If you really intend to pass the Deep-Security-Professional exam, our software will provide you the fast and convenient learning and you will get the best study materials and get a very good preparation for the exam. The content of the Deep-Security-Professional guide torrent is easy to be mastered and has simplified the important information. What's more, our Deep-Security-Professional prep torrent conveys more important information with less questions and answers. The learning is relaxed and highly efficiently with our Deep-Security-Professional exam questions.

For consolidation of your learning, our PDF, Software and APP online versions of the Deep-Security-Professional exam questions also provide you with different sets of practice questions and answers. Doing all these sets of the Deep-Security-Professional study materials again and again, you enrich your knowledge and maximize chances of an outstanding exam success. And the content of the three version is the same, but the displays are totally different. If you want to know them before the payment, you can free download the demos of our Deep-Security-Professional learning braindumps.

Valid Exam Deep-Security-Professional Preparation & Test Deep-Security-Professional Tutorials

Our Deep-Security-Professional desktop practice test software works after installation on Windows computers. The Trend Micro Certified Professional for Deep Security Deep-Security-Professional web-based practice exam has all the features of the desktop software, but it requires an active internet connection. If you are busy in your daily routine and cant manage a proper time to sit and prepare for the Deep-Security-Professional Certification test, our Deep-Security-Professional PDF questions file is ideal for you. You can open and use the Deep-Security-Professional Questions from any location at any time on your smartphones, tablets, and laptops. Questions in the Trend Micro Certified Professional for Deep Security Deep-Security-Professional PDF document are updated, and real.

Trend Micro Certified Professional for Deep Security Sample Questions (Q61-Q66):

NEW QUESTION # 61

Which of the following statements is correct regarding the policy settings displayed in the exhibit?

Policy: Base Policy > Windows

General Advanced Scanner **Event Forwarding**

Communication Direction
Direction of Deep Security Manager to Agent/Application communication: inherited (Did not inherit)

Heartbeat
 Heartbeat Interval (in minutes): 5 Minutes
 Number of heartbeats that can be missed before an alert is raised: 3
 Maximum change (in minutes) of the local system time on the computer between heartbeats before an alert is raised: 5 Minutes
 Hard offline errors for inactive virtual machines: inherited (No)

Send Policy Changes Immediately
Automatically send policy changes to agents: inherited (Yes)

Troubleshooting
Logging Level: inherited (Do Not Override)

Agent Self Protection
Prevent local end-users from uninstalling, stopping, or otherwise modifying the agent: Yes
 Local override requires password: inherited (No)
 Password:
 Confirm Password:

Back Save Cancel

- A. Deep Security Agents using the displayed policy will send event details to Deep Security Manager every 5 minutes.
- B. The Heartbeat interval value displayed in this policy is inherited from the parent policy
- C. Deep Security Manager will refresh the policy details on the Deep Security Agents using this policy every 5 minutes.
- D. All Deep Security Agents will send event details to Deep Security Manager every 5 minutes.

Answer: D

NEW QUESTION # 62

The details for an event are displayed in the exhibit. Based on these details, which Protection Module generated the event?

General Tags

General Information

Time: June 21, 2018 13:59:42
 Computer: workstation_jyahn
 Event Origin: Agent
 Reason: 1003802 - Directory Server - Microsoft Windows Active Directory
 Description: Active directory Success Audit event.
 Rank: 100 = Asset Value x Severity Value = 1 x 100
 Severity: Critical (13)
 Groups: client_error,invalid_request,authentication_failed
 Program Name: syslogd
 Event:
 Location:
 Source IP:
 Source Port:
 Destination IP:
 Destination Port:
 Protocol:
 Action:
 < Back Next > Close

- A. Intrusion Prevention
- B. Firewall
- C. Integrity Monitoring
- D. Log Inspection

Answer: D

Explanation:

The event details show a "Reason" referencing an Active Directory event (Success Audit), a "Description" that notes "Active

directory Success Audit event," and a "Program Name" of "syslogd." This matches the operation of the Log Inspection module, which monitors logs from operating system and application sources and reports events such as authentication failures, system errors, and audit events.

The other modules do not generate events based on log entries in this manner.

NEW QUESTION # 63

Which of the following statements is true regarding the Intrusion Prevention Protection Module?

- A. The Intrusion Prevention Protection Module can prevent applications from executing, allowing an organization to block unallowed software.
- B. The Intrusion Prevention Protection Module blocks or allows traffic based on header information within data packets.
- C. The Intrusion Prevention Protection Module can identify changes applied to protected objects, such as the Hosts file, or the Windows Registry.
- **D. The Intrusion Prevention Protection Module analyzes the payload within incoming and outgoing data packets to identify content that can signal an attack.**

Answer: D

Explanation:

The Intrusion Prevention Module (IPS) performs deep packet inspection, examining both the headers and payload of network packets to detect and block exploits, malware, and other threats. It is not limited to header analysis and is not responsible for file integrity or application control.

From the official documentation:

"The Intrusion Prevention module inspects the payload and headers of network traffic to detect and block exploits and attacks. It uses deep packet inspection techniques to identify malicious content and suspicious patterns in network data." Option B is correct. Option A is only partially true (IPS looks at more than just headers).

Option C is handled by Integrity Monitoring, not IPS.

Option D is handled by Application Control, not IPS.

NEW QUESTION # 64

An administrator enables Multi-Tenancy in Deep Security and creates multiple tenants. After a period of time, the administrator would like to review the usage and resource consumption by a specific tenant. How can the administrator retrieve this information?

- A. The administrator could check the Multi-Tenancy log file for resource consumption details.
- B. The administrator downloads the Tenant usage details from the Deep Security Agent on the Tenant computer.
- **C. The administrator could generate a Tenant report from within the Deep Security Manager Web console.**
- D. The administrator will not be able retrieve this information without licensing and enabling the Multi-Tenancy Chargeback module in the Deep Security Manager Web console.

Answer: C

Explanation:

Usage and resource consumption for a tenant can be reviewed by generating tenant usage/chargeback reports directly in the Deep Security Manager Web console.

Option A is incorrect; the log file does not contain usage stats.

Option C is incorrect; no extra licensing is required for basic reporting.

Option D is incorrect; usage reports are generated in the manager, not on the agent.

NEW QUESTION # 65

Which of the following statements regarding the Integrity Monitoring Protection Module is true?

- A. Any changes to the system objects monitored by the Integrity Monitoring Protection Module are assumed to be legitimate, however, an administrator can revise the status of the object modification to Malicious during a review of the Integrity Monitoring Events.
- B. Any changes to monitored system objects that are detected after a Recommendation Scan is run on the protected computer are assumed to be malicious.
- C. The Integrity Monitoring rules include a property that identifies whether a change to a monitored system object was performed as part of a legitimate operation.
- D. The Integrity Monitoring Protection Module can detect changes to the system, but lacks the ability to distinguish between legitimate and malicious changes.

Answer: D

Explanation:

Integrity Monitoring detects and reports changes to files, registries, and system areas. It does not automatically determine whether a change is legitimate or malicious; that distinction must be made by an administrator through event review. The module's primary purpose is detection, not classification.
