forecast algorithms in SAP IBP, used for stable demand patterns, per SAP's forecast model library.

Thus, B and D are valid forecast algorithms in SAP IBP for S&OP, per official documentation.

36. Frage

What option is available for the key figure that is enabled for fixing?

- A. You can change a fixed key figure only with administrative rights
- B. Fixing is possible for a certain period, including all child values in the hierarchy
- C. Fixing is possible for a part of a key figure value on a certain planning level
- D. Fixing is possible for key figures with negative values

Antwort: B

Begründung:

Key figure fixing in SAP IBP allows planners to lock values (e.g., in Excel) to prevent changes during planning runs, a feature in time-series planning.

* Option A: Fixing is possible for key figures with negative values This is incorrect. Fixing applies to any value (positive, negative, zero), but this isn't a specific option or limitation in SAP IBP's fixing functionality.

* Option B: Fixing is possible for a part of a key figure value on a certain planning level This is incorrect. Fixing locks the entire value at a planning level, not a portion of it. Partial adjustments require separate key figures or manual edits before fixing.

* Option C: You can change a fixed key figure only with administrative rights This is incorrect. Fixed key figures can be unfixed or edited by users with appropriate planning permissions, not just administrators, via the Excel UI.

* Option D: Fixing is possible for a certain period, including all child values in the hierarchy This is correct. In SAP IBP, fixing a key figure (e.g., Demand Plan Qty) for a period locks that value and propagates the fix to all child levels in the hierarchy (e.g., disaggregated Product-Customer combinations), ensuring consistency, as per SAP IBP's fixing documentation.

Thus, D is the correct option for key figure fixing, reflecting SAP IBP's hierarchical locking mechanism.

37. Frage

.....

Sie haben schon die Prüfungsmaterialien zur SAP C-IBP-2502 Zertifizierung von ZertSoft gesehen. Es ist doch Zeit, eine Wahl zu treffen. Sie können auch andere Produkte wählen, aber unser ZertSoft wird Ihnen die größten Interessen bringen. Mit ZertSoft werden Sie eine glänzende Zukunft haben, eine bessere Berufsaussichten in der IT-Branche haben und effizient arbeiten.
