100% Pass Fortinet Realistic NSE7_OTS-7.2 Practice Online

The crucial thing when it comes to appearing a competitive exam like NSE7_OTS-7.2 knowing your problem-solving skills. And to do that you are going to need help from a NSE7_OTS-7.2 practice questions or braindumps. This is exactly what is delivered by our NSE7_OTS-7.2 test materials. The NSE7_OTS-7.2 Exam Dumps cover every topic of the actual Fortinet certification exam. The NSE7_OTS-7.2 exam questions are divided into various groups and the candidate can solve these questions to test his skills and knowledge.

Fortinet NSE7_OTS-7.2 (Fortinet NSE 7 - OT Security 7.2) Certification Exam is a professional certification exam designed for individuals who want to demonstrate their skills and expertise in securing operational technology (OT) networks. Fortinet NSE 7 - OT Security 7.2 certification exam is one of the most popular certifications in the field of cybersecurity, and it is recognized globally as a benchmark for excellence in OT security.

Fortinet NSE 7 - OT Security 7.2 Sample Questions (Q18-Q23):

NEW QUESTION # 18
Refer to the exhibit.

An operational technology rule is created and successfully activated to monitor the Modbus protocol on FortiSIEM. However, the rule does not trigger incidents despite Modbus traffic and application logs being received correctly by FortiSIEM.
Which statement correctly describes the issue on the rule configuration?

- A. The SubPattern is missing the filter to match the Modbus protocol.
- B. The first condition on the SubPattern filter must use the OR logical operator.
- C. The attributes in the Group By section must match the ones in Fitters section.
- D. The Aggregate attribute COUNT expression is incompatible with the filters.

Answer: C

NEW QUESTION # 19

Refer to the exhibits.

Which statement is true about the traffic passing through to PLC-2?

- A. IEC 104 signatures are all allowed except the C.BO.NA 1 signature.
- B. The application filter overrides the default action of some IEC 104 signatures.
- C. IPS must be enabled to inspect application signatures.
- D. SSL Inspection must be set to deep-inspection to correctly apply application control.

Answer: B

NEW QUESTION # 20
What is the primary objective of implementing SD-WAN in operational technology (OT) networks'?

- A. Reduce security risk and threat attacks
- B. Enhance network performance of OT applications
- C. Replace standard links with lower cost connections
- D. Remove centralized network security policies

Answer: B

NEW QUESTION # 21
As an OT administrator, it is important to understand how industrial protocols work in an OT network.
Which communication method is used by the Modbus protocol?

- A. It uses OSI Layer 2 and the secondary device sends data based on request from primary device.
- B. It uses OSI Layer 2 and the primary device sends data based on request from secondary device.

- C. It uses OSI Layer 2 and both the primary/secondary devices send data based on a matching token ring.
- D. It uses OSI Layer 2 and both the primary/secondary devices always send data during the communication.

Answer: A

NEW QUESTION # 22
What are two benefits of a Nozomi integration with FortiNAC? (Choose two.)

- A. Adapter consolidation for multi-adapter hosts
- B. Importation and classification of hosts
- C. Direct VLAN assignment
- D. Enhanced point of connection details

Answer: A,B

Explanation:
The two benefits of a Nozomi integration with FortiNAC are enhanced point of connection details and importation and classification of hosts. Enhanced point of connection details allows for the identification and separation of traffic from multiple points of connection, such as Wi-Fi, wired, cellular, and VPN. Importation and classification of hosts allows for the automated importing and classification of host and device information into FortiNAC. This allows for better visibility and control of the network.
