Salesforce OmniStudio Developer certification exam covers a range of topics, including data modeling, application development, process automation, user interface design, and security. Candidates are expected to have a deep understanding of the platform's core features and functionalities and demonstrate their ability to leverage them to create custom applications. OmniStudio-Developer Exam consists of 60 multiple-choice questions and lasts for 105 minutes. Candidates must achieve a passing score of 68% or higher to earn the certification.

Salesforce Certified OmniStudio Developer Sample Questions (Q65-Q70):

NEW QUESTION # 65

A developer needs to use the COUNTIF function to process data entered by the user in an OmniScript. The output of the function needs to be displayed to the user immediately in the current step. Based on best practice, which element should the developer use this function in?

- A. Set Values element
- B. Range element
- C. Formula element

Answer: C

Explanation:

In OmniScripts, if you need to apply a function (like COUNTIF) to dynamic data and show the result immediately, the Formula element is the correct choice.

* B. Formula element - The Formula element supports real-time calculation using OmniStudio expression functions (like COUNTIF, SUM, etc.) and updates values instantly on the screen without the need for server calls.

Incorrect Options:

* A. Set Values element is used to set static or conditional values but doesn't support formula evaluation.

* C. Range element is used for value comparisons and conditions, not for calculations.

:

Salesforce OmniStudio Developer Guide # OmniScript Formula Element

NEW QUESTION # 66

Refer to the exhibit.

What JSON code correct represent the step in the OmniScript Structure panel shown?

- A.

- B.

```

"Step1": {
  "Block1": {
    "Text1": "Text",
    "Telephone1": "1234567890",
    "Block2": {
      "Checkbox1": false
    }
  }
  "Block3": {
    "Multi-select1": "Value A;Value B"
  }
}

```

- C.
- D.

```

"Block1": {
  "Text1": "Text "
},
"Block2": {
  "Telephone1": "1234567890 ",
  "Checkbox1": false,
  "Block3": {
    "Multi - select1": "Value A;Value B "
  }
}

```

Answer: C

Explanation:

According to the OmniScript Data JSON page, the OmniScript structure JSON defines the data elements and their properties that are used in an OmniScript. The exhibit shows an OmniScript structure JSON with three elements: Step, Block, and Telephone. The Step element is an empty object, the Block element is an object with two properties: Text and Telephone, and the Telephone element is a string. Therefore, the JSON code that correctly represents the step in the OmniScript Structure panel shown is option C, which has the following structure:

```

{
  "Step": {},
  "Block": {
    "Text": "Text",
    "Telephone": "1234567890"
  },
  "Telephone": "1234567890"
}

```

The other options have different structures that do not match the OmniScript structure shown. Therefore, the correct answer is C.

NEW QUESTION # 67

A developer examines data received from an external data source. The data is nested two levels down in the JSON structure. Which OmniStudio tool could the developer use to simplify this data?

- **A. A DataRaptor Transform**
- B. A guided workflow
- C. An HTTP Action Element
- D. An integration Procedure

Answer: A

NEW QUESTION # 68

Users receive an APEC CPU limit Exceeded error when running an OmniScript in a Salesforce Community.

The OmniScript includes an Integration Procedure that contains two DataRaptors.

Which two Location should the developer check to troubleshoot the issue?

Choose 2 answers

- A. Community logs
- **B. DataRaptor configuration**
- **C. Action Debugger**
- D. Script configuration

Answer: B,C

NEW QUESTION # 69

Which two of these options can a developer use to retrieve data from a Salesforce object?

Choose 2 answers

- A. Data Mapper Load Action
- **B. Lookup Input Element**
- **C. Data Mapper Extract Action**
- D. Data Mapper Post Action

Answer: B,C

Explanation:

To retrieve (read) data from Salesforce objects:

* A. Data Mapper Extract Action - Correct. A DataRaptor Extract is specifically used to retrieve data from Salesforce, based on input parameters or context.

* C. Lookup Input Element - Correct. This is used within OmniScripts to look up a record by matching input data, essentially performing a read operation.

Incorrect Options:

* B. DataRaptor Post is not a valid DataRaptor type.

* D. DataRaptor Load Action is used for writing/updating data, not retrieving it.

:

Salesforce OmniStudio Guide # DataRaptor Types and Lookup Input Element Usage

NEW QUESTION # 70

.....

Experts before starting the compilation of "the OmniStudio-Developer latest questions", has put all the contents of the knowledge point build a clear framework in mind, though it needs a long wait, but product experts and not give up, but always adhere to the effort, in the end, they finished all the compilation. So, you're lucky enough to meet our OmniStudio-Developer Test Guide I, and it's all the work of the experts. If you want to pass the qualifying OmniStudio-Developer exam with high quality, choose our OmniStudio-Developer exam questions. We are absolutely responsible for you. Don't hesitate!
