Cisco Designing Cisco Security Infrastructure Sample Questions (Q20-Q25):

NEW QUESTION # 20
In preparation for an upcoming security audit, a metal production company decided to enhance the security of container-based services running in a Kubernetes environment. The company wants to ensure that all communications between applications and services are encrypted. The administrator plans to implement mTLS service between application and services to secure the data exchanges. Given the need to manage encryption at scale and maintain efficient communication across the cluster, which network transport technology must be employed?

- A. load balancing
- B. Kubernetes network policies
- C. Service Mesh
- D. ingress controller

Answer: C

Explanation:
A Service Mesh provides built-in support for mutual TLS (mTLS) between microservices, ensuring encrypted communication at scale in Kubernetes environments. It also centralizes management of certificates, keys, and security policies, making it the right choice for securing data exchanges across the cluster.

NEW QUESTION # 21
What is the primary benefit of conducting a root cause analysis after a security incident?

- A. Validate OSI model compliance
- B. Improve FTP throughput
- C. Drive design improvements to prevent recurrence
- D. Enable compliance with NTP standards

Answer: C

Explanation:
Root cause analysis focuses on identifying the underlying cause of a security incident. This enables organizations to improve system design, controls, or processes so that similar incidents do not happen again, rather than only fixing symptoms.

NEW QUESTION # 22
How does a SOC leverage flow collectors?

- A. It provides real time content filtering.
- B. It performs load balancing capabilities across systems to optimize performance.
- C. It provides data for analysis in threat detection and response system.
- D. It performs data backup and recovery.

Answer: C

Explanation:
A flow collector gathers metadata about network traffic (such as NetFlow or IPFIX), which SOC analysts use to analyze communication patterns. This data is critical for threat detection and response, helping identify anomalies, lateral movement, or potential attacks.

NEW QUESTION # 23
Which design policy addresses harmful content creation by generative AI?

- A. human in the loop
- B. retrieval augmented generation
- C. watermarking
- D. quantum resistant encryption

Answer: C

Explanation:
Watermarking is a generative AI design policy that embeds hidden identifiers into AI-generated content. This helps address the risk of harmful content creation by enabling traceability and accountability, making it easier to detect and regulate malicious or misleading AI outputs.

NEW QUESTION # 24
Which two controls help detect drift in IaC-managed infrastructure? (Choose two.)

- A. Continuous configuration monitoring
- B. DHCP snooping
- C. Manual change log entries
- D. Immutable infrastructure patterns

Answer: A,D

Explanation:
Continuous configuration monitoring detects deviations from IaC definitions, while immutable infrastructure minimizes drift by replacing resources instead of modifying them in place.
