

# Test Cloud-Digital-Leader Discount Voucher | New Exam Cloud-Digital-Leader Materials

What's more, part of that BraindumpStudy Cloud-Digital-Leader dumps now are free: <https://drive.google.com/open?id=1piOOAgegYTAoP14SG82kAWjXqzXgYpeC>

Choose the right format of Google Cloud-Digital-Leader actual questions and start Cloud-Digital-Leader preparation today. Top Notch Google Cloud-Digital-Leader Actual Dumps Are Ready for Download. Now is the ideal time to prepare for and crack the Google Cloud-Digital-Leader Exam. To do this, you just need to enroll in the Cloud-Digital-Leader examination and start preparation with top-notch and updated Google Cloud-Digital-Leader actual exam dumps.

Google Cloud Digital Leader Exam is a comprehensive and challenging test that requires candidates to have a deep understanding of cloud computing concepts and Google Cloud Platform services. Cloud-Digital-Leader Exam is ideal for professionals who are looking to enhance their career prospects in the field of cloud computing and are interested in becoming Google Cloud certified professionals.

Google Cloud Digital Leader Exam helps professionals gain recognition for their expertise in cloud technologies and services. Google Cloud Digital Leader certification represents a significant step towards building a successful career in cloud computing and provides a clear pathway for career advancement. With the exam's extensive coverage of topics and best practices, candidates become well-prepared to meet the complex demands of cloud computing, and the certificate boosts their credibility within the industry.

## New Exam Cloud-Digital-Leader Materials | Cloud-Digital-Leader Braindumps Torrent

They work together and analyze the examination content to compile most probable Cloud-Digital-Leader real dumps in three formats. These Google Certification Exams questions will surely appear in the next Google Cloud-Digital-Leader exam. Memorizing these Google Cloud-Digital-Leader Valid Dumps will help you easily attempt the Cloud-Digital-Leader exam within the allocated time. Thousands of aspirants have passed their Cloud-Digital-Leader exam, and they all got help from our Google Cloud-Digital-Leader updated exam dumps.

### Google Cloud Digital Leader Sample Questions (Q24-Q29):

#### NEW QUESTION # 24

Your team has developed a machine learning model for your customer. The test results indicate very strong predictive capability. The model is then deployed in production. Evaluation of the predictions in production show that they are off by a pronounced margin. What is the issue and how can you solve for it?

- A. The model is overfitted. Train with more data.
- B. The model is under fitted. Train with less data.
- C. The model is over fitted. Add more features to the model to fix it.

- D. The model is fine since the test results are good. Fix the production of incoming data.

**Answer: A**

Explanation:

If our ML model does well on the training set than on the production set, then we're likely over fitting. Training with more data would be one solution.

#### **NEW QUESTION # 25**

Your organization needs to establish private network connectivity between its on-premises network and its workloads running in Google Cloud. You need to be able to set up the connection as soon as possible.

Which Google Cloud product or feature should you use?

- **A. Cloud VPN**
- B. Cloud Interconnect
- C. Direct Peering
- D. Cloud CDN

**Answer: A**

Explanation:

Private Google Access for on-premises hosts provides a way for on-premises systems to connect to Google APIs and services by routing traffic through a Cloud VPN tunnel.

#### **NEW QUESTION # 26**

Your organization runs many workloads in different Google Cloud projects, each linked to the same billing account. Each project's workload costs can vary from month to month, but the overall combined cost of all projects is relatively stable. Your organization needs to optimize its cost.

What should your organization do?

- A. Purchase a commitment per project for each project's usual minimum
- **B. Turn on committed use discount sharing, and create a commitment for the combined usage**
- C. Move all workloads from all different projects into one single consolidated project
- D. Create a billing account per project, and link each project to a different billing account

**Answer: B**

Explanation:

Turn on committed use discount sharing, and create a commitment for the combined usage. Sharing your committed use discounts across all your projects reduces the overhead of managing discounts on a per-project basis, and maximizes your savings by pooling all your discounts across your projects' resource usage. If you have multiple projects that share the same Cloud Billing account, you can enable committed use discount sharing so all of your projects within that Cloud Billing account share all of your committed use discount contracts. Your sustained use discounts are also pooled at the same time. That is, sustained use discounts are calculated using the total resources across these projects, rather than just the resources within a single project.

Text Description automatically generated

## Sharing committed use discounts across projects

Sharing your committed use discounts across all your projects reduces the overhead of managing discounts on a per-project basis, and maximizes your savings by pooling all your discounts across your projects' resource usage.

If you have multiple projects that share the same Cloud Billing account, you can [enable committed use discount sharing](#) so all of your projects within that Cloud Billing account share all of your committed use discount contracts. Your sustained use discounts are also pooled at the same time. That is, sustained use discounts are calculated using the total resources across these projects, rather than just the resources within a single project.

For example, if you purchase two commitment contracts for a total of 160 cores, and you run 200 cores during the month, you will receive committed use discounts for 160 cores across the projects that used them. The additional 40 cores will be billed at on-demand, non-committed use rates. After you purchase a set amount of commitments, you're billed for those commitments monthly, even if you don't use them. For example, if you purchase commitments for 160 cores, you're billed the committed use rates for those 160 cores for the whole month, even if you don't use them. See [Understanding discount sharing](#) for cost-saving utilization recommendations.

### NEW QUESTION # 27

What DevOps practice should an organization use when developing their application to help minimize disruption caused by bugs?

- A. Pause production until all bugs have been eliminated
- **B. Implement small changes incrementally to reduce recovery time when bugs appear**
- C. Prioritize fixing large bugs during production because they are easier to review
- D. Implement large changes together to make rolling back easier when bugs appear

**Answer: B**

Explanation:

One of the key principles of DevOps is to release changes frequently and in small batches. This helps to reduce the risk of disruption caused by bugs. If a bug is introduced in a small change, it is easier to identify and fix the bug without affecting a large number of users.

### NEW QUESTION # 28

The CFO is attending one of the preliminary meetings in the migration strategy meeting. She brings up the concern about costs. They have contracts with their vendors and the payments they will need to make when purchasing any kind of infrastructure. This gives them a clear view of numbers for resource budgeting and planning. Can she get the same kind of clarity on Google Cloud?

- **A. Yes, the Pricing Calculator can be used to estimate the cost of resources.**
- B. Yes. Do a trial run of typical workloads. See the billing amount and that becomes the base reference.
- C. Yes, Google provides a typical cost of application workloads by region and industry. Use that as a reference.
- D. Yes, the Cloud Native Computing Foundation publishes yearly numbers on the cost of running the cloud. Use that as a reference.

**Answer: A**

Explanation:

The pricing calculator can be used to give clear estimates of resource usage.

-> Running test loads is as closely indicative as using the pricing calculator.

-> There are no cloud cost references published, either by Google or CNCF. Even if some companies have published such info. It might not apply to you.
