JN0-336 Study Prep Materials Has Gained Wide Popularity among Different Age Groups - Test4Cram

Our Test4Cram offers you the high-quality JN0-336 exam dumps and answers, and make you be closer to success. If you are still worried, you can download JN0-336 exam dumps' free demo and answers on probation on Test4Cram.COM. We promise, when you purchase JN0-336 Exam Dumps and answers, we will also provide one year free renewal service for you.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q25-Q30):

NEW QUESTION # 25

Which two statements about the DNS ALG are correct? (Choose two.)

- A. The DNS ALG supports VPN tunnels.
- B. The DNS ALG supports DDNS.
- C. The DNS ALG does not support NAT.
- D. The DNS ALG performs DNS doctoring.

Answer: A,D

Explanation:

The DNS Application Layer Gateway (ALG) is designed to manage and facilitate the successful passage of DNS traffic through a network device such as a firewall or NAT. Here are the correct statements regarding DNS ALG:

The DNS ALG performs DNS doctoring.

DNS doctoring is indeed a function of the DNS ALG where it modifies the payload of DNS responses to ensure that the information is aligned with the NAT policy. For example, it can rewrite the IP addresses in DNS responses to match the internal or external NAT'd IP address that the client should use.

The DNS ALG supports VPN tunnels.

DNS ALG can function across VPN tunnels by managing DNS traffic that traverses the tunnel, ensuring that the DNS queries and responses are correctly handled in environments where IP address translation occurs due to the VPN.

NEW QUESTION # 26

You are asked to find systems running applications that increase the risks on your network. You must ensure these systems are processed through IPS and Juniper ATP Cloud for malware and virus protection.

Which Juniper Networks solution will accomplish this task?

- A. UTM
- B. JIMS
- C. Adaptive Threat Profiling
- D. Encrypted Traffic Insights

Answer: C

Explanation:

Adaptive Threat Profiling (ATP) is a Juniper Networks solution that enables organizations to detect malicious activity on their networks and process it through IPS and Juniper ATP Cloud for malware and virus protection. ATP is powered by Juniper's advanced Machine Learning and Artificial Intelligence (AI) capabilities, allowing it to detect and block malicious activity in real-time. ATP is integrated with Juniper's Unified Threat Management (UTM) and Encrypted Traffic Insights (ETI) solutions, providing an end-to-end network protection solution.

NEW QUESTION # 27

On which three Hypervisors is vSRX supported? (Choose three.)

