Our products boost 3 versions and varied functions. The 3 versions include the PDF version, PC version, APP online version. You can use the version you like and which suits you most to learn our D-ISM-FN-01 study materials. The 3 versions support different equipment and using method and boost their own merits and functions. For example, the PC version supports the computers with Window system and can stimulate the real exam. Our products also boost multiple functions which including the self-learning, self-evaluation, statistics report, timing and stimulation functions. Each function provides their own benefits to help the clients learn the D-ISM-FN-01 Study Materials efficiently. For instance, the self-learning and self-evaluation functions can help the clients check their results of learning the Dell Information Storage and Management Foundations v2 Exam study materials.

In the modern world, obtaining D-ISM-FN-01 certification is essential. With the growing popularity of EMC, the demand for professionals holding this Dell Information Storage and Management Foundations v2 Exam (D-ISM-FN-01) certification holders has increased significantly. Unfortunately, many candidates fail to pass the D-ISM-FN-01 Exam due to outdated Dell Information Storage and Management Foundations v2 Exam (D-ISM-FN-01) exam study material. Such failure can lead to the loss of time, money, and confidence.

Get Ahead in Your Career with EMC D-ISM-FN-01 Questions from TrainingDumps

For your convenience, TrainingDumps has prepared authentic EMC D-ISM-FN-01 Exam study material based on a real exam syllabus to help candidates go through their exams. Candidates who are preparing for the EMC exam suffer greatly in their search for preparation material.

EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q41-Q46):

NEW QUESTION # 41

Question:

A Fibre Channel switch has eight ports, and all ports must be operational from 6 AM to 6 PM, Monday through Friday. However, a failure of Port 4 occurs within the week as follows:

- * Monday: 11 AM to 1 PM
 - * Wednesday: 5 PM to 10 PM
 - * Thursday: 7 AM to 10 AM
 - * Saturday: 11 AM to 1 PM
- What is the availability of Port 4 in that week?

- A. 86.7%
- B. 81.6%
- C. 90%
- D. 80%

Answer: A

Explanation:

Total operational hours required: 12 hours/day × 5 days = 60 hours

Total downtime during required hours:

* Monday: 2 hours

* Wednesday: 1 hour (only 5 PM to 6 PM counts)

NEW QUESTION # 42

Question:

What is the first step in a machine learning process?

- A. Collecting the datasets
- B. Selecting the type of learning
- C. Training the model
- D. Analyzing the data

Answer: A

Explanation:

Collecting the datasets is the first step in any machine learning (ML) process. Without data, the ML system cannot function. Steps include:

1##Collecting datasets: Gathering data relevant to the problem to train and validate the ML model.

2##Analyzing data: Cleaning and exploring data for patterns.

3##Selecting learning type: Deciding between supervised, unsupervised, or reinforcement learning.

4##Training the model: Using the data to build predictive models.

NEW QUESTION # 43

Question:

What type of disk devices are the highest performing and most expensive of all disk devices?

- A. SCM
- B. SAS
- C. FC
- D. SSD
- E. SATA

Answer: A

Explanation:

Storage Class Memory (SCM) represents a new class of storage technology that bridges the gap between traditional DRAM and NAND flash memory. SCM offers significantly lower latency and higher endurance compared to NAND flash, making it the highest-performing storage medium currently available. Due to its advanced technology and performance characteristics, SCM is also the most expensive among the listed options.

* FC (Fibre Channel): A network protocol used for high-speed data transfer, not a type of disk device.

* SATA (Serial ATA): Commonly used in consumer-grade storage; offers lower performance and cost.

* SAS (Serial Attached SCSI): Offers better performance than SATA but still lags behind SSDs and SCM.

* SSD (Solid State Drive): Provides faster data access than HDDs but is outperformed by SCM.

* SCM (Storage Class Memory): Combines the speed of DRAM with the persistence of NAND, offering unparalleled performance.

NEW QUESTION # 44

Question:

Which statement defines the limitation of Native NVMe?

- A. It requires 10 Gigabit or greater Ethernet LANs with TCP.
- **B. It cannot connect to NVM storage devices outside of the server.**
- C. It requires a 32 Gb/s Fibre Channel to work.
- D. It can only deliver high shared storage performance through Fibre Channel.

Answer: B

Explanation:

Native NVMe is a protocol designed for direct-attached storage (DAS) environments. It allows a host to communicate with NVM storage devices (like NVMe SSDs) within the same server.

Limitation: Native NVMe does not support external NVMe storage connectivity beyond the server.

To connect to external shared NVMe storage, protocols like NVMe over Fabrics (NVMe-oF) are used.

NEW QUESTION # 45

Question:

What is an advantage of deploying intelligent storage systems in the data center?

- A. Migrates data from a data center to the cloud at no cost
- B. Reduces the complexity of managing information by creating silos of storage
- C. Reduces the amount of data to replicate, migrate, and back up
- **D. Enables efficient and optimized storage and management of information**

Answer: D

Explanation:

Intelligent storage systems incorporate advanced features like automated tiering, deduplication, and compression. These features enable efficient storage utilization and optimized management by automating data placement and reducing manual intervention.

* Option A: While intelligent systems may facilitate cloud integration, they do not guarantee cost-free migration.

* Option B: Data reduction features help, but the primary advantage is broader efficiency and optimization.

* Option C: Creating silos increases complexity; intelligent systems aim to unify and simplify storage management.
