New Salesforce-Data-Cloud Study Notes, Pdf Salesforce-Data-Cloud Dumps

According to the years of the test data analysis, we are very confident that almost all customers using our products passed the exam, and in o the Salesforce-Data-Cloud question guide, with the help of their extremely easily passed the exam and obtained qualification certificate. We firmly believe that you can do it! Therefore, the choice of the Salesforce-Data-Cloud real study dumps are to choose a guarantee, which can give you the opportunity to get a promotion and a raise in the future, even create conditions for your future life. And, more importantly, when you can show your talent in these areas, naturally, your social circle is constantly expanding, you will be more and more with your same interests and can impact your career development of outstanding people. Since there is such a high rate of return, why hesitate to buy the Salesforce-Data-Cloud Exam Questions?

Salesforce Data Cloud Accredited Professional Exam Sample Questions (Q32-Q37):

NEW QUESTION # 32

How many calculated insights can be created per tenant?

- A. 5B.
- **B. 50D.**
- C. 10C.
- D. 0

Answer: B

Explanation:

The maximum number of calculated insights that can be created per tenant is 50. A calculated insight is a metric that defines and calculates a multidimensional measure on your data. You can use calculated insights to create segments and analyze your data in Data Cloud. You can also use calculated insights to create dashboards and reports in Tableau CRM. References: Calculated Insights

NEW QUESTION # 33

A user is not seeing suggested values from newly-modeled data when building a segment. What is causing this issue?

- A. Value suggestion will only return result for the first 50 values of a specific attribute.
- B. Value suggestion requires Data Aware Specialist permissions at a minimum.
- C. Value suggestion can only work on direct attributes and not related attributes.
- **D. Value suggestion is still processing and to be available.**

Answer: D

Explanation:

Value suggestion is a feature that allows users to see suggested values for data model object (DMO) fields when creating segment filters. However, this feature can take up to 24 hours to process and display the values for newly-modeled data. Therefore, if a user is not seeing suggested values from newly-modeled data, it is likely that the value suggestion is still processing and will be available soon. The other options are incorrect because value suggestion does not require any specific permissions, can work on both direct and related attributes, and can return more than 50 values for a specific attribute, depending on the data type and frequency of the values. NEW QUESTION # 34

What should an organization use to stream inventory levels from an inventory management system into Data Cloud in a fast and scalable, near-real-time way?

- A. Commerce Cloud Connector
- **B. Ingestion API**
- C. Marketing Cloud Personalization Connector
- D. Cloud Storage Connector

Answer: B

Explanation:

The Ingestion API is a RESTful API that allows you to stream data from any source into Data Cloud in a fast and scalable way. You can use the Ingestion API to send data from your inventory management system into Data Cloud as JSON objects, and then use Data Cloud to create data models, segments, and insights based on your inventory data. The Ingestion API supports both batch and streaming modes, and can handle up to 100,000 records per second. The Ingestion API also provides features such as data validation, encryption, compression, and retry mechanisms to ensure data quality and security. NEW QUESTION # 35

What is the first thing a business stakeholder should focus on when considering a Data Cloud implementation?

- A. Identify data sources
- B. Review consent and privacy management policies
- **C. Obtain cross-organizational buy-in**
- D. Identify activation targets

Answer: C

Explanation:

This is the first thing a business stakeholder should focus on when considering a Data Cloud implementation. Obtaining cross-organizational buy-in involves aligning the goals and expectations of different teams and stakeholders who will use or contribute to Data Cloud. NEW QUESTION # 36

Cumulus Financial offers both business and personal loans. Records in the Contact DLO can be useful for both groups since individual customers may have both business and personal loans. However, for legal reasons, the two groups must be kept separate. How should Cumulus Financial solve this business requirement?

- A. Use two data spaces.
- B. Create two identity resolution rules in the same data space.
- C. Duplicate the Individual DM0.
- D. Duplicate the Contact DLO.

Answer: A

Explanation:

To address the business requirement where Cumulus Financial needs to keep business and personal loan records separate for legal reasons while still leveraging the same Contact DLO, the best solution is to use two data spaces . Here's why and how this works: Understanding Data Spaces in Salesforce Data Cloud :Data spaces are logical containers within Salesforce Data Cloud that allow organizations to segment their data based on specific business needs, compliance requirements, or privacy regulations. They enable isolation of data processing and identity resolution rules while still allowing access to shared data objects like the Contact DLO.

Why Two Data Spaces?

By creating two data spaces (e.g., one for business loans and another for personal loans), Cumulus Financial can maintain separation between the two groups for legal compliance.

Both data spaces can reference the same Contact DLO, ensuring that individual customer data is not duplicated but is accessible in both contexts.

Identity resolution rules can be configured independently within each data space to ensure that the segmentation aligns with the legal requirements.

Steps to Implement This Solution :

Step 1: Navigate to the Data Spaces section in Salesforce Data Cloud.

Step 2: Create two new data spaces: one for "Business Loans" and another for "Personal Loans." Step 3: Configure the identity resolution rules separately for each data space to ensure proper segmentation.

Step 4: Link the existing Contact DLO to both data spaces. This ensures that the same contact data is available in both contexts without duplication.

Step 5: Set up activation rules and permissions to ensure that data from one data space cannot inadvertently mix with the other.

Why Not Other Options?

A). Duplicate the Individual DMO: This would lead to unnecessary duplication of data and increase storage costs. It also introduces complexity in maintaining consistency across duplicated records.

B). Duplicate the Contact DLO: Similar to duplicating the DMO, this approach increases storage and maintenance overhead without solving the core issue of legal separation.

C). Create two identity resolution rules in the same data space: While this might seem like a viable option, it does not provide the required legal separation since both groups would still exist within the same data space.

By using two data spaces, Cumulus Financial achieves the necessary legal separation while maintaining efficiency and avoiding data redundancy.

NEW QUESTION # 37

.....

Our Salesforce-Data-Cloud study tool prepared by our company has now been selected as the secret weapons of customers who wish to pass the exam and obtain relevant certification. If you are agonizing about how to pass the exam and to get the Salesforce certificate, now you can try our learning materials. Our reputation is earned by high-quality of our learning materials. Once you choose our training materials, you chose hope. Our learning materials are based on the customer's point of view and fully consider the needs of our customers. If you follow the steps of our Salesforce-Data-Cloud Exam Questions, you can easily and happily learn and ultimately succeed in the ocean of learning Next, I will detail the relevant information of our learning materials so that you can have a better understanding of our Salesforce-Data-Cloud guide training.
