

# Quiz RedHat - Accurate EX380 - Red Hat Certified Specialist in OpenShift Automation and Integration Dumps Download

With the increasing marketization, the product experience marketing has been praised by the consumer market and the industry. Attract users interested in product marketing to know just the first step, the most important is to be designed to allow the user to try before buying the Red Hat Certified Specialist in OpenShift Automation and Integration study training dumps, so we provide free pre-sale experience to help users to better understand our products. The user only needs to submit his E-mail address and apply for free trial online, and our system will soon send free demonstration research materials of EX380 Latest Questions to download. If the user is still unsure which is best for him, consider applying for a free trial of several different types of test materials. It is believed that through comparative analysis, users will be able to choose the most satisfactory EX380 test guide.

Never say you can not do it. This is my advice to everyone. Even if you think that you can not pass the demanding RedHat EX380 exam. You can find a quick and convenient training tool to help you. TestInsides's RedHat EX380 exam training materials is a very good training materials. It can help you to pass the exam successfully. And its price is very reasonable, you will benefit from it. So do not say you can't. If you do not give up, the next second is hope. Quickly grab your hope, it's in the TestInsides's RedHat EX380 Exam Training materials.

## RedHat EX380 New APP Simulations, Books EX380 PDF

EX380 certification can demonstrate your mastery of certain areas of knowledge, which is internationally recognized and accepted by the general public as a certification. EX380 certification is so high that it is not easy to obtain it. It requires you to invest time and energy. If you are not sure whether you can strictly request yourself, our EX380 test materials can help you. With high pass rate of our EX380 exam questions as more than 98%, you will find that the EX380 exam is easy to pass.

## RedHat Red Hat Certified Specialist in OpenShift Automation and Integration Sample Questions (Q18-Q23):

### NEW QUESTION # 18

GitOps and MachineConfig - Push MachineConfig to Git

### Answer:

Explanation:

See the solution below in Explanation:

Explanation:

Step 1: Make sure the MachineConfig YAML has already been created or modified in the local Git repository.

This Task assumes the file change is ready to be committed.

Step 2: Run the command:

```
git commit -am "Add MachineConfig for motd" && git push origin main
```

Step 3: Verify the commit succeeds and the push goes to the main branch.

The lab output shows:

```
[main 8d32a1] Add MachineConfig for motd
```

Detailed explanation:

This Task is part of a GitOps workflow. Instead of manually applying changes directly to the cluster, the desired configuration is stored in Git, and a GitOps controller such as Argo CD synchronizes the cluster to match the repository state. The command commits all tracked modified files with the message Add MachineConfig for motd and then pushes the change to the main branch. In this model, Git becomes the source of truth. A MachineConfig is typically used to manage node-level operating system configuration in OpenShift, so pushing it through GitOps ensures the change is auditable, repeatable, and reconciled declaratively. If the commit does not include the intended YAML, the synchronization mechanism will not apply the desired change.

### NEW QUESTION # 19

Add a second Identity Provider (HTPasswd) alongside LDAP

Task Information : Configure multiple identity providers by adding an HTPasswd IDP without removing the existing LDAP IDP.

**Answer:**

Explanation:

See the solution below in Explanation:

Explanation:

- \* Create a local htpasswd file with a test user
  - \* `htpasswd -c -B -b /tmp/htpass.txt testuser RedHat123!`
  - \* `-c` creates a new file (use only once).
  - \* `-B` uses bcrypt hashing (recommended).
  - \* `-b` supplies password non-interactively (good for labs).
  - \* Create the HTPasswd secret in openshift-config
  - \* `oc -n openshift-config create secret generic htpass-secret --from-file=htpasswd=/tmp/htpass.txt`
  - \* OAuth reads the htpasswd key from this secret.
  - \* Edit OAuth and add the HTPasswd provider (keep LDAP intact)
  - \* `oc edit oauth cluster`
- Add another entry under `spec.identityProviders`:
- `name: local-htpasswd`
  - `mappingMethod: claim`
  - `type: HTPasswd`
  - `htpasswd:`
  - `fileData:`
  - `name: htpass-secret`
- \* This adds a second login option while preserving LDAP.
  - \* Restart OAuth pods
  - \* `oc -n openshift-authentication delete pod -l app=oauth-openshift`
  - \* Ensures the updated list of identity providers is loaded.
  - \* Verify login works for htpasswd user
  - \* Log in via console using testuser.
  - \* Confirm the user is created:
  - \* `oc get user testuser`

### NEW QUESTION # 20

Spread replicas using podAntiAffinity

Task Information : Configure payments/api to prefer scheduling pods on different nodes.

