You will get a handful of knowledge about topics that will benefit your professional career.

WGU Web Development Applications Sample Questions (Q46-Q51):

NEW QUESTION # 46

Given the following code:

`<input type="text" pattern="-?\d{1,3}\.\d+" placeholder="Enter latitude or longitude">` Which type of user input does the developer request by specifying the pattern attribute?

- A. Latitude/longitude
- B. Country code
- C. price
- D. Date

Answer: A

Explanation:

The pattern attribute in the `<input>` element is used to specify a regular expression that the input's value must match for it to be considered valid. The given pattern `-?\d{1,3}\.\d+` matches strings that represent decimal numbers with an optional negative sign, typically used for latitude and longitude values.

* Pattern Explanation:

* `-?` allows for an optional negative sign.

* `\d{1,3}` matches one to three digits.

* `\.` matches a literal dot.

* `\d+` matches one or more digits.

* Usage Example:

`<input type="text" pattern="-?\d{1,3}\.\d+" placeholder="Enter latitude or longitude">` This pattern ensures the input matches the format of latitude/longitude values.

NEW QUESTION # 47

Which method should a developer use to create a message that requests a user to select "OK" or "Cancel"?

- A. prompt
- B. confirm
- C. alert
- D. write

Answer: B

Explanation:

> "The `confirm()` method displays a dialog box with OK and Cancel buttons. It returns `true` if OK is selected and `false` otherwise."

>

> * `alert()` only shows a message

> * `prompt()` includes a text input field

> * `write()` outputs directly to the document

References:

* MDN Web Docs: `confirm()`

* ECMAScript Browser Dialogs

NEW QUESTION # 48

Which CSS positioning scheme should a developer use to ensure that an element remains in the same position when a user scrolls a page?

- A. Relative
- **B. Fixed**
- C. Static
- D. Absolute

Answer: B

Explanation:

The position: fixed rule anchors an element relative to the browser window. This means the element remains in the same position regardless of scrolling.

"Fixed positioning removes the element from the normal document flow and positions it relative to the viewport. As the user scrolls, the element stays in its fixed position." References:

NEW QUESTION # 49

Given the following CSS code:

□ Which type of selector is used?

- A. Class
- B. Group
- **C. ID**
- D. Element

Answer: C

Explanation:

The given CSS code uses the #name selector, which is an ID selector. The ID selector is used to style an element with a specific id attribute.

* ID Selector: In CSS, the ID selector is used to style the element with the specific id. The syntax for the ID selector is #id, where id is the id attribute value of the HTML element.

* Usage Example:

```
#name {  
text-align: left;  
}
```

This CSS rule will apply the text-align: left; style to the element with id="name".

* ID Selector Characteristics:

* An ID must be unique within a document, meaning it can be used only once per page.

* ID selectors are more specific than class selectors and element selectors.

* Example in HTML:

```
<div id="name">This is a div with ID "name".</div>
```

NEW QUESTION # 50

What does a computer use to read and execute JavaScript code?

- **A. An interpreter**
- B. A validator
- C. A compiler
- D. A virtual machine

Answer: A

Explanation:

(Same as Question 29)

JavaScript engines read and execute scripts using an interpreter, though JIT compilation may occur under the hood.