- A. Oracle VM
- B. KVM
- C. Hyper-V
- D. Citrix Hypervisor
- E. VMware ESXi

Answer: B,C,E

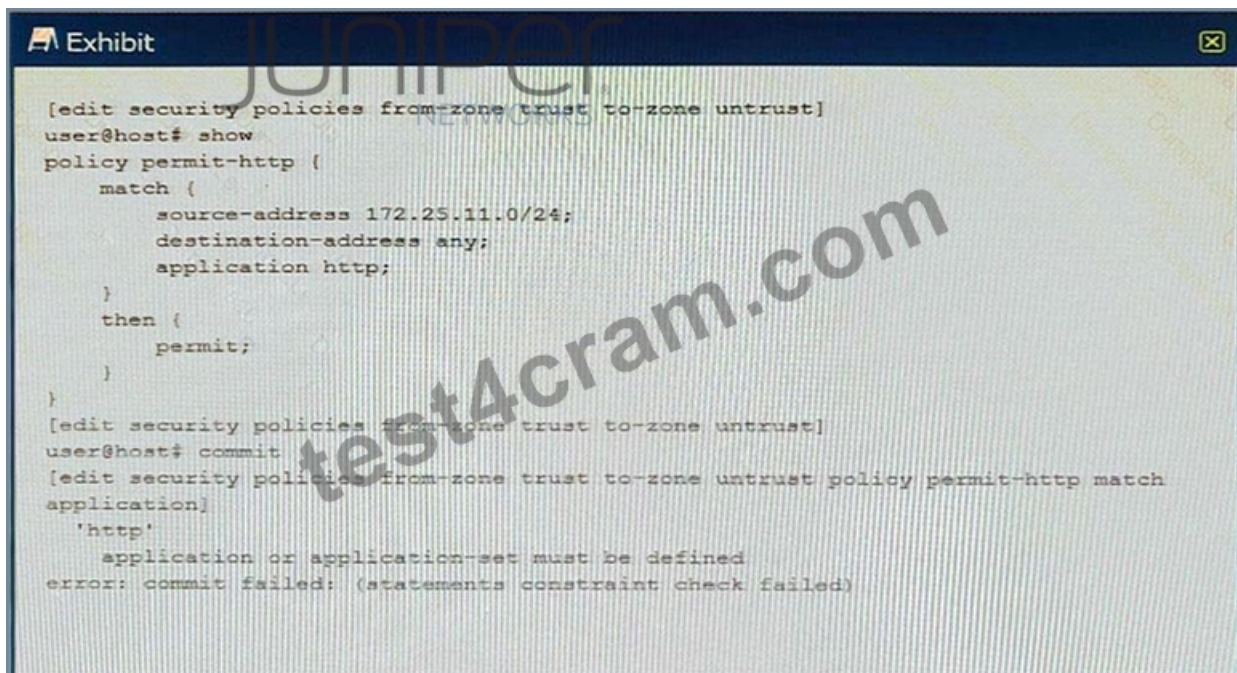

Explanation:

vSRX is a virtual firewall that runs as a software instance on a hypervisor. A hypervisor is a software layer that allows multiple virtual machines to run on a single physical host. vSRX supports three hypervisors: VMware ESXi, Hyper-V, and KVM. VMware ESXi is a hypervisor that runs on x86 servers and supports various operating systems and applications. Hyper-V is a hypervisor that runs on Windows Server and supports Windows and Linux virtual machines. KVM (Kernel-based Virtual Machine) is a hypervisor that runs on Linux and supports Linux, Windows, and other operating systems.

NEW QUESTION # 28

Exhibit

```
[edit security policies from-zone trust to-zone untrust]
user@host# show
policy permit-http {
    match {
        source-address 172.25.11.0/24;
        destination-address any;
        application http;
    }
    then {
        permit;
    }
}
[edit security policies from-zone trust to-zone untrust]
user@host# commit
[edit security policies from-zone trust to-zone untrust policy permit-http match
application]
'http'
    application or application-set must be defined
error: commit failed: (statements constraint check failed)
```

You are trying to create a security policy on your SRX Series device that permits HTTP traffic from your private 172.25.11.0/24 subnet to the Internet. You create a policy named permit-http between the trust and untrust zones that permits HTTP traffic. When you issue a commit command to apply the configuration changes, the commit fails with the error shown in the exhibit. Which two actions would correct the error? (Choose two.)

- A. Create a custom application named http at the [edit applications] hierarchy.
- B. Execute the Junos commit full command to override the error and apply the configuration.
- C. Issue the rollback 1 command from the top of the configuration hierarchy and attempt the commit again.
- D. Modify the security policy to use the built-in Junos-http applications.

