

# Desktop-Based H12-821\_V1.0 Practice Exam Software - Mimics the Real Huawei Exam Environment

P.S. Free & New H12-821\_V1.0 dumps are available on Google Drive shared by Dumperleader: [https://drive.google.com/open?id=1pZesVyZrfN6mc3X\\_no79rpC8hs\\_ck8RQ](https://drive.google.com/open?id=1pZesVyZrfN6mc3X_no79rpC8hs_ck8RQ)

You can write down your doubts or any other question of our HCIP-Datacom-Core Technology V1.0 test questions. We warmly welcome all your questions. Our online workers are responsible for solving all your problems with twenty four hours service. You still can enjoy our considerate service after you have purchased our H12-821\_V1.0 test guide. If you don't know how to install the study materials, our professional experts can offer you remote installation guidance. Also, we will offer you help in the process of using our H12-821\_V1.0 Exam Questions. Also, if you have better suggestions to utilize our study materials, we will be glad to take it seriously. All of our assistance is free of charge. We are happy that our small assistance can change you a lot. You don't need to feel burdened. Remember to contact us!

Since the content of the examination is also updating daily, you will need real and latest Huawei H12-821\_V1.0 Dumps to prepare successfully for the H12-821\_V1.0 Certification Exam in a short time. People who don't study from updated H12-821\_V1.0 questions fail the examination and loss time and money.

## **H12-821\_V1.0 Valid Exam Tutorial & Latest H12-821\_V1.0 Exam Review**

If you are a busy individual, you will have a short time to sit and study properly for the H12-821\_V1.0 exam. Finding the best route to quick learning is important because you are not a genius who can cover everything before the final attempt. You have to memorize real HCIP-Datacom-Core Technology V1.0 (H12-821\_V1.0) questions that will appear in the final H12-821\_V1.0 test. In this way, you can quickly prepare for the H12-821\_V1.0 examination.

## **Huawei HCIP-Datacom-Core Technology V1.0 Sample Questions (Q135-Q140):**

### **NEW QUESTION # 135**

Which of the following situations will cause the stack standby switch to be promoted to the stack master switch? (Multiple choice)

- A. Restart from switch failure
- B. **Restart the main switch after failure**
- C. Users can perform stack smooth upgrade through commands.
- D. **The user performs active/standby switchover through commands**

**Answer: B,D**

### NEW QUESTION # 136

See the command output of a router below.

Which of the following statements is true?

```
<R2>display ospf interface GigabitEthernet 0/0/0 verbose
OSPF Process 1 with Router ID 10.0.2.2
Interface: 10.0.12.2 (GigabitEthernet 0/0/0)
Cost: 1 State: BDR Type: Broadcast MTU: 1500
Priority: 1
Designated Router: 10.0.12.1
Backup Designated Router: 10.0.12.2
Timers: Hello 1, Dead 40, Poll 120, Retransmit 5, Transmit Delay 1
```

- A. The interface IP address is 10.1.12.1.
- B. The interface cost is 1500.
- C. The router ID is 10.0.12.2.
- D. **This router is a BDR.**

**Answer: D**

Explanation:

The output shows that the router with the IP 10.0.12.2 is the Backup Designated Router (BDR), as indicated in the State: BDR field. The router ID is 10.0.2.2, the interface cost is 1, and the IP address of the interface is 10.0.12.2.

### NEW QUESTION # 137

Which of the following descriptions about OSPF DR/BDR is wrong?

- A. **In the process of DR/BDR negotiation, the routers participating in the negotiation will think that they are BDR.**
- B. If both DR/BDR elections fail, the neighbor status of both parties will remain in the 2-way state
- C. Even if the dr-priority of the two directly connected routers is set to 255, there will still be DR and BDR elected between them
- D. When the neighbor state is Init, DR/BDR will not be negotiated between routers.

**Answer: A**

### NEW QUESTION # 138

Which of the following descriptions about the DHCPv6 address allocation process is correct?

- A. If it is necessary to renew the lease of the address obtained from the DHCPv6 server, a Rebind message will be sent at T1 to request lease renewal
- B. If the DHCPv6 server receives the Rebind message from the client and the server confirms that the client can continue to use the address, it will send a Confirm message to the client to inform the client
- C. The DHCPv6 client uses the Solicit message to determine the location of the DHCPv6 server, and the destination IPv6 address of the message is FF02::1:3
- D. **The DHCPv6 server sends a Reply message carrying address and configuration information in response to the Request message received from the DHCPv6 client**

**Answer: D**

### NEW QUESTION # 139

Security policy is the core feature of firewalls. Only valid traffic that complies with security policies can be forwarded by firewalls. Which of the following statements are true about security policy matching rules?

- A. The system has a default security policy named default, where all matching conditions are any and the default action is permit.
- B. **When multiple security policy rules are configured, they are sorted in a list by configuration sequence by default. A security policy rule configured earlier is placed higher in the list and has a higher priority.**
- C. **If a security policy contains multiple matching conditions, the relationship between them is AND.**
- D. Multiple values can be configured for a single matching condition, and the values are logically ANDed.

## Answer: B,C

Explanation:

Comprehensive and Detailed Step-by-Step Explanation:

### 1. How Firewalls Match Security Policies:

Firewalls use security policies to define rules for filtering traffic.

Each policy contains matching conditions (e.g., source IP, destination IP, protocol, etc.) and an action (e.g., permit or deny).

Traffic is evaluated against these policies in sequential order, and the first matching policy is applied.

### 2. Analysis of Each Statement:

Option A: Multiple values can be configured for a single matching condition, and the values are logically ANDed.

Incorrect.

Multiple values for a single matching condition (e.g., multiple source IPs) are logically ORed, not ANDed. For example, traffic from any of the specified source IPs matches the policy.

Option B: If a security policy contains multiple matching conditions, the relationship between them is AND.

Correct.

When a policy has multiple matching conditions (e.g., source IP AND destination IP AND protocol), all conditions must be met for the policy to match.

Option C: The system has a default security policy named default, where all matching conditions are ANDed and the default action is permit.

Incorrect.

The default security policy typically denies all traffic unless explicitly permitted by user-defined policies.

Option D: When multiple security policy rules are configured, they are sorted in a list by configuration sequence by default. A security policy rule configured earlier is placed higher in the list and has a higher priority.

Correct.

Security policies are processed in sequential order based on their configuration sequence. Policies configured earlier have higher priority and are evaluated first.

### 3. Summary:

The correct statements are A and D.
