You can contact us at any time if you have any difficulties on our C\_BCBAl\_2502 Exam Questions in the purchase or trial process. We will provide professional personnel to help you remotely on the C\_BCBAl\_2502 training guide.

### SAP Certified Associate - Positioning SAP Business AI Solutions as part of SAP Business Suite Sample Questions (Q46-Q51):

#### NEW QUESTION # 46

Which SAP solution provides a centralized platform for tracking sustainability performance? Please choose the correct answer.

- A. SAP Sustainability Control Tower
- B. SAP Fieldglass
- C. SAP Extended Warehouse Management
- D. SAP Business One

#### Answer: A

Explanation:

SAP Sustainability Control Tower is the centralized platform for tracking and managing sustainability performance across an organization. The correct answer is SAP Sustainability Control Tower, as it is explicitly designed for this purpose.

SAP documentation highlights: "SAP Sustainability Control Tower provides a centralized platform to track, measure, and manage sustainability performance, enabling organizations to achieve their environmental, social, and governance (ESG) goals." It supports "real-time monitoring of sustainability metrics, such as carbon emissions, energy consumption, and waste management," and integrates with other SAP solutions to provide a holistic view of sustainability performance. For example, it enables companies to "set and track sustainability KPIs" and "report on ESG compliance," aligning with global standards.

The incorrect options are not relevant to sustainability performance tracking. SAP Extended Warehouse Management focuses on logistics and inventory management. SAP Business One is an ERP solution for small businesses, not specifically for sustainability. SAP Fieldglass manages contingent workforce and services, not sustainability metrics. SAP Sustainability Control Tower's role in SAP's sustainability portfolio confirms its suitability as the centralized platform.

#### NEW QUESTION # 47

(What are some essential value propositions of SAP Business AI? Note: There are 3 correct answers to this question.)

- A. Training of large multi-modal foundation models based on customer-specific business data.
- B. Use of extensive business data extracted from areas including Finance, Supply Chain, Procurement, and Human Resources.
- C. Replacement of human workers with AI agents to reduce cost and human error.
- D. Use of the best technology on the market and strategic partnerships with industry leaders.
- E. Deployment of Joule, an advanced AI copilot, to help interpret business data and provide intelligent responses to business inquiries

#### Answer: B,D,E

Explanation:

Comprehensive and Detailed Explanation From Exact Extract: The essential value propositions of SAP Business AI emphasize its relevance through grounding in extensive business data across key areas like Finance, Supply Chain, Procurement, and Human Resources, reliability via utilization of leading technology and strategic collaborations with industry leaders, and transformative capabilities with tools like Joule, the advanced AI copilot that interprets business data and delivers intelligent responses to inquiries. These propositions position SAP Business AI as a solution that drives efficiency, innovation, and productivity without aiming to replace human workers but rather to augment them, while avoiding training foundation models directly on customer-specific data to

uphold privacy and ethics.

Exact extracts supporting this:

Use of extensive business data: "AI is grounded in business data and embedded into every business function, driving impact..."

Industry-specific benefits: Drives value across functions like supply chain (agile, resilient, customer-centric), procurement (optimize spend, reduce risk), finance (manage risk, ensure compliance), HR (employee engagement, faster hiring)...".sap.com "With SAP Business AI, we are building the system of intelligence with three core principles: relevant, reliable, and responsible. Relevant SAP's AI...".news.sap.com "SAP Business AI provides reliable, accurate, and secure generative AI that is grounded in customers' business data...".learning.sap.com Deployment of Joule: "AI-powered scenarios: Access to over 230 AI-powered scenarios, expanding to 400 by the end of 2025, with Joule enabling navigational and transactional tasks up to 90% faster.".sap.com "Process procurement data searches 95% faster with Joule... Speed up HR tasks 90% faster with Joule in SAP SuccessFactors... Complete sales tasks 80% faster with Joule in SAP Sales Cloud.".sap.com Use of best technology and partnerships: "SAP Business AI provides reliable, accurate, and secure... we established an AI foundation...".learning.sap.com "Reliable: built on best technology and partnerships...".news.sap.com Other options are incorrect because:

Option B: SAP does not train large multi-modal foundation models on customer-specific data; instead, it grounds AI in business data using techniques like retrieval-augmented generation (RAG) to ensure privacy, as "Customer data is not shared with third-party large language model (LLM) providers for training their models." (from related ethics, but aligned with value props focusing on secure grounding rather than training).

