(10 महत्वपूर्ण खबरें एवं उन पर आधारित 10 प्रश्न)

14 मार्च
2024

1. जापान का पहला निजी क्षेत्र का रॉकेट 'कैरोस' प्रक्षेपण के दौरान हुआ नष्ट

स्पेस वन के कैरोस रॉकेट को 13 मार्च, 2024 को पश्चिमी जापान के वाकायामा प्रान्त के कुशिमोटो में एक लॉन्च पैड से लॉन्च किया गया था उड़ान भरने के बाद विस्फोट उसमें विस्फोट होने से वह नष्ट हो गया। यह निजी क्षेत्र का जापान का पहला रॉकेट था।

काइरोस ठोस-ईंधन इंजन के तीन चरणों और एक तरल-ईंधन पोस्ट-बुस्ट चरण इंजन से बना है, जो 250 किलोग्राम तक के पेलोड को कम-पृथ्वी की कक्षा में ले जाने का प्रयास करता है।

- कैरोस नामक कुछ ही सेकंड में हवा में ही विस्फोट हो जाता है। इलाके में धुएं का भारी गुबार छा गया और कुछ जगहों पर आग की लपटें उठने लगीं।
- जापानी मीडिया रिपोर्टों के अनुसार, प्रक्षेपण में पहले ही कई बार देरी हो चुकी है, यदि यह सफल होता, तो स्पेस वन कक्षा में रॉकेट भेजने वाली पहली निजी कंपनी होती। केनन इलेक्ट्रॉनिक्स, आईएचआई, शिमिजु और प्रमुख बैंकों सहित प्रमुख जापानी कंपनियों के निवेश के साथ, टोक्यो स्थित स्पेस वन की स्थापना 2018 में की गई थी।
- जापान के मुख्य अंतरिक्ष अन्वेषण प्रयास का नेतृत्व सरकार के NASDA ने किया है, जो जापान की राष्ट्रीय अंतरिक्ष विकास एजेंसी के लिए है, यह देश अमेरिका के NASA के समकक्ष है। एजेंसी को अब JAXA, या जापान एयरोस्पेस एक्सप्लोरेशन एजेंसी कहा जाता है।
- पिछले महीने, राज्य-वित्त पोषित जापान एयरोस्पेस एक्सप्लोरेशन एजेंसी (JAXA) ने अपने नए लागत-कुशल फ्लैगशिप रॉकेट, H3 को सफलतापूर्वक लॉन्च किया। JAXA ने इस वर्ष एक ऐतिहासिक "मिनर्वाइंट" चंद्रमा लैंडिंग पूरी की, और H3 2030 तक लगभग 20 उपग्रहों और जांचों को अंतरिक्ष में ले जाने वाला है।

Our JN0-224 learning questions have its own advantage. In order to make sure you have answered all questions, we have answer list to help you check. Then you can choose the end button to finish your exercises of the JN0-224 study guide. The calculation system of our JN0-224 Real Exam will start to work and finish grading your practices. Quickly, the scores will display on the screen. The results are accurate. You need to concentrate on memorizing the wrong questions.

Juniper JN0-224 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Rest API: This domain covers Junos REST API implementation, REST API Explorer tool, and cURL usage for HTTP-based device management and configuration.
Topic 2	<ul style="list-style-type: none"> Junos Automation Stack and DevOps Concepts: This domain covers fundamental automation tools, frameworks, APIs, and DevOps culture applicable to Junos platform operations and network management.

Topic 3	<ul style="list-style-type: none"> • Python • PyEZ: This domain examines Python programming with PyEZ library for Junos automation, including JSNAPy, Jinja2 templates, RPC calls, exception handling, and device configuration management.
Topic 4	<ul style="list-style-type: none"> • Data Serialization: This domain addresses YAML and JSON formats used for structured data representation and exchange in network automation workflows.
Topic 5	<ul style="list-style-type: none"> • NETCONF • XML API: This domain focuses on XML syntax, XPath expressions, NETCONF protocol, and XML API functionality for programmatic device configuration and communication.

Valid Juniper JN0-224 Exam Papers & JN0-224 Training Pdf

Market is a dynamic place because a number of variables keep changing, so is the practice materials field of the JN0-224 practice exam. Our JN0-224 exam dumps are indispensable tool to pass it with high quality and low price. By focusing on how to help you effectively, we encourage exam candidates to buy our JN0-224 practice test with high passing rate up to 98 to 100 percent all these years. Our Juniper exam dumps almost cover everything you need to know about the exam. As long as you practice our JN0-224 Test Question, you can pass exam quickly and successfully. By using them, you can not only save your time and money, but also pass JN0-224 practice exam without any stress.

Juniper Automation and DevOps, Associate (JNCIA-DevOps) Sample Questions (Q55-Q60):

NEW QUESTION # 55

Which Python operator is used to test if two variables are equal?