**Answer:**

Explanation:

See the solution below in Explanation:

Explanation:

```
* Patch deployment with preferred podAntiAffinity
* oc -n payments patch deploy api --type=merge -p '{
* "spec":{"template":{"spec":{"affinity":{"
* "podAntiAffinity":{"
* "preferredDuringSchedulingIgnoredDuringExecution":[{"
* "weight":100,
* "podAffinityTerm":{"
* "labelSelector":{"matchLabels":{"app":"api"}},
* "topologyKey":"kubernetes.io/hostname"
* }
* }]}
* }
* }
* }
* }'
```

\* Encourages spread across nodes to reduce single-node impact.  
\* Verify spread  
\* oc -n payments get pods -o wide

## NEW QUESTION # 21

Backup and Restore - Fix SCC for Restored Application

**Answer:**

Explanation:

See the solution below in Explanation:

Explanation:

Step 1: Identify the application namespace after restore.

The lab shows the namespace as my-app-namespace.

Step 2: Run the SCC assignment command:

```
oc adm policy add-scc-to-user anyuid -z default -n my-app-namespace
```

Step 3: Confirm the role binding is applied.

The lab output shows:

```
clusterrole.rbac.authorization.k8s.io/systemopenshift:scc:anyuid added: "default" Detailed explanation:
```

After a restore, the application may fail if its pods require a security context not permitted by the default SCC allocation. This command grants the anyuid SCC to the default service account in the my-app-namespace project. The -z default syntax targets the default service account, which many restored workloads use if no custom service account is defined. The anyuid SCC allows containers to run with arbitrary user IDs, which some legacy or prebuilt images require. In OpenShift, SCC mismatches commonly cause pods to remain in pending or crash-related states. Assigning the proper SCC resolves those admission issues so workloads can start successfully. This step is therefore a post-restore operational fix to align security policy with application requirements.

## NEW QUESTION # 22

Configure log forwarding to an external endpoint

Task Information : Configure Cluster Logging to forward application logs to an external output using ClusterLogForwarder.

**Answer:**

Explanation:

See the solution below in Explanation:

Explanation:

```
* Verify logging namespace and resources
* oc get ns openshift-logging
* oc -n openshift-logging get clusterlogforwarder
* ClusterLogForwarder configures pipelines and outputs.
* Create/Edit ClusterLogForwarder (example structure)
* Define an output (external system) and pipeline selecting application logs.
* Apply via YAML:
```

- \* oc -n openshift-logging apply -f clusterlogforwarder.yaml
- \* Validate collector pods are healthy
- \* oc -n openshift-logging get pods
- \* Forwarding relies on collectors (vector/fluentd depending config).
- \* Generate a test log line
- \* oc -n openshift-logging run logger --image=busybox --restart=Never -- /bin/sh -c 'echo hello- forwarding; sleep 5'
- \* This creates a known message to search in the external endpoint.
- \* Confirm logs arrive at destination
- \* Use your external system's query/search to confirm hello-forwarding.

## NEW QUESTION # 23

.....

Nowadays the competition in the job market is fiercer than any time in the past. If you want to find a good job, you must own good competences and skillful major knowledge. So owning the RedHat certification is necessary for you because we will provide the best study materials to you. Our RedHat exam torrent is of high quality and efficient, and it can help you pass the test successfully. Our company is responsible for our study materials. Every product TestInsides have sold to customer will enjoy considerate after-sales service. If you have problems about our EX380 Study Materials such as installation, operation and so on, we will quickly reply to you after our online workers have received your emails. We are not afraid of troubles. We warmly welcome to your questions and suggestions. We sincerely hope we can help you solve your problem.

**EX380 New APP Simulations:** <https://www.testinsides.top/EX380-dumps-review.html>

Generally speaking, the pass rate in the years after our EX380 exam training vce has come out stays as high as 98% to 99%, being an undefeated myth in the history of exam files, So please make sure you fill the right email address so that you can receive our EX380 dumps guide materials immediately, RedHat EX380 Dumps Download As for this point, our workers are always online.

In fact, many assume that Remote Desktop's only real use EX380 is to remotely monitor or control Mac workstations and servers, private VertexBuffer vb = null, Generally speaking, the pass rate in the years after our EX380 Exam Training vce has come out stays as high as 98% to 99%, being an undefeated myth in the history of exam files.
