

Pass Guaranteed Trustable SAP - Reliable C_S4TM_2601 Exam Preparation

“Quality First, Credibility First, and Service First” is our company’s purpose, we deeply hope our C_S4TM_2601 Study Materials can bring benefits and profits for our customers. So we have been persisting in updating in order to help customers, who are willing to buy our test torrent, make good use of time and accumulate the knowledge. We will guarantee that you will have the opportunity to use the updating system for free.

SAP C_S4TM_2601 Exam Syllabus Topics:

Section	Objectives
Topic 1: System Configuration and Monitoring	- Reporting and analytics tools - SAP TM configuration basics - SAP Fiori applications for TM
Topic 2: Charge Management and Settlement	- Charge management and pricing conditions - Freight cost calculation - Settlement and invoicing processes
Topic 3: Master Data Configuration	- Business partners and carrier setup - Resources and capacity management - Transportation network design (locations, lanes, zones)

Topic 4: Transportation Planning and Execution	- Freight order management - Optimization and planning strategies - Freight unit building and planning
Topic 5: SAP Transportation Management Overview	- SAP TM architecture and deployment options - Integration within SAP S/4HANA landscape - Key transportation business processes
Topic 6: Integration and End-to-End Processes	- Tracking and event management - Integration with SAP S/4HANA logistics modules - Order-to-cash and procure-to-pay flows

Exam C_S4TM_2601 Dumps, C_S4TM_2601 Valid Exam Voucher

If you fail in the exam, we will refund you in full immediately at one time. After you buy our SAP Certified - SAP S/4HANA Cloud Private Edition, Transportation Management (C_S4TM_2601) exam torrent you have little possibility to fail in exam because our passing rate is very high. You only need 20-30 hours to learn SAP Certified - SAP S/4HANA Cloud Private Edition, Transportation Management (C_S4TM_2601) exam torrent and prepare the exam. Many people, especially the in-service staff, are busy in their jobs, learning, family lives and other important things and have little time and energy to learn and prepare the exam. But if you buy our C_S4TM_2601 Test Torrent, you can invest your main energy on your most important thing and spare 1-2 hours each day to learn and prepare the exam.

SAP Certified - SAP S/4HANA Cloud Private Edition, Transportation Management (C_S4TM_2601) Sample Questions (Q40-Q45):

NEW QUESTION # 40

A regional specialty paper distributor is validating strategic freight procurement in SAP S/4HANA Transportation Management for time-definite delivery lanes. Procurement selects a carrier agreement that includes base freight and a time-definite service premium. Freight orders execute correctly, and base freight appears in settlement simulation, but the premium is not distributed to the originating delivery items used for customer profitability review.

Finance requires accurate delivery-level allocation before postings are released for time-definite lanes. Procurement wants standard agreement testing to continue because those lanes already calculate and distribute charges correctly. The constraint is to validate the selected time-definite agreement without stopping unaffected procurement and settlement testing.

Which action best supports the target process?

Response:

- A. Stop all carrier agreement testing until time-definite and standard conditions are validated together.
- B. Replace the time-definite agreement with a standard agreement so settlement uses a simpler charge structure.
- C. Release time-definite settlement postings because the selected carrier agreement already calculates base freight correctly.
- **D. Validate the agreement-based charge calculation and cost distribution setup for the service premium before releasing affected postings.**

Answer: D

Explanation:

Feedback:

This addresses the dependency between selected agreement terms, charge calculation, and delivery-level cost distribution. It prevents incorrect postings for time-definite lanes while allowing validated standard agreement testing to continue.

NEW QUESTION # 41

A regional industrial cleaning supplier is blueprinting SAP S/4HANA Transportation Management for consolidated depot replenishment and customer-managed pickup orders. The target process must support freight order planning, execution visibility, and later freight settlement for replenishment movements. Customer-managed pickups still depend on branch-level approval and have not been validated for packaging responsibility, carrier notification, or cost ownership.

The sales operations lead wants pickups included in the first release to improve customer service reporting. The transportation consultant notes that including the flow early would create unclear ownership for transportation planning and settlement. The constraint is to deliver a stable first release while keeping customer-managed pickups available for a later controlled transition.

Which blueprinting decision best supports the rollout constraint?

