It is a complex platform that requires skilled professionals to manage and maintain.

Trend Micro Certified Professional for Deep Security Sample Questions (Q47-Q52):

NEW QUESTION # 47

Your organization would like to implement a mechanism to alert administrators when files on a protected servers are modified or tampered with. Which Deep Security Protection Module should you enable to provide this functionality?

- A. The Integrity Monitoring Protection Module
- B. The Intrusion Prevention Protection Module
- C. Deep Security can not provide this type of functionality
- D. The File Inspection Protection Module

Answer: A

NEW QUESTION # 48

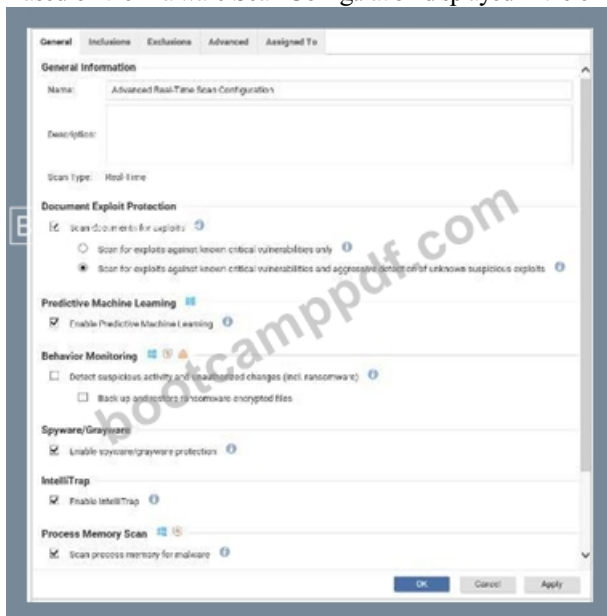

The Intrusion Prevention Protection Module is enabled, its Behavior is set to Prevent and rules are assigned. When viewing the events, you notice that one of Intrusion Prevention rules is being triggered and an event is being logged but the traffic is not being blocked. What is a possible reason for this?

- A. The default Prevention Behavior in this particular rule may be set to Detect. This logs the triggering of the rule, but does not actually enforce the block.
- B. The Intrusion Prevention rule is being triggered as a result of the packet sanity check failing and the packet is being allowed to pass.
- C. The network engine is running in Inline mode. In Inline mode, Deep Security provides no protection beyond a record of events.
- D. The Deep Security Agent is experiencing a system problem and is not processing packets since the "Network Engine System Failure" mode is set to "Fail Open".

Answer: A

NEW QUESTION # 49

Based on the Malware Scan Configuration displayed in the exhibit, which of the following statements is false.

- A. Any document files that display suspicious behavior will be submitted and executed in a sandbox environment on a Deep Discover Analyzer device.

- B. Internet access is required to properly enable the features identified in this configuration.
- C. Deep Security Agents using this Malware Scan Configuration will not monitor for compromised Windows processes.
- **D. Deep Security Agents will only be able to identify malware in files by using patterns downloaded from the Smart Protection Network.**

Answer: D

Explanation:

The configuration shown enables Predictive Machine Learning, Process Memory Scan, Document Exploit Protection, and other advanced technologies beyond just pattern-based detection. This means Deep Security Agents will use more than just patterns downloaded from the Smart Protection Network to detect malware.

NEW QUESTION # 50

Which of the following statements is true regarding Intrusion Prevention protection?

- A. Intrusion Prevention protection can only work on computers where a Deep Security Agent is installed; agentless protection is not supported.
- B. Intrusion Prevention protection only works in conjunction with the Anti-Malware Protection Module.
- **C. Intrusion Prevention protection can drop or reset a connection.**
- D. Intrusion Prevention protection can drop malicious packets but cannot reset the connection.

Answer: C

NEW QUESTION # 51

An administrator enables Multi-Tenancy in Deep Security and creates multiple tenants. After a period of time, the administrator would like to review the usage and resource consumption by a specific tenant. How can the administrator retrieve this information?

- A. The administrator will not be able to retrieve this information without licensing and enabling the Multi-Tenancy Chargeback module in the Deep Security Manager Web console.
- B. The administrator could check the Multi-Tenancy log file for resource consumption details.
- C. The administrator downloads the Tenant usage details from the Deep Security Agent on the Tenant computer.
- **D. The administrator could generate a Tenant report from within the Deep Security Manager Web console.**

Answer: D

Explanation:

multi-tenancy
