**Guidewire Reliable InsuranceSuite-Analyst Study Materials: Associate
Certification - InsuranceSuite Analyst - Mammoth Proctored Exam -
VerifiedDumps Providers you Best Reliable Test Tutorial**

The high quality and high efficiency of InsuranceSuite-Analyst study guide make it stand out in the products of the same industry. Our study materials have always been considered for the users. If you choose our InsuranceSuite-Analyst exam questions, you will become a better self. InsuranceSuite-Analyst actual exam want to contribute to your brilliant future. Our study materials are constantly improving themselves. If you have any good ideas, our study materials are very happy to accept them. InsuranceSuite-Analyst Exam Materials are looking forward to having more partners to join this family. We will progress together and become better ourselves.

Guidewire Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam Sample Questions (Q43-Q48):

NEW QUESTION # 43

How are Page Configuration Format (PCF) files used in the Guidewire development environment?

- A. They contain the schema definition for the application database.
- B. Non-developers use PCF files to perform data analysis and reporting tasks.
- **C. Developers use them to create and edit the visual components of the user interface.**
- D. They serve as automated testing scripts for validating UI functionality.
- E. Business analysts configure them to define requirements.
- **F. Developers work with them using the Guidewire Studio tool.**

Answer: C,F

Explanation:

In Guidewire InsuranceSuite, Page Configuration Format (PCF) files are a core part of the user interface configuration layer. They define the structure, layout, and behavior of screens, panels, lists, and UI components displayed to end users. Therefore, Options B and F are correct.

PCF files are used by developers to create and edit the visual components of the UI (Option B). These files control how data is presented, how users navigate between screens, and how UI elements respond to user interaction. PCF files reference entities, fields, type lists, and rules, but they do not define business logic themselves.

Developers work with PCF files using Guidewire Studio (Option F), which is the primary IDE for configuring Guidewire applications. Studio provides validation, navigation, and deployment tooling for PCF files, making it the correct environment for managing UI configuration.

The other options are incorrect. Database schema definitions are handled by the data model, not PCF files (Option A). Non-developers do not use PCF files for reporting (Option C). Business analysts document requirements but do not configure PCF files directly (Option D). PCF files are not automated test scripts (Option E).

For analysts, understanding what PCF files do and who works with them helps ensure requirements are written clearly and realistically, aligned with Guidewire UI architecture.

NEW QUESTION # 44

At the completion of Inception: (Select 2)

- A. Documented acceptance criteria is tested to ensure the who, how, and why of story cards is defined
- **B. A conceptual sprint plan is established to guide when user story cards will be built**
- C. Test cases are written to test end-to-end system functionality
- **D. A confirmed scope and estimate is completed with associated user story cards**

Answer: B,D

Explanation:

Comprehensive and Detailed Explanation (250-300 words):

The Inception phase in Guidewire SurePath is focused on planning, alignment, and validation, not execution. At the completion of Inception, two key outcomes are achieved: a confirmed scope and estimate and a conceptual sprint plan, making Options B and D correct.

A confirmed scope and estimate (Option B) ensures that stakeholders have a shared understanding of what will be delivered, supported by high-level user story cards. This reduces risk and sets realistic expectations before development begins.

A conceptual sprint plan (Option D) provides a roadmap for when stories are expected to be built. It does not assign tasks or commit teams to detailed schedules but offers directional guidance for delivery sequencing.

The remaining options are associated with later phases. Writing test cases (Option A) and validating acceptance criteria through testing (Option C) occur during development and testing iterations, not during Inception.

NEW QUESTION # 45

What features have been added to InsuranceSuite to make it more accessible to disabled users that Business Analysts should consider when making changes to the User Interface? (Choose two)

- A. User interface support with closed captions for the hearing impaired
- **B. Screen reader support with Alt text and WAI-ARIA attributes**
- C. Braille keyboard support for the visually impaired
- **D. New screen settings for user interface magnification and color contrast**

Answer: B,D

Explanation:

Guidewire InsuranceSuite includes several accessibility enhancements designed to support users with disabilities and align with modern accessibility standards. Business Analysts must be aware of these features when defining or modifying UI requirements to ensure accessibility is preserved.