Response:

- A. Delay all depot replenishment planning until customer-managed pickups have the same process ownership and settlement design.
- B. Include customer-managed pickups immediately so reporting covers every customer-facing transportation request from the first release.
- **C. Activate depot replenishment first and document customer-managed pickups as a later-wave scope after ownership and process validation.**
- D. Configure freight settlement for customer-managed pickups first so cost ownership can be decided after postings are tested.

Answer: C

Explanation:

Feedback:

This keeps the first release focused on a stable replenishment process while preserving a defined transition path for customer-managed pickups. It supports execution visibility and later settlement without forcing an unvalidated ownership model into production scope.

NEW QUESTION # 42

A regional audio equipment wholesaler is testing SAP S/4HANA Transportation Management for shipments that include standard boxed items and oversized display units. Freight units are generated from outbound requirements, and the carrier lane is valid. During validation, freight orders combine display units and standard boxes into a load sequence that exceeds the dock's agreed handling process.

The warehouse team confirms that display-unit handling indicators are present in the source requirement, but the freight order result does not reflect the special handling distinction. The constraint is to preserve the validated route and carrier assignment while preventing freight orders that violate dock loading rules.

What is the most appropriate corrective action?

Response:

- A. Ask planners to split display-unit freight orders manually before each carrier pickup.
- B. Create a dedicated route for display units so route determination separates them from standard boxed items.
- **C. Correct freight unit and packaging control so display-unit handling characteristics influence freight order formation.**
- D. Increase carrier capacity assumptions so the combined freight order can remain executable during dispatch.

Answer: C

Explanation:

Feedback:

This addresses the configuration and data layer where special handling characteristics must influence freight unit and freight order behavior. It preserves the validated route and carrier assignment while preventing load sequences that violate dock rules.

NEW QUESTION # 43

CHALLENGE 3 - Carrier Output Timing for Loading Cutoff Readiness

Carrier output is sent quickly after a manual freight order change, but the communication does not reflect the final bonded warehouse pickup window. Warehouse teams have already prepared the loading area based on the earlier dispatch expectation.

What should the consultant recommend?

Response:

- **A. Validate that carrier output is issued from execution-ready freight orders that reflect final pickup timing before loading preparation.**
- B. Require finance to approve warehouse surcharges before carrier output is sent.
- C. Remove pickup-window details from carrier communication so the warehouse can manage timing independently.
- D. Continue sending early output because carrier confirmation speed is the main first-close success factor.

Answer: A

Explanation:

Feedback:

The execution dependency is between stable freight order data, carrier output, and loading cutoff readiness. Carrier communication should reflect final pickup timing before warehouse teams prepare the loading area.

NEW QUESTION # 44

A specialty chemicals company is preparing freight settlement in SAP S/4HANA Transportation Management for lanes served by contracted carriers. Freight orders are executable, and carrier charges are calculated. During finance testing, accessorial charges for hazardous handling appear at freight order level, but they are not reflected in the expected delivery-level cost allocation used for margin review.

Finance wants accurate delivery-level reporting before settlement postings are released for the affected lane. Logistics wants to continue testing unaffected lanes because carrier invoice deadlines are approaching. The constraint is to protect reporting accuracy without blocking settlement validation where allocation already works.

Which decision best supports the constraint?

Response:

- A. Block all carrier settlement validation until every accessorial charge type has been tested across all operating units.
- **B. Validate and correct the cost distribution setup for the hazardous handling charge before releasing settlement postings for the affected lane.**
- C. Release settlement for the affected lane because freight order-level charge calculation already includes the hazardous handling amount.
- D. Remove the hazardous handling charge from calculation and add it later during finance reconciliation for affected deliveries.

Answer: B

Explanation:

Feedback:

This acts at the allocation layer where the calculated accessorial charge must flow into delivery-level cost visibility. It prevents incorrect postings for the affected lane while allowing validated settlement flows to continue.

NEW QUESTION # 45

.....

Our C_S4TM_2601 study materials are compiled and verified by the first-rate experts in the industry domestically and they are linked closely with the real exam. Our products' contents cover the entire syllabus of the exam and refer to the past years' exam papers. Our test bank provides all the questions which may appear in the real exam and all the important information about the exam. You can use the practice test software to test whether you have mastered the C_S4TM_2601 Study Materials and the function of stimulating the exam to be familiar with the real exam's pace, atmosphere and environment. So our C_S4TM_2601 study materials are real-exam-based and convenient for the clients to prepare for the exam.