- A. ==
- B. =
- C. %
- D. !=

Answer: A

Explanation:

In Python, the == operator is used to test whether two variables are equal. It returns True if the variables are equal and False if they are not.

Option B (=) is correct because it is the equality operator in Python.

Option A (!=) is used for inequality, Option C (%) is the modulus operator, and Option D (=) is used for assignment, not for testing equality.

Supporting Reference:

Python Documentation on Operators: The official Python documentation covers the use of == for equality checks.

NEW QUESTION # 56

Junos PyEZ tables are formatted using which file type?

- A. txt
- B. YAML
- C. IXML
- D. SON

Answer: B

Explanation:

Junos PyEZ uses YAML (YAML Ain't Markup Language) files to define the format for tables and views when working with operational and configuration data. YAML is a human-readable data format that is commonly used for configuration files, making it suitable for defining data structures in PyEZ.

Option B (YAML) is correct because PyEZ tables are defined using YAML files.

Options A (JSON), C (txt), and D (IXML) are incorrect in this context, as YAML is the standard format used.

Supporting Reference:

Junos PyEZ Tables Documentation: Explains the use of YAML files for formatting tables and views in Junos PyEZ.

NEW QUESTION # 57

Which two PyEZ object methods are included by default when using a Python context manager? (Choose two.)

- A. lock () and unlock (>
- B. open() and close()
- C. |load() and commit ()
- D. pdiff() and diff()

Answer: A,B

Explanation:

When using a Python context manager with Junos PyEZ, two key methods are automatically included:

open() and close(): These methods are used to establish and terminate a connection to a Junos device. When you use a context manager (the with statement), open() is called when entering the block, and close() is called when exiting, ensuring the connection is properly managed.

lock() and unlock(): These methods are used to lock the configuration database to prevent other users from making changes while you are working on it. When using a context manager, lock() is called at the start of the block, and unlock() is called at the end, ensuring safe configuration changes.

Supporting Reference:

Junos PyEZ Documentation: The documentation explains how context managers work in PyEZ, including the automatic invocation of open(), close(), lock(), and unlock() methods.

NEW QUESTION # 58

You want to make a list in Python to store data.

Which statement is the correct way to accomplish this task?

- A. L = {0, 1, 2, 3, 4, 5}
- B. L = [0, 1, 2, 3, 4, 5]
- C. L = (0, 1, 2, 3, 4, 5)
- D. L = "0, 1, 2, 3, 4, 5"

Answer: B

Explanation:

In Python, to create a list, you use square brackets []. The correct syntax to create a list containing the numbers 0 through 5 is:

```
L = [0, 1, 2, 3, 4, 5]
```

This statement creates a list object that stores the specified integers.

Other options are incorrect:

A defines a string, not a list.

B defines a set, which is an unordered collection with no duplicate elements.

D defines a tuple, which is an immutable sequence, not a list.

Reference:

Python Official Documentation: Discusses lists, sets, tuples, and their syntaxes.

Python Data Structures Guide: Provides examples of creating and manipulating lists.

NEW QUESTION # 59

Which two statements are true about an XML schema document? (Choose two.)

- A. It is formatted as an XSD file.

- B. It is an authoritative source for operational and configuration XML.
- C. It is formatted as an XLT file.
- D. It cannot be examined in the Junos CLI.

Answer: A,B

Explanation:

An XML schema document (XSD) is a key component in defining the structure and constraints of XML data used in various applications, including Junos:

Authoritative Source (C): An XML schema document serves as the authoritative definition of the structure, content, and semantics of XML documents. It ensures that the XML data adheres to specific rules and formats, which is essential for both operational and configuration XML.

XSD Format (D): XML schema documents are typically written in the XSD (XML Schema Definition) format, which provides a formal description of the XML document's structure.

Option A is incorrect because XML schemas are not formatted as XLT files (which are related to XSLT transformations), and Option B is incorrect because XML schemas can indeed be examined in the Junos CLI using appropriate commands.

Reference:

W3C XML Schema Definition Language (XSD) Documentation: Provides comprehensive information on the XSD format.

Juniper Networks Documentation: Discusses the role of XML schemas in managing Junos configurations.

NEW QUESTION # 60

.....

Once you have practiced on our Automation and DevOps, Associate (JNCIA-DevOps) test questions, the system will automatically memorize and analyze all your practice. You must finish the model test in limited time. There have a timer on the right of the interface. Once you begin to do the exercises of the JN0-224 test guide, the timer will start to work and count down. If you don't finish doing the exercises, all your exercises of the JN0-224 Exam Questions will be delivered automatically. Then the system will generate a report according to your performance. You will clearly know where you are good at or not. Then you can make your own learning plans based on the report of the JN0-224 test guide. Also, you will do more practices that you are not good at until you completely have no problem.