Option E: SAP's propositions focus on augmentation and collaboration, not replacement, as "Solve complex challenges with AI agents that securely collaborate across your entire business... Helps teams get more done faster and more efficiently with AI that understands business processes and data.".sap.com Reference from Positioning SAP Business AI Solutions as part of SAP Business Suite documents or Study Guide: Derived from the official SAP Business AI product page and SAP Learning course "Discovering SAP Business AI," specifically units on articulating the value of SAP Business AI, which highlight relevance (data grounding), reliability (tech and partnerships), and tools like Joule as core propositions for integrating AI into the SAP Business Suite. Additional support from SAP News blogs on unlocking potential with SAP Business AI, aligned with C\_BCBAL\_2502 certification materials.

#### NEW QUESTION # 48

A multinational company wants to implement AI-based fraud detection for its financial transactions. Which SAP AI solutions should they use? Note: There are 3 correct answers to this question.

- A. SAP SuccessFactors AI
- B. SAP Cloud ERP
- C. SAP Intelligent RPA
- D. SAP AI Business Services
- E. SAP Predictive Analytics

Answer: C,D,E

Explanation:

For a multinational company seeking AI-based fraud detection in financial transactions, SAP offers solutions that leverage machine learning and automation to identify and mitigate fraudulent activities. The correct answers are SAP AI Business Services, SAP Predictive Analytics, and SAP Intelligent RPA, as these solutions directly support fraud detection in financial processes.

SAP documentation explains: "SAP AI solutions can detect anomalies and patterns in financial transactions, procurement processes, and other business operations to identify potential fraud and risks." SAP AI Business Services provide "machine learning capabilities for fraud detection in finance," enabling real-time monitoring of transactions to identify suspicious activities. SAP Predictive Analytics, embedded in SAP S/4HANA, supports "AI-assisted anomaly detection" to "predict and identify unusual patterns in financial data," such as fraudulent transactions, enhancing security. SAP Intelligent RPA automates "transaction monitoring and validation processes," using AI to flag potential fraud by cross-referencing data against predefined rules, as seen in financial reconciliation workflows.

The incorrect options-SAP SuccessFactors AI and SAP Cloud ERP-are not relevant. SAP SuccessFactors AI focuses on HR processes, such as recruitment, not financial fraud detection. SAP Cloud ERP is a broad platform that may include AI but is not specifically tailored for fraud detection compared to the selected solutions. SAP's financial AI solutions, as evidenced by their use in SAP Cash Application, confirm the suitability of the chosen answers.

#### NEW QUESTION # 49

(What are some unique selling propositions of SAP Business AI? Note: There are 3 correct answers to this question.)

- A. Direct access to pertinent customer business data
- B. Robust partner ecosystem with synergistic collaboration

- C. Focus on the technology stack
- D. In-depth knowledge of business processes across various industries
- E. Development of SAP-specific large language models

**Answer: A,B,D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract: Unique selling propositions of SAP Business AI include direct access to pertinent customer business data for grounding AI in enterprise contexts, a robust partner ecosystem enabling synergistic collaborations with industry leaders for innovation, and in-depth knowledge of business processes across industries to deliver domain-specific AI solutions. These propositions emphasize SAP's strengths in data integration, partnerships, and process expertise over generic AI technologies.

Exact extracts supporting this:

Direct access to business data: "SAP's main differentiators are - it's access to business data, understanding of the context of complex business processes, and deep domain and industry expertise."community.sap.com Robust partner ecosystem "SAP Business AI serves as a key differentiator for Service Partners and offers a wide range of business opportunities."sap.com "Unparalleled collaborations with leading general-purpose AI technology providers."news.sap.com In-depth knowledge of business processes: "Understanding of the context of complex business processes, and deep domain and industry expertise."community.sap.com Other options are incorrect because:

Option B: While SAP has a strong technology stack, the focus is on business outcomes rather than the stack itself as a unique proposition; differentiators are data, processes, and ecosystem

Option D: SAP does not develop its own large language models but partners with providers like Microsoft, Google, and Cohere for LLMs, emphasizing integration over proprietary development.

Reference from Positioning SAP Business AI Solutions as part of SAP Business Suite documents or Study Guide: From SAP Learning course "Discovering SAP Business AI," unit "Articulating the Value of SAP Business AI," and SAP Community blog "Generative AI with SAP - Part 1." These highlight access to data, process knowledge, and partnerships as USPs, per C\_BCBAl\_2502 materials.

**NEW QUESTION # 50**

Drag and drop the key terms to the correct position.

□

**Answer:**

Explanation:

□

**NEW QUESTION # 51**
