

Google Associate Cloud Engineer Exam Sample Questions (Q36-Q41):

NEW QUESTION # 36

You are about to start working on a micro-service deployment project using Google Kubernetes Engine service. The client needs everything on Google and want you to maintain both frontend and backend code on Google Cloud as well. Which service best suites this case?

- A. GitHub
- B. Google Container Registry
- C. Cloud Storage
- **D. Cloud Source Repository**

Answer: D

NEW QUESTION # 37

You created a Google Cloud Platform project with an App Engine application inside the project.

You initially configured the application to be served from the us-central region. Now you want the application to be served from the asia-northeast1 region. What should you do?

- A. Change the region property setting in the existing App Engine application from us-central to asia-northeast1.
- B. Create a second App Engine application in the existing GCP project and specify asia-northeast1 as the region to serve your application.
- **C. Create a new GCP project and create an App Engine application inside this new project. Specify asia-northeast1 as the region to serve your application.**
- D. Change the default region property setting in the existing GCP project to asia-northeast1.

Answer: C

Explanation:

Each Cloud project can contain only a single App Engine application, and once created you cannot change the location of your App Engine application.

NEW QUESTION # 38

You need to configure IAM access audit logging in BigQuery for external auditors. You want to follow Google-recommended practices. What should you do?

- A. Add the auditors group to two new custom IAM roles.
- B. Add the auditor user accounts to two new custom IAM roles.
- **C. Add the auditor user accounts to the 'logging.viewer' and 'bigQuery.dataViewer' predefined IAM roles.**
- D. Add the auditors group to the 'logging.viewer' and 'bigQuery.dataViewer' predefined IAM roles.

Answer: C

Explanation:

<https://cloud.google.com/iam/docs/roles-audit-logging>

NEW QUESTION # 39

A customer is deploying a production portal application on AWS. The database tier has structured data. The company requires a solution that is easily manageable and highly available.

How can these requirements be met?

- A. Use RDS with a single Available Zone option and schedule periodic database snapshots.
- B. Deploy the database on multiple Amazon EC2 instances backed by Amazon EBS across multiple Availability Zones.
- C. Use Amazon DynamoDB.
- **D. Use Amazon RDS with a multiple Availability Zone option.**

Answer: D

Explanation:

Explanation/Reference: <https://aws.amazon.com/rds/>

NEW QUESTION # 40

Your company has a 3-tier solution running on Compute Engine. The configuration of the current infrastructure is shown below.

Each tier has a service account that is associated with all instances within it. You need to enable communication on TCP port 8080 between tiers as follows:

* Instances in tier #1 must communicate with tier #2.

* Instances in tier #2 must communicate with tier #3.

What should you do?

- A. 1. Create an ingress firewall rule with the following settings:* Targets: all instances with tier #2 service account* Source filter: all instances with tier #1 service account* Protocols: allow TCP:8080. Create an ingress firewall rule with the following settings:* Targets: all instances with tier #3 service account* Source filter: all instances with tier #2 service account* Protocols: allow TCP: 8080
- B. 1. Create an ingress firewall rule with the following settings:* Targets: all instances with tier #2 service account* Source filter: all instances with tier #1 service account* Protocols: allow all. Create an ingress firewall rule with the following settings:* Targets: all instances with tier #3 service account* Source filter: all instances with tier #2 service account* Protocols: allow all
- C. 1. Create an egress firewall rule with the following settings:* Targets: all instances* Source filter: IP ranges (with the range set to 10.0.2.0/24)* Protocols: allow TCP: 8080. Create an egress firewall rule with the following settings:* Targets: all instances* Source filter: IP ranges (with the range set to 10.0.1.0/24)* Protocols: allow TCP: 8080
- D. 1. Create an ingress firewall rule with the following settings:* Targets: all instances* Source filter: IP ranges (with the range set to 10.0.2.0/24)* Protocols: allow all. Create an ingress firewall rule with the following settings:* Targets: all instances* Source filter: IP ranges (with the range set to 10.0.1.0/24)* Protocols: allow all

Answer: A

Explanation:

1. Create an ingress firewall rule with the following settings: "*" Targets: all instances with tier #2 service account "*" Source filter: all instances with tier #1 service account "*" Protocols: allow TCP:8080 2. Create an ingress firewall rule with the following settings: "*" Targets: all instances with tier #3 service account "*" Source filter: all instances with tier #2 service account "*" Protocols: allow TCP: 8080
