So, they are specified as one of the most successful SAFe-POPM practice materials in the line. They can renew your knowledge with high utility with Favorable prices. So, they are reliably rewarding SAFe-POPM practice materials with high utility value.

Scrum SAFe Product Owner/Product Manager POPM (6.0) Sample Questions (Q38-Q43):

NEW QUESTION # 38

Which Product Owner responsibility supports the team with value delivery?

- A. Testing benefit hypotheses
- B. Understanding market forces
- C. Supporting the Architectural Runway
- **D. Fostering Built-in Quality**

Answer: D

Explanation:

Explanation

Fostering Built-in Quality is a Product Owner responsibility that supports the team with value delivery.

Built-in Quality is one of the four core values of SAFe® and it means that every aspect of the solution is continuously verified for quality¹. The Product Owner fosters Built-in Quality in the following ways:

*Collaborating with the Development team and other stakeholders to define clear and testable acceptance criteria for each work item².

*Participating in team events such as Iteration Planning, Backlog Refinement, and Iteration Review to provide feedback and guidance on the quality of the work².

*Reviewing and approving the work items that meet the Definition of Done and the acceptance criteria².

*Encouraging the team to apply Agile testing practices such as Test-First, Test-Driven Development, and Behavior-Driven Development³.

*Supporting the team's continuous integration and continuous delivery practices to ensure fast and frequent feedback on the quality of the solution³.

Some additional information that might be helpful for you are:

*The other options (A, B, and C) are not Product Owner responsibilities that support the team with value delivery, but rather responsibilities that belong to other roles or activities.

*Understanding market forces is a responsibility of Product Management, who is accountable for the market and business aspects of the solution⁴.

*Supporting the Architectural Runway is a responsibility of System Architects/Engineers, who provide technical guidance and enablement to the teams.

*Testing benefit hypotheses is an activity that occurs in the Continuous Exploration step of the Continuous Delivery Pipeline, where Product Owners and Product Managers collaborate to validate their assumptions about the customer and the solution.

NEW QUESTION # 39

Which statement describes a mitigated ART PI Risk?

- A. The risk has been addressed and is no longer a concern
- **B. There is a strategy to adjust the plan as necessary**
- C. Someone has taken the responsibility of the risk
- D. Nothing more can be done, so if a risk occurs, release may be compromised

Answer: B

Explanation:

Explanation

A mitigated ART PI Risk is one that has an agreed-upon plan for alleviation, which may involve changing the scope, schedule, or resources of the PI. This reduces the impact or likelihood of the risk, but does not eliminate it completely

NEW QUESTION # 40

What is one characteristic of writing effective PI Objectives?

- **A. Describing the value**
- B. Including critical Stories
- C. Identifying significant risks
- D. Listing out committed Features

Answer: A

Explanation:

One characteristic of writing effective PI Objectives is describing the value that the objectives will deliver to the customers and stakeholders. PI Objectives are a summary of the business and technical goals that the Agile Release Train (ART) intends to achieve in the upcoming Program Increment (PI)¹. They are not just a list of features or stories, but rather a statement of the outcomes and benefits that the features or stories will provide². By describing the value, the PI Objectives help align the teams and stakeholders to a shared vision and mission, and provide a basis for measuring the progress and performance of the ART³.

NEW QUESTION # 41

What is one step when determining initial team capacity during PI Planning?

- A. Ensure Product Owner/Product Manager approval for all time-based capacity adjustments
- B. Add together all of the points from recently completed Features
- C. Compare final team capacity across all teams
- D. Subtract one point for every team member 's vacation day, public holiday, or training day

Answer: D

Explanation:

One step when determining initial team capacity during PI Planning is to subtract one point for every team member's vacation day, public holiday, or training day. This step helps the team to adjust their capacity based on the actual availability of each team member for the upcoming Program Increment (PI)¹. By accounting for the time-based capacity adjustments, the team can plan their work more realistically and avoid overcommitting or underdelivering².

NEW QUESTION # 42

What can increase the effectiveness of Backlog Refinement?

- A. Refine Stories during Iteration Planning
- B. Schedule the event on a regular cadence
- C. Include a few team members
- D. Have separate meetings with subject matter experts

Answer: B

Explanation:

One of the factors that can increase the effectiveness of Backlog Refinement is to schedule the event on a regular cadence. Backlog Refinement is the process of reviewing, updating, and prioritizing the backlog items to prepare them for future iterations or sprints¹. By scheduling the event on a regular cadence, such as once or twice per week, the team can ensure that the backlog is always accurate, relevant, and ready for planning². A regular cadence also helps the team to avoid cramming too much work into a single session, which can lead to lower quality and reduced collaboration³.
