About the dynamic change of our 220-1102 study guide, they will send the updates to your mailbox according to the trend of the exam.

CompTIA A+ certification is a globally recognized certification that is highly valued by employers. It is the industry standard for entry-level IT professionals and is an excellent foundation for a career in IT. CompTIA A+ Certification Exam: Core 2 certification demonstrates a candidate's competence and expertise in IT support, and passing the CompTIA A+ Certification Exam: Core 2 (220-1102) is a significant achievement that can open up many doors in the IT industry.

## CompTIA A+ Certification Exam: Core 2 Sample Questions (Q602-Q607):

### NEW QUESTION # 602

Enabling firewall ACLs may not resolve the issue if the firewall rules do not block the malicious or unwanted websites. Verifying the routing tables may not resolve the issue if the routing configuration is correct and does not affect the web traffic. Updating the antivirus definitions may help prevent future infections but may not remove the existing malware or changes to the localhost file. References: CompTIA A+ Core 2 (220-1002) Certification Exam Objectives Version 4.0, Domain 1. question 218a A network technician installed a SOHO router for a home office user. The user has read reports about home routers being targeted by malicious actors and then used in DDoS attacks. Which of the following can the technician MOST likely do to defend against this threat?

- A. Change the default credentials.
- B. Configure port forwarding.
- C. Add network content filtering.
- D. Disable the SSID broadcast.

**Answer: A**

Explanation:

One of the most effective ways to defend against malicious actors targeting home routers for DDoS attacks is to change the default credentials of the router. The default credentials are often well-known or easily guessed by attackers, who can then access and compromise the router settings and firmware. By changing the default credentials to strong and unique ones, a technician can prevent unauthorized access and configuration changes to the router. Adding network content filtering may help block some malicious or unwanted websites but may not prevent attackers from exploiting router vulnerabilities or backdoors. Disabling the SSID broadcast may help reduce the visibility of the wireless network but may not prevent attackers from scanning or detecting it. Configuring port forwarding may help direct incoming traffic to specific devices or services but may not prevent attackers from sending malicious packets or requests to the router. References: CompTIA A+ Core 2 (220-1002) Certification Exam Objectives Version 4.0, Domain 3.3

### NEW QUESTION # 603

A department has the following technical requirements for a new application:

The company plans to upgrade from a 32-bit Windows OS to a 64-bit OS. Which of the following will the company be able to fully take advantage of after the upgrade?

- A. Hard drive
- B. CPU
- C. RAM
- D. Touch screen

**Answer: C**

Explanation:

<https://www.makeuseof.com/tag/difference-32-bit-64-bit-windows/>

After upgrading from a 32-bit Windows OS to a 64-bit OS, the company will be able to fully take advantage of the RAM of the computer. This is because a 64-bit operating system is able to use larger amounts of RAM compared to a 32-bit operating system, which may benefit the system's overall performance if it has more than 4GB of RAM installed.

### NEW QUESTION # 604

Which of the following filesystems is most likely to be used for the boot volume on a Linux desktop?

- A. NTFS
- **B. ext4**
- C. APFS
- D. HFS

**Answer: B**

### NEW QUESTION # 605

A user calls the help desk to report that none of the files on a PC will open. The user also indicates a program on the desktop is requesting payment in exchange for file access. A technician verifies the user's PC is infected with ransomware. Which of the following should the technician do FIRST?

- A. Scan and remove the malware
- B. Schedule automated malware scans
- C. Disable System Restore
- **D. Quarantine the system**

**Answer: D**

Explanation:

Explanation

The technician should quarantine the system first1

### NEW QUESTION # 606

A company-owned mobile device is displaying a high number of ads, receiving data-usage limit notifications, and experiencing slow response. After checking the device, a technician notices the device has been jailbroken. Which of the following should the technician do next?

- A. Undo the jailbreak and enable an antivirus.
- B. Back up the files and do a system restore.
- **C. Restore the defaults and reimage the corporate OS.**
- D. Run an antivirus and enable encryption.

**Answer: C**

Explanation:

Jailbreaking a device exposes it to various security risks, such as malware, data theft, network attacks, and service disruption1234. Running an antivirus and enabling encryption may not be enough to remove the threats and restore the device's functionality. Undoing the jailbreak may not be possible or effective, depending on the method used. Backing up the files and doing a system restore may preserve the jailbreak and the associated problems. The best option is to erase the device and reinstall the original operating system that is compatible with the corporate policies and standards. This will ensure that the device is clean, secure, and compliant25.
