GH-100 exam questions answers is useful for candidates who are eager to go through the examination. There are thousands of companies recognized and valued the certification in the world. GH-100 Exam Questions Answers will make you pass exam easily.

Microsoft GH-100 Exam Syllabus Topics:

Topic	Details
Topic 1	• Describe how GitHub is deployed, distributed, and licensed: This section of the exam measures skills of GitHub Enterprise Administrators and highlights the deployment models of GitHub Enterprise Server, Enterprise Cloud, and GitHub AE. It covers licensing structures, billing for seat licenses and metered services, support options, and monitoring license usage across users and machine accounts.

Topic 2	• Manage GitHub Packages:This section of the exam measures skills of GitHub Enterprise Administrators and focuses on managing GitHub Packages, their use in workflows, and how they differ from releases. It involves accessing, writing, and sharing packages across teams while ensuring integration into CI • CD pipelines.
Topic 3	• Manage GitHub Actions: This section of the exam measures skills of DevOps Engineers and emphasizes managing workflows, reusable actions, and distribution strategies within the enterprise. It explains configuring organization-level policies, managing self-hosted and GitHub-hosted runners, controlling access through IP allow lists, handling encrypted secrets, and integrating third-party vaults for workflow security.

Microsoft GitHub Administration Sample Questions (Q42-Q47):

NEW QUESTION # 42
How is CodeQL different from other static analysis tools?

- A. It only works for open-source projects.
- B. It allows querying of code semantics using a database-like language.
- C. It runs analysis only after a security breach.
- D. It removes insecure code automatically

Answer: B

Explanation:
CodeQL differs from traditional static analysis tools by ingesting your code into a queryable database and letting you write QL queries - its own database-style language - to express semantic checks and find patterns across the codebase.

NEW QUESTION # 43
What needs to be done to ensure that only specific repositories can access the runners in an organization runner group?

- A. Configure the Actions Policies to "Only selected repositories".
- B. Configure repository access in the runner group settings.
- C. Add a label to the runner group.
- D. Use GitHub's meta API to configure access.

Answer: B

Explanation:
In the organization's runner group settings, switch the access from "All repositories" to "Selected repositories" and then explicitly choose which repos may use those runners.

NEW QUESTION # 44
When a token is used to perform actions across different GitHub resources, how is this reflected in audit logs?

- A. Each API action made with the token generates a separate audit log entry
- B. Only the first repository accessed is recorded
- C. GitHub creates a ZIP archive of all token activity
- D. The audit log stores only the token name and not its actions

Answer: A

Explanation:
Each API call authenticated with a token generates its own audit-log event, so you'll see a distinct entry for every action performed across different resources, each annotated with the token's hashed ID, actor, and source IP.

NEW QUESTION # 45

Our organization is updating its enterprise policies. Which of the following steps should you take to ensure alignment with security requirements?

- A. Maintain clear documentation of existing policies and policy changes.
- B. Implement the new enterprise policies across the organization first and then consult with the security team to identify- any necessary adjustments or retrofits
- C. Regularly assess and adjust policies based on evolving risks.
- D. Implement changes without consulting stakeholders.

Answer: A,B

NEW QUESTION # 46
Which THREE of the following accurately describe how the SCIM protocol enhances user management in GitHub Enterprise Cloud? (Choose three.)

- A. SCIM generates authentication tokens for accessing GitHub's REST API.
- B. SCIM synchronizes changes to user attributes from the identity provider to GitHub.
- C. SCIM automatically deletes organization repositories when administrators are removed.
- D. SCIM configures repository permissions based on user roles within the organization.
- E. SCIM deactivates GitHub accounts when users are deleted from the identity provider.
- F. SCIM automates user provisioning when new users are added to the identity provider.

Answer: B,E

Explanation:
SCIM automatically updates a user's account on GitHub whenever their profile attributes change in the identity provider.
When a user is removed or deactivated in the IdP, SCIM deactivates (soft-deprovisions) their GitHub account and disables access.
SCIM provisions new GitHub Enterprise Cloud accounts automatically when users are added in the identity provider.

NEW QUESTION # 47
......

The data that come up with our customers who have bought our GH-100 actual exam and provided their scores show that our high pass rate is 98% to 100%. This is hard to find and compare with in the market. And numerous enthusiastic feedbacks from our worthy clients give high praises not only on our GH-100 study torrent, but also on our sincere and helpful 24 hours customer services on GH-100 exam questions online. All of these prove that we are the first-class vendor in this career and have authority to ensure your success in your first try on GH-100 exam.
