

Free PDF F5CAB3 - BIG-IP Administration Data Plane Configuration Fantastic Latest Test Fee

BraindumpQuiz has gained the reputation of the many certification industry, because we have a lot of high-quality F5 F5CAB3 Exam F5CAB3 study guide, F5CAB3 exam, F5CAB3 exam answer. As the most professional supplier on the site of IT certification test currently, we provide a comprehensive after-sales service. We provide tracking services to all customers. Within one year of your purchase, enjoy free upgrades examination questions service. During this period, if F5's F5CAB3 Test Questions are modified, We will be free to provide customers with protection. F5 F5CAB3 certification exam is carefully crafted by our BraindumpQuiz IT experts. With the BraindumpQuiz of F5 F5CAB3 exam materials, I believe that your tomorrow will be better.

The second version is the web-based format of the BIG-IP Administration Data Plane Configuration (F5CAB3) practice test. Browsers such as Internet Explorer, Microsoft Edge, Firefox, Safari, and Chrome support the web-based practice exam. You don't have to install excessive plugins or software to attempt this BIG-IP Administration Data Plane Configuration (F5CAB3) practice test.

F5 F5CAB3 Pdf Version, Reliable F5CAB3 Exam Tutorial

To help candidates study and practice the F5CAB3 exam questions more interesting and enjoyable, we have designed three different versions of the F5CAB3 test engine that provides you a number of practice ways on the exam questions and answers: the PDF, Software and APP online. The PDF version can be printable. And the Software version can simulate the exam and apply in Windows system. The APP online version of the F5CAB3 training guide can apply to all kinds of the electronic devices, such as IPAD, phone, laptop and so on.

F5 BIG-IP Administration Data Plane Configuration Sample Questions (Q10-Q15):

NEW QUESTION # 10

A node is a member of multiple pools and hosts different applications. If one application becomes unavailable, only that pool member should be marked down.

What should the BIG-IP Administrator deploy?

- A. TCP monitor
- **B. HTTP monitor with custom send/receive**
- C. ICMP + TCP monitor
- D. UDP monitor

Answer: B

Explanation:

Application-level monitors ensure that only the affected service is marked down, not the entire node.

NEW QUESTION # 11

An organization is reporting slow performance accessing their Intranet website. All employees use a single Proxy Server with a public IP.

What should the BIG-IP Administrator do to fix this issue?

- A. Change Load Balancing Method to Least Connections
- B. Change Default Persistence Profile to cookie
- C. Change Source Address to proxy IP
- D. Change Fallback Persistence Profile to source_addr

Answer: B

Explanation:

When multiple users share one source IP, source-address persistence fails. Cookie persistence uniquely identifies users at Layer 7 and ensures correct session handling.

NEW QUESTION # 12

A Standard Virtual Server for a web application is configured with Automap for Source Address Translation. The original client IP must be known by backend servers.

What should the BIG-IP Administrator configure?

- A. SNAT pool using client IP
- B. Performance (HTTP) Virtual Server
- C. HTTP Transparent profile
- D. HTTP profile to insert X-Forwarded-For

Answer: D

Explanation:

The X-Forwarded-For header preserves the original client IP when SNAT is enabled.

NEW QUESTION # 13

Users are unable to reach an application. The Virtual Server shows a red diamond status in the Configuration Utility.

What is the cause?

- A. All pool members are disabled
- B. Virtual Server is disabled
- C. HTTPS traffic sent to HTTP Virtual Server
- D. All pool members are down

Answer: D

Explanation:

A red diamond indicates the Virtual Server is enabled but unavailable due to all pool members being down.

NEW QUESTION # 14

Refer to the exhibit.

General Properties Visit Us: Brave-Dumps.com

Name	VS-DNS
Partition / Path	Comm
Description	
Type	Standard <input checked="" type="checkbox"/> ®
Source Address	192.168.100.0/23
Destination Address/Mask	192.168.21.50
Service Port	53 <input type="checkbox"/> Other: <input type="checkbox"/>
Notify Status to Virtual Address	<input checked="" type="checkbox"/>
Link	None
Availability	<input checked="" type="checkbox"/> Unknown (Enabled) - The children pool member(s) eit
Syncookie Status	Off
State	Enabled <input type="checkbox"/>

Configuration: ☐ Advanced ☐

Protocol	TCP <input type="checkbox"/>
Protocol Profile (Client)	tcp <input type="checkbox"/>
Protocol Profile (Server)	(Use Client Profile) <input type="checkbox"/>

DNS queries from two internal DNS servers are being load-balanced to external DNS servers via a virtual server on a BIG-IP device. The DNS queries originate from:

192.168.10.100

192.168.10.200

and target:

192.168.2.150

All DNS queries destined for the external DNS servers fail.

Which property change should the BIG-IP Administrator make in the Virtual Server to resolve this issue? (Choose one answer)

- A. Protocol to UDP
- B. Type to Performance (HTTP)
- C. Source Address to 192.168.10.0/24
- D. Protocol profile (Client) to DNS_OPTIMIZED

Answer: A

Explanation:

DNS traffic is primarily transported using UDP port 53. In the exhibit, the Virtual Server is configured with the Protocol set to TCP, which prevents standard DNS queries from being processed correctly. BIG-IP Virtual Servers must be configured with the correct Layer 4 protocol to match the application traffic they are handling.

According to the BIG-IP Administration: Data Plane Configuration documentation:

The Protocol setting on a Virtual Server defines whether traffic is processed as TCP, UDP, or another supported transport protocol. Standard DNS queries and responses use UDP, while TCP is only required for DNS zone transfers (AXFR) or exceptionally large responses.

When a DNS Virtual Server is incorrectly configured with TCP, UDP-based DNS queries are dropped, causing all requests to fail.

Why the other options are incorrect:

A . Protocol profile (Client) to DNS_OPTIMIZED

A DNS profile enhances DNS functionality but does not correct an incorrect transport protocol configuration.

B . Type to Performance (HTTP)

Performance (HTTP) Virtual Servers are designed for HTTP traffic and are not suitable for DNS services.

C . Source Address to 192.168.10.0/24

The existing source IPs already fall within the allowed range, so this setting does not address the failure.

Changing the Protocol to UDP aligns the Virtual Server with standard DNS transport requirements, allowing DNS queries to be successfully processed and load-balanced.