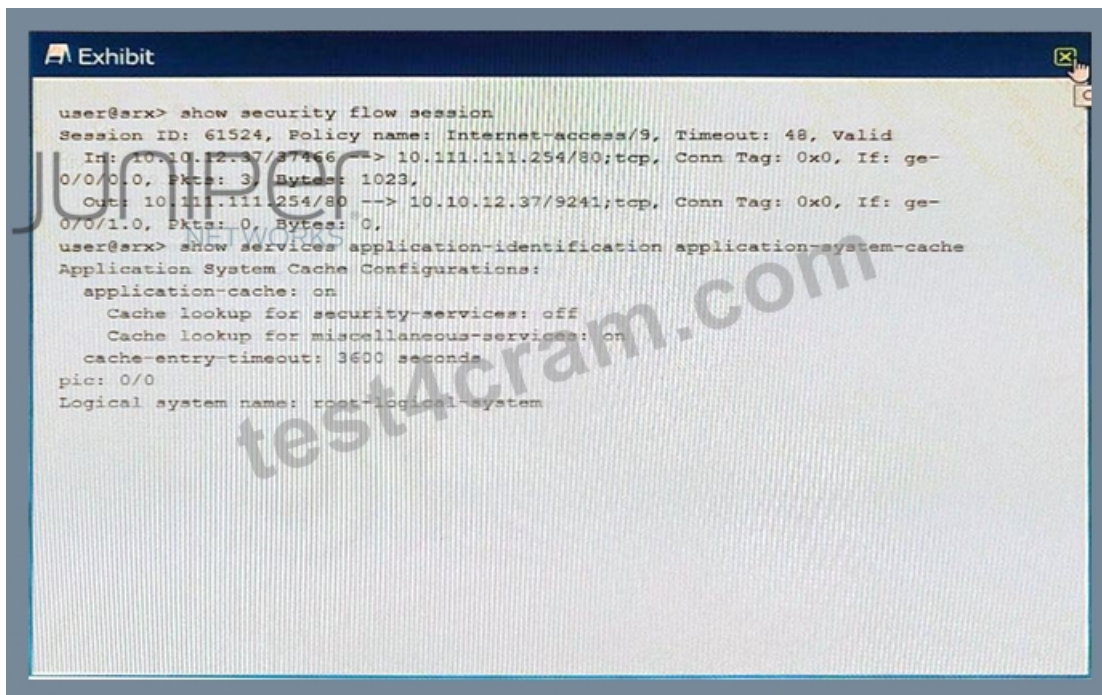

Answer: A,D

Explanation:

The error message indicates that the Junos-http application is not defined, so you need to either create a custom application or modify the security policy to use the built-in Junos-http application. Doing either of these will allow you to successfully commit the configuration.

NEW QUESTION # 29

Exhibit

The image shows a terminal window titled 'Exhibit' with a Juniper Networks logo. It displays the output of two CLI commands. The first command is 'show security flow session', which shows a session ID of 61524, policy name 'Internet-access/9', and a timeout of 48. It details the flow from an internal IP (10.10.12.37) to an external IP (10.111.111.254) on port 80. The second command is 'show services application-identification application-system-cache', which shows that the application cache is on, cache lookup for security services is off, and the cache entry timeout is 3600 seconds. A large watermark 'test4cram.com' is visible across the terminal output.

```
user@arx> show security flow session
Session ID: 61524, Policy name: Internet-access/9, Timeout: 48, Valid
  In: 10.10.12.37/87466 --> 10.111.111.254/80;tcp, Conn Tag: 0x0, If: ge-
0/0/0.0, Pkts: 3, Bytes: 1023,
  Out: 10.111.111.254/80 --> 10.10.12.37/9241;tcp, Conn Tag: 0x0, If: ge-
0/0/1.0, Pkts: 0, Bytes: 0,
user@arx> show services application-identification application-system-cache
Application System Cache Configurations:
  application-cache: on
    Cache lookup for security-services: off
    Cache lookup for miscellaneous-services: on
  cache-entry-timeout: 3600 seconds
pic: 0/0
Logical system name: root-logical-system
```

Referring to the exhibit which statement is true?

- A. SSL proxy functions will ignore the session.
- B. SSL proxy leverages pre-match result
- C. SSL proxy must wait for return traffic for the final match to occur.
- D. SSL proxy leverages post-match results.

Answer: C

NEW QUESTION # 30

.....

Our company is widely acclaimed in the industry, and our JN0-336 study materials have won the favor of many customers by virtue of their high quality. Started when the user needs to pass the qualification test, choose the JN0-336 study materials, they will not have any second or even third backup options, because they will be the first choice of our practice exam materials. Our JN0-336 Study Materials are devoted to research on which methods are used to enable users to pass the test faster.
