The next step to do is to take Trend Deep-Security-Professional. These Deep-Security-Professional practice questions can help you measure your skill to see if it has already met the standard set by Trend Deep-Security-Professional. To optimize the effectiveness, We have made the Deep-Security-Professional Practice Test using the same format as the Trend Micro Certified Professional for Deep Security exam. All Trend Exam Dumps questions appearing on the mock test are the ones we carefully predicted to appear on your upcoming exam.

There are a lot of experts and professors in our company. All Deep-Security-Professional study torrent of our company are designed by these excellent experts and professors in different area. We can make sure that our Deep-Security-Professional test torrent has a higher quality than other study materials. The aim of our design is to improving your learning and helping you gains your certification in the shortest time. If you long to gain the certification, our Trend Micro Certified Professional for Deep Security guide torrent will be your best choice. Many experts and professors consist of our design team, you do not need to be worried about the high quality of our Deep-Security-Professional Test Torrent. If you decide to buy our study materials, you will have the opportunity to enjoy the best service.

New Trend Deep-Security-Professional Test Labs & Deep-Security-Professional Valid Exam Answers

The PassReview is one of the top-rated and trusted platforms that are committed to making the Trend Micro Certified Professional for Deep Security (Deep-Security-Professional) certification exam journey successful. To achieve this objective PassReview has hired a team of experienced and qualified Trend Deep-Security-Professional Exam trainers. They work together and put all their expertise to maintain the top standard of Deep-Security-Professional practice test all the time.

Trend Deep-Security-Professional certification exam is an essential credential for IT professionals and security analysts who work with Trend Micro's Deep Security platform. It provides a rigorous assessment of a candidate's knowledge and skills, and demonstrates their commitment to staying up-to-date with the latest security technologies and best practices.

Trend Deep-Security-Professional certification exam is a professional certification offered by Trend Micro for individuals who have expertise in the field of deep security. Trend Micro Certified Professional for Deep Security certification validates the knowledge and

skills of professionals who are responsible for managing and maintaining the Trend Micro Deep Security solution. Deep-Security-Professional Exam is designed for IT professionals who are looking to enhance their skills and knowledge in the area of deep security.

The Deep Security solution is a comprehensive security platform that provides protection for physical, virtual, and cloud environments. It offers a range of security features such as intrusion prevention, anti-malware, firewall, and log inspection. The Trend Micro Certified Professional for Deep Security exam covers all of these features and more, ensuring that candidates are well-versed in the full range of capabilities the solution has to offer.

Trend Micro Certified Professional for Deep Security Sample Questions (Q69-Q74):

NEW QUESTION # 69

The details of a policy are displayed in the exhibit. Based on these details, which of the following statements is true?

- A. Packets failing the Network Packet Sanity Check will still be allowed to pass through the network engine.
- **B. The credibility scores for visited web sites will be cached. If access to the web site is re-requested again within 30 minutes, its credibility score will be retrieved from the cache instead of the configured Smart Protection source.**
- C. Any events generated by computers within your corporate network, as defined by an IP address range, will be ignored
- D. Live packet streams coming through the network engine will be replicated and all traffic analysis will be performed on the replicated stream

Answer: B

Explanation:

In the provided policy (refer to the screenshot):

The Cache Lifetime is set to "Inherited (30 Minutes)" and the Cache Stale Time is set to "Inherited (15 Minutes)." This means credibility scores (such as from Web Reputation) are cached, and if a website is revisited within 30 minutes, its credibility score is fetched from the cache rather than querying the Smart Protection source again. This improves efficiency and reduces network requests.

From the documentation:

"Cache Lifetime: The amount of time to keep credibility scores for URLs in the cache. If the same URL is visited again within this time, the cached result is used instead of re-querying the Smart Protection source." (Source: Trend Micro Deep Security Administrator's Guide - Web Reputation section)

Options B, C, and D are incorrect based on the settings shown:

B: "Network Packet Sanity Check Failure" is set to "Fail closed," so packets will NOT be allowed if they fail this check.

