

100% Pass Quiz 2026 Confluent Fantastic CCAAK: Actual Confluent Certified Administrator for Apache Kafka Tests

What's more, part of that DumpsReview CCAAK dumps now are free: https://drive.google.com/open?id=1EgfXUcTPmT6M8i6BpPHtlmrHW_AXfXbM

Our CCAAK question torrent not only have reasonable price but also can support practice perfectly, as well as in the update to facilitate instant upgrade for the users in the first place, compared with other education platform on the market, the CCAAK Exam Question can be said to have high quality performance. We can sure that you will never regret to download and learn our study material, and you will pass the exam at your first try.

Confluent CCAAK Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Deployment Architecture: This section of the exam measures skills of a Kafka Administrator and covers different Kafka deployment topologies. It evaluates understanding of high availability, disaster recovery, multi-data center replication, and the roles of Zookeeper or KRaft in the cluster architecture.
Topic 2	<ul style="list-style-type: none">Apache Kafka® Fundamentals: This section of the exam measures skills of a Kafka Administrator and covers core concepts such as Kafka architecture, components, and data flow. It assesses the candidate's understanding of topics like topics and partitions, brokers, producers, consumers, and message retention.
Topic 3	<ul style="list-style-type: none">Kafka Connect: This section of the exam measures skills of a Site Reliability Engineer and addresses the use and management of Kafka Connect for data integration. It includes setting up connectors, managing configurations, and ensuring efficient movement of data between Kafka and external systems.
Topic 4	<ul style="list-style-type: none">Apache Kafka® Security: This section of the exam measures skills of a Site Reliability Engineer and focuses on securing Kafka environments. It includes authentication mechanisms such as TLS and SASL, authorization using ACLs, and encrypting data at rest and in transit to ensure secure communication and access control.
Topic 5	<ul style="list-style-type: none">Troubleshooting: This section of the exam measures skills of a Kafka Administrator and includes diagnosing common issues in Kafka clusters. It covers problem areas such as performance bottlenecks, message delivery failures, replication issues, and consumer lag, along with techniques to resolve them effectively.
Topic 6	<ul style="list-style-type: none">Observability: This section of the exam measures skills of a Site Reliability Engineer and focuses on monitoring Kafka clusters. It assesses knowledge of metrics, logging, and alerting tools, including how to use them to maintain cluster health and performance visibility.

Latest CCAAK Test Pdf, Real CCAAK Exam Answers

Due to lots of same products in the market, maybe you have difficulty in choosing the CCAAK guide test. We can confidently tell you that our products are excellent in all aspects. You can directly select our products. Firstly, we have free trials of the CCAAK exam study materials to help you know our products. One of the great advantages is that you will soon get a feedback after you finish the exercises. So you are able to adjust your learning plan of the CCAAK Guide test flexibly. We hope that our new design can make study more interesting and colorful. You also can send us good suggestions about developing the study material.

Confluent Certified Administrator for Apache Kafka Sample Questions (Q27-Q32):

NEW QUESTION # 27

A Kafka administrator notices that their consumers of Topic X are starting to fall behind. The administrator sees that Topic X has four partitions, and the consumer group has two consumers.

Which change can increase the performance of the Consumer Group?

- **A. Increase the number of consumers in the consumer group.**
- B. Create a new consumer group for Topic X containing two (2) consumers.
- C. Decrease the consumer acknowledgment property to increase throughput.
- D. Increase the partitions in Topic X.

Answer: A

Explanation:

With 4 partitions and only 2 consumers, some consumers are handling multiple partitions, which may cause lag if processing is slow. By increasing the number of consumers in the group (up to 4), Kafka can assign one partition per consumer, improving parallelism and throughput.

NEW QUESTION # 28

Your organization has a mission-critical Kafka cluster that must be highly available. A Disaster Recovery (DR) cluster has been set up using Replicator, and data is continuously being replicated from source cluster to the DR cluster. However, you notice that the message on offset 1002 on source cluster does not seem to match with offset 1002 on the destination DR cluster.

Which statement is correct?

- A. The DR cluster is lagging behind updates; once the DR cluster catches up, the messages will match.
- B. The message on DR cluster got over-written accidentally by another application.
- **C. The offsets for the messages on the source, destination cluster may not match.**
- D. The message was updated on source cluster, but the update did not flow into destination DR cluster and errored.

Answer: C

Explanation:

When using Confluent Replicator (or MirrorMaker), offsets are not preserved between the source and destination Kafka clusters. Messages are replicated based on content, but they are assigned new offsets in the DR (destination) cluster. Therefore, offset 1002 on the source and offset 1002 on the DR cluster likely refer to different messages, which is expected behavior.

NEW QUESTION # 29

What does Kafka replication factor provide? (Choose two.)

- **A. Durability**
- B. Performance
- **C. Availability**
- D. Security

Answer: A,C

Explanation:

Replication ensures that multiple copies of data exist across different brokers, so data is not lost if one broker fails.

With multiple replicas, Kafka can continue to serve data even if the leader or one replica fails, maintaining service availability.

NEW QUESTION # 30

Which ksqldb statement produces data that is persisted into a Kafka topic?

- A. SELECT (Push Query)
- B. SELECT (Pull Query)
- C. INSERT VALUES
- D. CREATE TABLE

Answer: C

Explanation:

INSERT VALUES is used to write data directly into a Kafka topic through a ksqldb stream or table. This data is persisted.

NEW QUESTION # 31

Your Kafka cluster has four brokers. The topic t1 on the cluster has two partitions, and it has a replication factor of three. You create a Consumer Group with four consumers, which subscribes to t1.

In the scenario above, how many Controllers are in the Kafka cluster?

- A. One
- B. two
- C. three
- D. Four

Answer: A

Explanation:

In a Kafka cluster, only one broker acts as the Controller at any given time. The Controller is responsible for managing cluster metadata, such as partition leadership and broker status. Even if the cluster has multiple brokers (in this case, four), only one is elected as the Controller, and others serve as regular brokers. If the current Controller fails, another broker is automatically elected to take its place.

NEW QUESTION # 32

.....

Thanks to modern technology, learning online gives people access to a wider range of knowledge, and people have got used to convenience of electronic equipment. As you can see, we are selling our CCAAK learning guide in the international market, thus there are three different versions of our CCAAK exam materials which are prepared to cater the different demands of various people. We here promise you that our CCAAK Certification material is the best in the market, which can definitely exert positive effect on your study. Our Confluent Certified Administrator for Apache Kafka learn tool create a kind of relaxing leaning atmosphere that improve the quality as well as the efficiency, on one hand provide conveniences, on the other hand offer great flexibility and mobility for our customers. That's the reason why you should choose us.