One key enhancement is user interface magnification and color contrast settings (Option B). These features support users with visual impairments by allowing them to adjust screen readability without altering business functionality.

Another critical capability is screen reader support using Alt text and WAI-ARIA attributes (Option D).

These standards enable assistive technologies to interpret UI elements correctly, ensuring users who rely on screen readers can navigate and interact with the application effectively.

The other options are incorrect. Braille keyboard support (Option A) and closed-caption UI support (Option C) are not standard InsuranceSuite features.

Considering accessibility early helps analysts design inclusive solutions, avoid rework, and comply with accessibility regulations and best practices.

NEW QUESTION # 46

The objectives of Elaboration sessions during Inception are to _____ and _____.

- A. identify project resources, refine scope
- B. schedule work, define participants
- **C. demonstrate product features, update the backlog with new stories**
- D. define detailed requirements, describe story details

Answer: C

Explanation:

In a Guidewire InsuranceSuite implementation, the Inception phase establishes the foundation for the entire project. One of the most important activities within this phase is conducting Elaboration sessions, which help ensure alignment between business stakeholders, analysts, and the delivery team. These sessions are intentionally designed to focus on understanding the solution through interaction with the product rather than exhaustive documentation.

The primary objectives of Elaboration sessions during Inception are to demonstrate product features and update the backlog with new stories, making Option A the correct answer. During these sessions, analysts and implementation teams showcase Guidewire out-of-the-box functionality to business users. This enables stakeholders to see how core processes, such as policy lifecycle, claims handling, or billing operations, are supported by InsuranceSuite. Visual demonstrations help validate assumptions, clarify expectations, and reduce misunderstandings early in the project.

As product features are demonstrated, stakeholders often identify new requirements, adjustments, or enhancements. These findings are captured as new user stories or refinements to existing backlog items.

The backlog evolves based on real system capabilities rather than theoretical requirements, ensuring it reflects business value and feasibility.

The other options do not align with the purpose of Elaboration sessions. Scheduling work and defining participants (Option B) are project management activities. Defining detailed requirements and story-level specifications (Option C) typically occurs during later iterations when development begins. Identifying project resources and refining scope (Option D) are broader inception planning activities, not the focus of elaboration.

Overall, Elaboration sessions during Inception support a Guidewire-recommended, iterative approach, emphasizing early validation, stakeholder engagement, and a well-informed backlog that drives successful project delivery.

NEW QUESTION # 47

In InsuranceSuite, Page Configuration Format (PCF) files control the user interface. Which of the following are examples of common widgets used in PCF files? (Choose two)

- A. **DetailView**
- B. **NameValueView**
- C. Card
- D. MenuView
- E. TextView

Answer: A,B

Explanation:

Why this is correct

* NameValueView is a very common PCF widget used to display label-value pairs (for example, policy or claim attributes).

* DetailView is another core PCF widget used to display detailed information for an entity in a structured layout.

Why the others are not selected

* MenuView does exist in PCF, but when restricted to two choices, NameValueView and DetailView are the most fundamental and commonly referenced widgets in Guidewire training.

* Card is not a Guidewire PCF widget.

* TextView is not used as a standard standalone PCF widget in InsuranceSuite UI architecture.

NEW QUESTION # 48

.....

The third format is a web-based practice exam that is compatible with Firefox, Microsoft Edge, Safari, and Google Chrome. So the students can access it from any browser and study for Guidewire InsuranceSuite-Analyst Exam clarification. In addition, Mac, iOS, Windows, Linux, and Android support the web-based Guidewire InsuranceSuite-Analyst practice questions.