C: There is no IP address filtering or event exclusion shown in the screenshot.

D: There is no mention or configuration of packet stream replication.

Trend Micro Deep Security Administrator's Guide, "Web Reputation Module"

NEW QUESTION # 70

Which of the following statements regarding the Integrity Monitoring Protection Module is true?

- A. The Integrity Monitoring rules include a property that identifies whether a change to a monitored system object was performed as part of a legitimate operation.
- B. Any changes to the system objects monitored by the Integrity Monitoring Protection Module are assumed to be legitimate, however, an administrator can revise the status of the object modification to Malicious during a review of the Integrity Monitoring Events.
- **C. The Integrity Monitoring Protection Module can detect changes to the system, but lacks the ability to distinguish between legitimate and malicious changes.**
- D. Any changes to monitored system objects that are detected after a Recommendation Scan is run on the protected computer are assumed to be malicious.

Answer: C

Explanation:

Integrity Monitoring detects and reports changes to files, registries, and system areas. It does not automatically determine whether a change is legitimate or malicious; that distinction must be made by an administrator through event review. The module's primary purpose is detection, not classification.

NEW QUESTION # 71

The Intrusion Prevention Protection Module is enabled and a Recommendation Scan is run to identify vulnerabilities on a Windows Server 2016 computer. How can you insure that the list of recommendations is always kept up to date?

- A. Enable "Ongoing Scans" to run a recommendation scan on a regular basis. This will identify new Intrusion Prevention rules to be applied.
- B. Recommendation Scans are only able to suggest Intrusion Prevention rules when the Protection Module is initially enabled.
- C. Disabling, then re-enabling the Intrusion Prevention Protection Module will trigger a new Recommendation Scan to be run. New rules will be included in the results of this new scan.
- D. New rules are configured to be automatically sent to Deep Security Agents when Recommendation Scans are run.

Answer: A

NEW QUESTION # 72

Which of the following statements correctly describes Smart Folders?

- A. Smart Folders act as a saved search of computers which is executed each time the folder is clicked to display its contents.
- B. Smart Folders are a collection of subfolders containing the policy settings that are applied to child policies or directly to Computers.
- C. Smart Folders identify the folders that will be scanned when a Real-Time, Manual or Scheduled malware scan is run.
- D. Smart Folders are the containers used to store the results of Recommendation Scans. Once a Recommendation Scan has completed, and administrator can click a Smart Folder and select which of the recommended rules to apply.

Answer: A

Explanation:

Smart Folders in Deep Security are dynamic, acting like saved searches. When clicked, they display computers matching the folder's search criteria in real time, such as OS type, module status, or alert conditions.

From the official documentation:

"Smart Folders are dynamic views in the Deep Security Manager that display a set of computers based on specific search criteria. Their contents are updated automatically each time the folder is accessed." Options A, B, D do not accurately describe Smart Folders.

Trend Micro Deep Security Help: Smart Folders

NEW QUESTION # 73

Which of the following are valid methods for forwarding Event information from Deep Security? Select all that apply.

- A. Amazon Simple Notification Service (SNS)
- B. Simple Network Management Protocol (SNMP)
- C. Security Information and Event Management (SIEM)
- D. Deep Security Application Programming Interface (API)

Answer: A,B,C

Explanation:

You can configure Deep Security Manager to instruct all managed computers to send logs to a SI-EM, Amazon Simple Notification Service or SNMP computers.

Explanation: Study Guide - page (322)

NEW QUESTION # 74

.....

It is quite convenient to study with our Deep-Security-Professional study materials. If you are used to study with paper-based materials you can choose the PDF version which is convenient for you to print. If you would like to get the mock test before the real Deep-Security-Professional exam you can choose the software version, and if you want to study in anywhere at any time then our online APP version is your best choice since you can download it in any electronic devices. And the price of our Deep-Security-Professional learning guide is favorable.
